262144-BIT(32768-WORD BY 8-BIT)CMOS STATIC RAM

DESCRIPTION

This M5M5256CP,FP,KP,VP,RV is a 262144-bit CMOS static RAMs organized as 32768-words by 8-bits which is fabricated using high-performance 3 polysilicon CMOS technology. The use of resistive load NMOS cells and CMOS periphery result in a high-density and low-power static RAM. Stand-by current is small enough for battery back-up application. It is ideal for the memory systems which require simple interface.

Especially the M5M5256CVP,RV are packaged in a 28-pin thin small outline package. Two types of devices are available, M5M5256CVP (normal lead bend type package) and M5M5256CRV (reverse lead bend type package). Using both type of devices, it becomes very easy to design a printed circuit board.

FUNCTION

When setting $\bar{S}$ at a high level, the chip is in a non-selectable mode in which both reading and writing are disabled. In this mode, the output stage is in a high-impedance state, allowing OR-tie with other chips and memory expansion by $\bar{S}$. The power supply current is reduced as low as the stand-by current which is specified as I_{cc3} or I_{cc4} , and the memory data can be held +2V power supply, enabling battery back-up operation during power failure or power-down operation in the non-selected mode.
