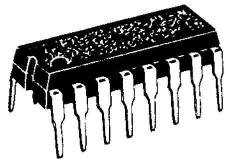
MN4049B/MN4049BS

Hex Inverting Buffer

■ Outline

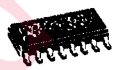
The MN4049B/S is an inversion type buffer having six circuits, and usable for logical level conversion.
Because of the large output current, it can directly drive TTL and DTL, and is also usable as an interface from CMOS to TTL since it can drive two standard TTL circuits.
The circuits structurally constituting a 3-stage inverter assure excellent switching characteristics.
This hex inverting buffer is equivalent to Motorola's MC14049BB and RCA's CD4049B.

P-3



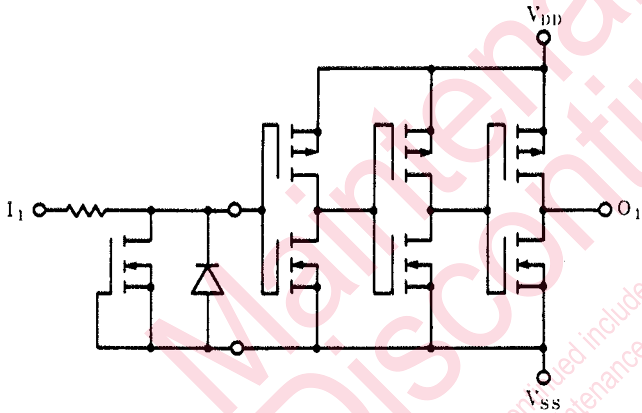
16-pin plastic DIL package

P-4

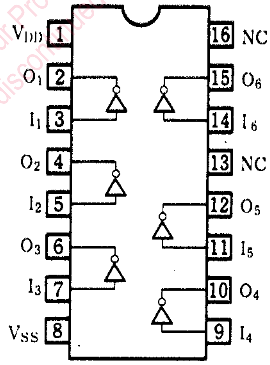


16-pin PANAFLAT package (SO-16D)

■ Schematic Diagram (1/6) & Input Protection Circuit



Pin Configuration



■ Absolute Maximum Ratings (Ta=25°C)

Item		Symbol	Rating	Unit
Supply voltage		V_{DD}	−0.5~+18	V
Input voltage		V_I	−0.5~V_{DD}+0.5*	V
Output pin voltage		V_O	−0.5~V_{DD}+0.5*	V
Peak input · output pin current		±I_I	max. 10	mA
Power dissipation (per package)	Ta=−40~+60°C	P_D	max. 400	mW
	Ta=+60~+80°C		Decrease to 200mW at the rate of 8mW/°C	
Power dissipation (per output pin)		P_D	max. 100	mW
Operating ambient temperature		T_{opr}	−40~+85	°C
Storage temperature		T_{stg}	−65~+150	°C

* V_{DD}+0.5V should be lower than 18V.

■ Guaranteed Fan-Out for Logic Circuit Series

Driving IC	Guaranteed fan-out
Standard TTL	2
74LS	9
74L	16

■ DC Characteristics (V_{SS}=0V)

Item	V_{DD} (V)	Symbol	Condition		Ta=−40°C min.	Ta=−40°C max.	Ta=25°C min.	Ta=25°C max.	Ta=85°C min.	Ta=85°C max.	Unit
Static supply current	5	I_{DD}	$V_I=V_{SS}$ or V_{DD}		—	4	—	4	—	30	μA
	10				—	8	—	8	—	60	
	15				—	16	—	16	—	120	
Output voltage low level	5	V_{OL}	$V_I=V_{SS}$ or V_{DD}, $\lvert I_O \rvert<1\mu A$		—	0.05	—	0.05	—	0.05	V
	10				—	0.05	—	0.05	—	0.05	
	15				—	0.05	—	0.05	—	0.05	
Output voltage high level	5	V_{OH}	$V_I=V_{SS}$ or V_{DD}, $\lvert I_O \rvert<1\mu A$		4.95	—	4.95	—	4.95	—	V
	10				9.95	—	9.95	—	9.95	—	
	15				14.95	—	14.95	—	14.95	—	
Input voltage low level	5	V_{IL}	$\lvert I_O \rvert<1\mu A$	V_O=0.5V or 4.5V	—	1.5	—	1.5	—	1.5	V
	10			V_O=1V or 9V	—	3	—	3	—	3	
	15			V_O=1.5V or 13.5V	—	4	—	4	—	4	
Input voltage high level	5	V_{IH}	$\lvert I_O \rvert<1\mu A$	V_O=0.5V or 4.5V	3.5	—	3.5	—	3.5	—	V
	10			V_O=1V or 9V	7	—	7	—	7	—	
	15			V_O=1.5V or 13.5V	11	—	11	—	11	—	
Output current low level	4.75	I_{OL}	V_O=0.4V,		3.5	—	2.9	—	2.3	—	mA
	10		V_O=0.5V, V_I=0 or 10V		12	—	10	—	8	—	
	15		V_O=1.5V, V_I=0 or 15V		24	—	20	—	16	—

Request for your special attention and precautions in using the technical information and semiconductors described in this book

(1) If any of the products or technical information described in this book is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially, those with regard to security export control, must be observed.

(2) The technical information described in this book is intended only to show the main characteristics and application circuit examples of the products. No license is granted in and to any intellectual property right or other right owned by Panasonic Corporation or any other company. Therefore, no responsibility is assumed by our company as to the infringement upon any such right owned by any other company which may arise as a result of the use of technical information described in this book.

(3) The products described in this book are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).
Consult our sales staff in advance for information on the following applications:
- Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
- Any applications other than the standard applications intended.

(4) The products and product specifications described in this book are subject to change without notice for modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.

(5) When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Otherwise, we will not be liable for any defect which may arise later in your equipment.
Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.

(6) Comply with the instructions for use in order to prevent breakdown and characteristics change due to external factors (ESD, EOS, thermal stress and mechanical stress) at the time of handling, mounting or at customer's process. When using products for which damp-proof packing is required, satisfy the conditions, such as shelf life and the elapsed time since first opening the packages.
