

XPS-6345W-DXXXG

(RoHS Compliant)

14.025Gbps / 40 km / DWDM XFP Single-Mode Optical Transceiver for 16G FC Applications

FEATURES

- Up to 14.025 Gbps Bi-directional Data Links
- Complaint with XFP MSA
- Compliant with XFI 10G Serial Electrical Interface
- Compliance with Fibre Channel 1600-SM-LL-L
- **Maximum Link Length of 40 km**
- **Temperature-stabilized DWDM EML Transmitter**
- **14 dB Power Budget at Least**
- **50 GHz ITU Grid, C Band**
- 2-Wire Interface for Integrated Digital Diagnostic Monitoring
- **Lineside Loopback Mode Supported**
- XFI Loopback Mode Supported
- No reference Clock required
- Power Dissipation < 3.5 W
- Dual 5V and +3.3 V Power Supply
- RoHS-6 Compliant
- 0 to 70°C Case Operating Temperature
- Duplex LC Connector

APPLICATIONS

- Multi-rate 16G / 8G / 4G Fibre Channel
- 10G FCoE

LASER SAFETY

This single-mode transceiver is a Class 1 laser product. It complies with IEC-60825 and FDA 21 CFR 1040.10 and 1040.11. The transceiver must be operated within the specified temperature and voltage limits. The optical ports of the module shall be terminated with an optical connector or with a dust plug.

DESCRIPTION

XPS-6345W-DXXXG series DWDM transceivers are designed for single-mode fibre serial optical data communications such as 16G/8G/4G Fibre Channel.

This module is designed for single mode fiber and operates at a nominal wavelength of 50GHz ITU Grid, C Band DWDM wavelength. A guaranteed minimum optical link budget of 14 dB is offered. The transmitter section consists of a temperature-stabilized DWDM electrical-modulated laser (EML), driver and signal conditioner. The receiver section incorporates a PIN photodiode integrated with a trans-impedance preamplifier (TIA) and signal conditioner.

The module is with the XFP 30-pin connector to allow hot plug capability. Integrated Tx and Rx signal conditioners provide high jitter-tolerance for full XFI compliance and no external reference clock required. The internally ac coupled high speed serial I/O simplifies interfacing to external circuitry. Dual 5V and 3.3V power supply are used. The optical output can be disabled by LVTTTL logic high-level input of TX_DIS. Loss of signal (RX_LOS) output is provided to indicate the loss of an input optical signal of receiver.

A serial EEPROM in the transceiver allows the user to access transceiver digital diagnostic monitoring and configuration data via the 2-wire XFP Management Interface. This interface uses a single address, A0h, with a memory map divided into a lower and upper area. Basic digital diagnostic data is held in the lower area while specific data is held in a series of tables in the high memory area.

MANAGEMENT INTERFACE

The structure of the memory map is shown in Figure 1, which is accessible over a 2-wire serial interface at the 8-bit address 1010000X (A0h). The normal 256 byte I2C address space is divided into low and upper blocks of 128 Bytes. The lower block of 128 Bytes is always directly available and is used for the diagnostics and control function. Multiple blocks of memories are available in the upper 128 Bytes of the address space. These are individually addressed through a table select Byte which the user enters into a location in the lower address space. Thus, there is a total available address space of 128*256 = 32 Kbytes in this upper memory space. The contents of Table 01h are listed in Table 1 below. Please refer SFF INF-8077i (Revision 4.5) for detailed information.
