Modular Cascaded Amplifiers

Selection Guide

1

UTC Series

Features

- **Factory-Assembled**
- **Optimized Electrical Parameters**
- **Convenient SMA Connected Package**

Applications

- **Laboratory Amplifiers**
- **IF/RF Gain Blocks**

Description

The UTC Series is made up of connected, aluminum cases containing substrates that accept 1 to 4 of HP's cascable TO-8 packaged devices. Rugged, connected UTC devices are useful for system applications where SMA connections are used, for lab gain blocks, or for system breadboard applications.

Available cases and substrates are TC-1 (containing one TO-8), TC-2 (containing two TO-8 modules) and the TC-4 (containing three or four TO-8 modules).

All of HP's TO-8 UTO amplifiers are available in the TC-1 package with SMA Female connectors. In addition to these single TC-1 units, HP offers the standard line of cascaded TC-2 and TC-4 products described in this section.

Beyond these standard amplifier cascades, the wide range of HP amplifiers, AGC amps, and limiting amps, can be cascaded in various configurations, providing a wide range of solutions. An application note is included in this catalog that discusses the tradeoffs between NF and other specifications as a function of the placement of different TO-8 devices. Special configurations can be ordered from HP, or the user may assemble an application specific cascade with individual TO-8 devices and case parts.

Case Types TC-2, TC-4

(See Section 5 for detailed case drawings.)

UTC20-212-X	10-2000	34/32	6.0	+14	±2.0	+29	2.2:1	104	TC4
UTC20-213-X	10-2000	40/38	6.0	+12	±2.0	+29	2.2:1	126	TC4

See Section 5 for connector options available for TC-2 and TC-4 cases.

- Notes:
- Both RF input and RF output pins are at DC ground—no blocking capacitor.
 - RF input pin is at DC ground—no input blocking capacitor.
 - A portion of any DC voltage applied to the RF input pin will appear at the RF output pin (i.e., a resistive DC path exists between pins). There is no input or output blocking capacitor.
 - High reverse isolation, Typ. S_{12} = -48 dB at 500 MHz.
 - From 10-500 MHz, Power Output for 1 dB Comp = +24.5 dBm.
 - From 10-500 MHz, Power Output for 1 dB Comp = +26 dBm.
 - Guaranteed at 0° to 50°C min.
 - Minimum and maximum performance specifications guaranteed at 25°C only.
 - Guaranteed parameters are split across the frequency band. Please refer to the detailed specification pages listed for more information.
