

AEP SMB series connectors meet or exceed MIL-PRF-39012 performance requirements, offering good electrical performance to 10 GHz. Their snap-on mating makes them ideal for use in confined areas where the use of wrenches is not practical.

AEP SMC series connectors offer the same low cost and small size as SMB series, but their screw-on mating provides extra mating security. Frequency range: DC-10 GHz.

SMB and SMC connectors with a MIL-PRF-39012 QPL version available have the appropriate slash sheet noted. See pages 3 and 4 for a complete listing of SMB and SMC QPL connectors.

AEP SLB series connectors are similar to SMB series, but have slide-on mating for use in multiple mounting or rack-and-panel applications. SLB plugs will mate with SMB jacks.

Standard cables for use with these connectors are shown at the bottom of the appropriate product pages. A complete listing of cable groups is on page 145. All the items shown are available with either gold or nickel plated bodies; part numbers for each finish are shown in the product section. The index listing for each connector shows the appropriate cable assembly instruction. Assembly instructions start on page 148.

Factory-built cable assemblies using these connectors are available from AEP.

SPECIFICATIONS

MIL-PRF-39012

Materials:

Body components, male contacts:
Brass per ASTM B16, alloy 360, 1/2 hard
Female contact: Beryllium copper per
ASTM B196, condition HT.
Insulators: Teflon TFE per ASTM-D-1710.

Finish:

Center contacts: Gold plated per
MIL-G-45204.
All other parts finished to meet
MIL-PRF-39012 corrosion requirements.

Electrical:

Impedance: 50 ohms.
Frequency range: SMC: DC-10 GHz.
SMB, SLB: DC-4 GHz.

Mechanical shock: Method 213,
SMB, condition B.
SMC, condition C.
Thermal shock: method 107, condition B.

Cable Attachment Methods

All connectors in these series have captivated contacts which are soldered to the cable center conductor. All the cable attachment methods shown have gripping force greater than the breaking strength of the cable.

Clamp Type For Flexible Cable

These connectors can be assembled without special tooling, and are field replaceable. They provide metal-to-metal clamping of the cable braid.

Crimp Type For Flexible Cable

Crimping the cable braid is the most reliable and repeatable method of cable assembly, and provides support for the cable during flexure. AEP crimp type connectors are assembled quickly and easily using readily-available commercial or MIL crimp tools.

Solder-Clamp For Semi-Rigid Cable

This method allows retrimming of the cable dielectric, if necessary, during assembly. Connectors can be repositioned relative to the cable after assembly by loosening the clamp nut. Solder-clamp connectors are field replaceable without special tools.

AEP SLB series connectors can provide a low-cost alternative to other float mount/blind mate connector systems in applications below 4 GHz.

The radial float of the panel mounted connectors, combined with the closed-entry mating end hood of the plugs, allows the mating pairs to be misaligned up to about .025" without damage occurring during mating. Since the axial float is not spring-loaded, panel-to-panel separation should be maintained within $\pm .010$ ".

Mating force per connector is 3 pounds maximum, and unmating force is 8 ounces minimum. External actuators, such as levers or jackscrews, should be considered in applications requiring simultaneous mating of multiple connector pairs, especially when one side is P.C. board mounted.

We recommend that only one side of the mating pair be float mounted.

MATING DETAIL, 3025-1511-005 AND 3003-1551-703

To determine panel separation: Add projection from panel or P.C. board for each connector used and subtract mating overlap (.230). Projection for each connector is shown on product pages, and is with all axial float loaded toward panel. Axial float is .008" for all items. Lockwasher is not included with connectors for .093" panel.

Radial float: When desired float is determined, drill panel to .230" diameter plus float amount.
