< S-band High Power GaN HEMT >

MGFS37G38L2-01

2.5 – 3.8 GHz / 5W(Psat) x 2

DESCRIPTION

The MGFS37G38L2, GaN HEMT with an N-channel Schottky gate, is designed for S-band base transmitter station applications.

FEATURES

- High Voltage Operation : VDS=50V
- High Output Power : 37dBm (typ.) @ Psat, f=3.5GHz, Single Path
- High Efficiency : 60% (typ.) @ Psat, f=3.5GHz, Single Path
- High Gain : 18dB (typ.) @ f=3.5GHz, Single Path

APPLICATION

- Amplifier for S-band Base Transmitter Station

RECOMMENDED BIAS CONDITIONS

- Vds=50V • Ids=24mA

Absolute Maximum Ratings (Case Temperature Tc=25°C)

Symbol	Parameter	Ratings	Unit
VDS	Operating Voltage	55	V
VBR	Drain-Source Voltage (V_{GS}=-5V)	150	V
VGS	Gate–Source Voltage	-15	V
PT	Total Power Dissipation	11.5	W
Pin	Maximum Input Power	27	dBm
Tch	Channel Temperature	200	°C
Tstg	Storage Temperature	-55 to +150	°C

Recommended Operating Conditions

Symbol	Parameter	Limit	Unit
VDS	Operating Voltage	≦50	V
IGF	Forward Gate Current (RG=10Ω, Single Path)	≦4.8	mA
IGR	Reverse Gate Current (RG=10Ω, Single Path)	≦0.6	mA
Tch	Channel Temperature	≦185	°C
Pave	Average Output Power (Single Path)	29	dBm

Outline Drawing [unit : mm]

Electrical Characteristics (Case Temperature Tc=25°C)

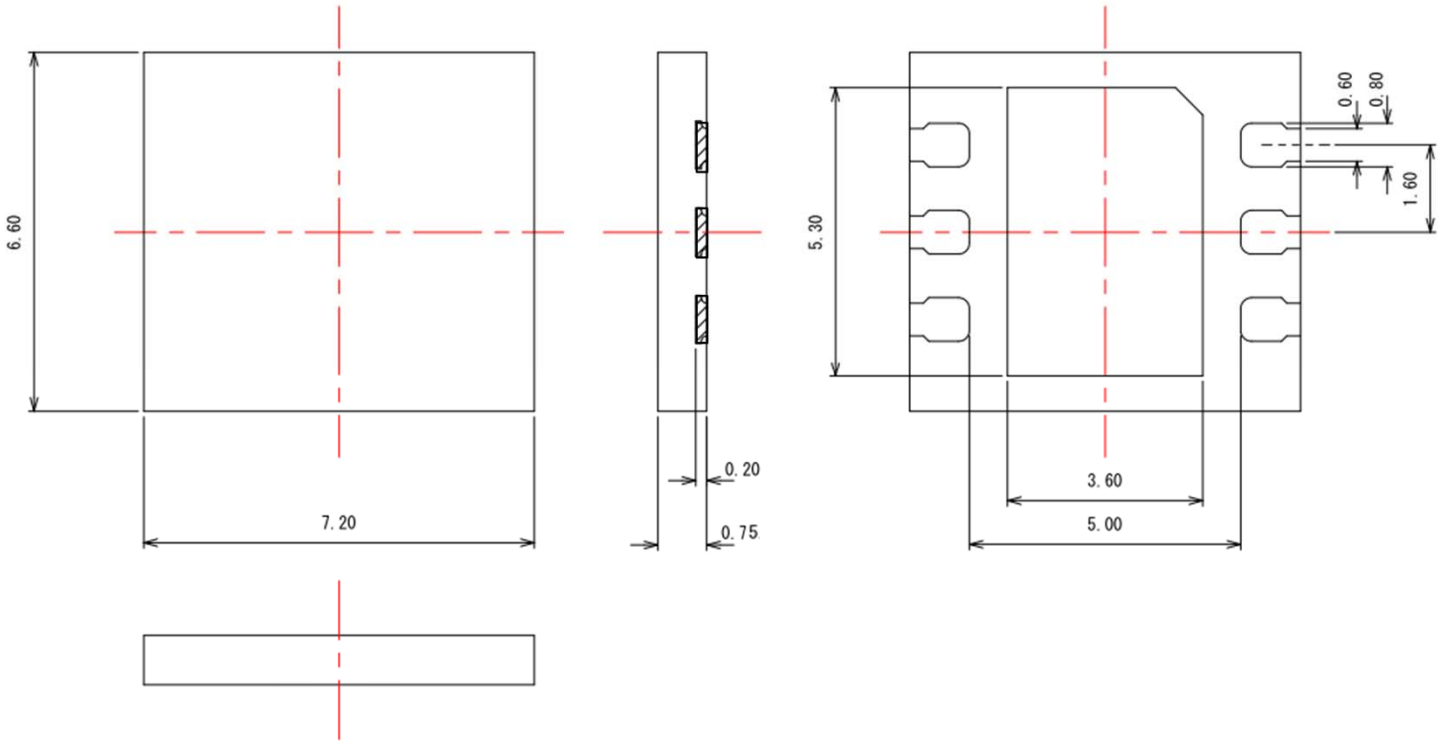
Symbol	Parameter	Test Conditions	Limits			Unit
			Min.	Typ.	Max.	
Vp	Pinch-Off Voltage	VDS = 50V, ID = 1.0mA	- 2.3	- 1.8	- 1.3	V
Psat*1	Saturated Output Power*1	VDS = 50V, ID(DC) = 24mA f=3.5GHz, Single Path, @ Psat	35.5	37.0	-	dBm
ηdmax*1	Drain Efficiency*1		-	60	-	%
Gp	Linear Power Gain	VDS = 50V, ID(DC) = 24mA f=3.5GHz, Single Path, @ Po = 29.0dBm	17	18	-	dB
ηd	Drain Efficiency		20	25	-	%
ACLR*2	Adjacent Channel Leakage Ratio*2		-	-40	-	dBc
VSWR*1	Load Mismatch Tolerance*1	VSWR=10:1, All Phases,	No Device Degradation			
Rth	Thermal Resistance	ΔVf Method, Single Path	-	-	13.5	°C/W
HBM	Human Body Model	JEDEC JESD22-A114	TBD			
CDM	Charge Device Model	JEDEC JESD22-C101	TBD			
MSL	Moisture Sensitivity Level	JEDEC J-STD-020	3			

*1 : 10%-duty RF Pulse

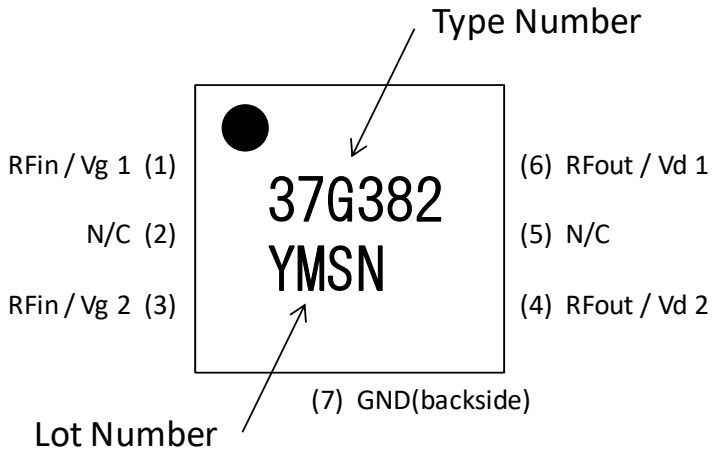
*2 : Signal condition (W-CDMA, Test Model 1 64DPCH, PAPR=7.5dB @0.01% CCDF)

PRODUCT DIMENSIONS

1. Package Drawing [unit : mm]



2. Pin Configuration and Marking



Pin Description

Pin No.	Pin Name	Function
1	RFin / Vg 1	Path 1 RF Input & Gate Voltage
2	N / C	No Function
3	RFin / Vg 2	Path 2 RF Input & Gate Voltage
4	RFout / Vd 2	Path 2 RF Output & Drain Voltage
5	N / C	No Function
6	RFout / Vd 1	Path 1 RF Output & Drain Voltage
7	GND	Ground

Symbol	Content	Description
Y	Year	This single figure shows the year when the assembly of the lot is started. The period of the year is from April to March. (e.g.) 5 -- The lot was assembled in Apr./2015 to Mar./2016
M	Month	This single figure shows the month when the assembly of the lot is started. Apr.=1, May=2, ….. Nov.=8, Dec.=9, Jan.=X, Feb.=Y, Mar.=Z
SN	Serial Number	This combination of double alphabets (expect I,O) shows the order when the assembly of the lot is started in the month.

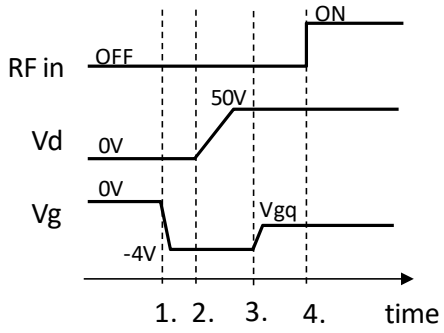
Static Electric Safety Cautions

Compared to silicon products, GaN - and GaAs - based FETs are the products that are more sensitive to the electro-static discharge (ESD). Applying ESD may lead the product to fail. Please handle the product with careful taking ESD counter measures, such as the wrist band, grounding table/floor , ionizer, etc.

Bias On/Off Sequence

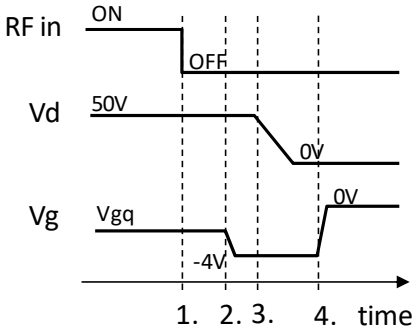
A. Bias sequence for turning on the device

1. Set gate voltage (Vg) to -4V (typically pinch-off voltage).
2. Set drain voltage (Vd) from 0V to 50V.
3. Set gate voltage (Vg) to adjust a drain current (Idq).
4. RF on



B. Bias sequence for turning off the device

1. RF off
2. Set gate voltage to -4V for drain current (Idq) of 0A.
3. Set drain voltage to 0V.
4. Set gate voltage to 0V.



Keep safety first in your circuit designs!

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

- These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
- Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
- All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
  The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.
  Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (http://www.MitsubishiElectric.com/).
- When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
- Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
- If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
  Any diversion or re-export contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
