

Description

Q-Tech QT800 Series Space Qualified, 100kRad(Si) Tolerant Hybrid Oscillators are Class 2 Hybrids per MIL-PRF-55310. These CMOS and Sine Wave TCXOs are hermetically sealed in a 24 pin Double Dual In-Line, 24 pin Flat-Pack .975" x 1.275", or 32 pin Flat-Pack 1" SQR, and operate over a variety of voltages and temperature ranges.

Features

- Made in USA
- Hermetically sealed packages
- Supply voltage 3.3Vdc, 5.0Vdc, 12.0Vdc, and 15.0Vdc
- Temperature range -40°C to +85°C
- Screened and Quality Conformance Inspection to MIL-PRF-55310
- CMOS & Sine Wave outputs
- 100k(Si) Radiation tolerant
- Low phase noise and jitter
- NEW: Low Noise option for even lower phase noise on our Sine Wave output TCXOs.

Packaging Options

- Standard ESD packaging

EAR Destination Control Statement

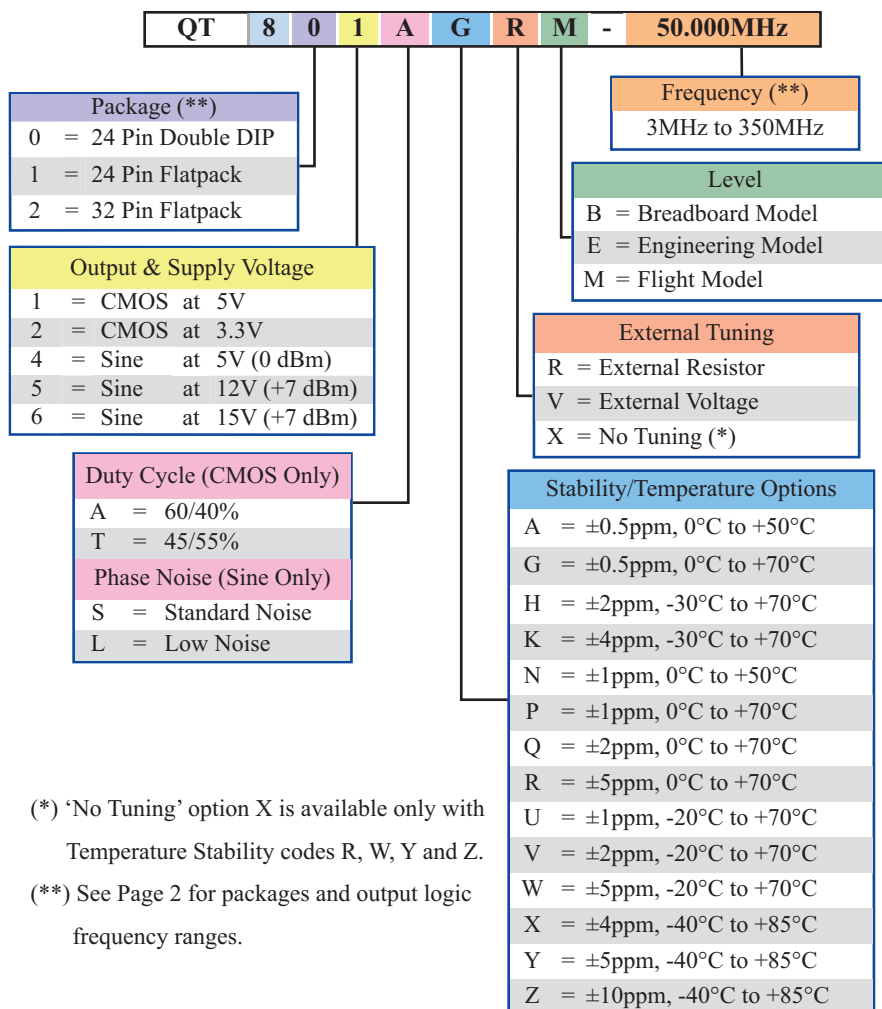

This product and related technical data are subject to the EAR as promulgated and implemented by the U.S. Department of Commerce Bureau of Industry and Security. This product and related technical data are controlled under Export Control Classification Number (ECCN) 9A515.e.1 of the Commerce Control List (CCL), and may not be exported, re-exported, or re-transferred outside of the U.S. or released or disclosed to Foreign Persons, as defined by the EAR, without first complying with all applicable U.S. Export Regulations.

Ordering Information

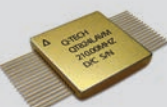

(Sample part number)

QT 801 AGRM - 50.00MHz

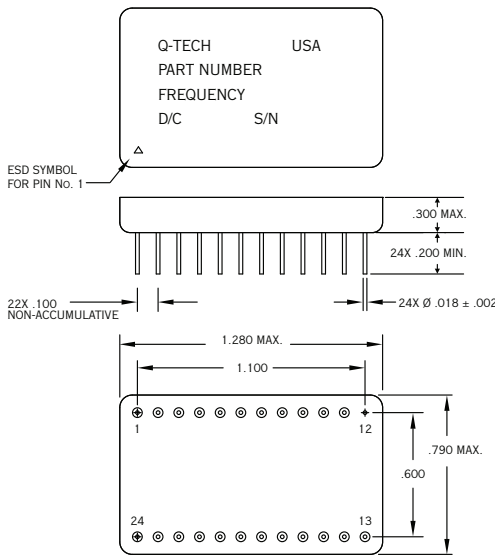

(*) 'No Tuning' option X is available only with Temperature Stability codes R, W, Y and Z.

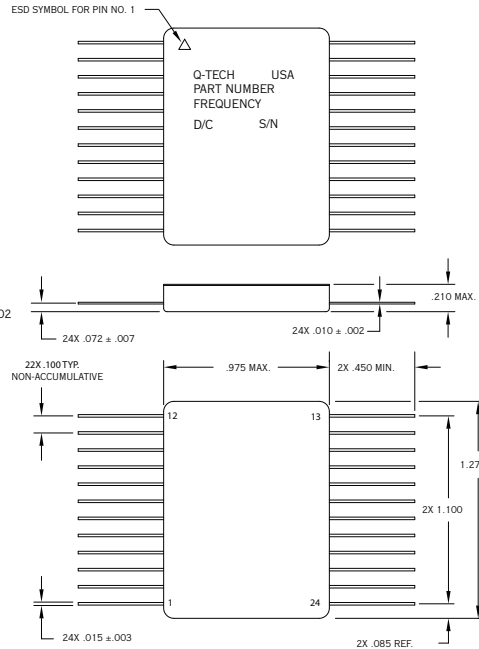

(**) See Page 2 for packages and output logic frequency ranges.

Photo	Package	Product QT	Output Logic	Vdd (V)	Frequency Range

1 PURPOSE

- 1.1 The purpose of this Detail Specification Control Drawing (SCD) is to describe the specific quality and reliability requirements for a temperature compensated crystal oscillator (TCXO).

2 SCOPE

- 2.1 This specification establishes the minimum detail requirements for a low profile hybrid, hermetically sealed, Type 3, Class 2 (reference MIL-PRF-55310) TCXO.

3 PART PROTECTION AND SAFETY

- 3.1 These items are susceptible to breakdown damage resulting from electrostatic discharge. Every precaution shall be taken while handling, installing, and testing the parts to prevent static charge. Care should be exercised to not apply more than rated voltage or current to any terminal/pad during testing.

4 PART NUMBER

- 4.1 The Q-Tech Part Number shall be as specified in Ordering Information (Page 1).

5 APPLICABLE DOCUMENTATION & REFERENCES

- 5.1 The following documents form a part of this drawing to the extent specified or modified herein.

5.2 Military & Industry

- 5.2.1 MIL-PRF-55310, Oscillator, Crystal Controlled, General Specification for
5.2.2 MIL-PRF-38534, Microcircuit Manufacturing, General Specification for
5.2.3 MIL-PRF-38535, Integrated Circuits, (Microcircuits) Manufacturing, General Specification for
5.2.4 MIL-PRF-19500, Semiconductor Devices, General Specification for
5.2.5 MIL-STD-202, Test Methods for Electronic and Electrical Component Parts
5.2.6 MIL-STD-883, Test Methods and Procedures for Microelectronics
5.2.7 MIL-STD-1686, Electrostatic Discharge Control Program for Protection of Electrical and Electronic Parts, Assemblies and Equipment

5.4 Application of Documents

5.4.1 Issue of Documents

Document revisions in effect on the date of the customer purchase order form a part of this drawing except as modified herein.

5.4.2 Order of Precedence

In the event of conflict between this document and the references cited herein or other requirements, the precedence in which requirements shall govern, in descending order, is as follows:

- a) Applicable Customer Purchase Order
- b) Applicable Customer Detail SCD and/or Detail Drawing
- c) Applicable Q-Tech Corporation Detail SCD/Drawing
- d) Applicable Q-Tech Corporation General SCD
- e) Other Specifications, Standards, and Documentation Referenced Above

5.4.3 Customer Purchase Order Special Requirements

Additional special requirements shall be specified in the applicable customer purchase order when additional requirements or modifications are needed for compliance to special programs or product line compliance. Unique identification of the items produced may be required.

5.4.4 General Specification Control Drawing

Any reference to the "general specification" or "general SCD" refers to the Q-Tech Corporation General Specification Control Drawing cited in the Applicable Documentation and References section, unless otherwise specified.

6 REQUIREMENTS

6.1 **General Definition**

The TCXO is a high reliability signal generator that provides a sine-wave or CMOS output. The TCXO has been designed to operate in a spaceflight environment with an expected lifetime in excess of 15 years. Life time is defined as the sum of operational and storage environments

6.2 **Electrical Characteristics**

The electrical characteristics shall be as specified in Table II and Table III.

6.3 **Absolute Maximum Rating**

The absolute maximum ratings shall be as specified in Table I.

6.4 **Physical Characteristics**

6.4.1 **Dimensions**

The TCXO outline dimensions and terminal connections shall be as shown on Page 2.

6.4.2 **Weight**

The TCXO shall weigh less than or equal to 25 grams.

6.4.3 **Materials**

The TCXO package body and lead finish shall be gold in accordance with MIL-PRF-38534.

6.5 **Design and Construction**

The design and construction of the crystal oscillator shall be as specified herein. As a minimum, the oscillators shall meet the design and construction requirements of MIL-PRF-55310, except element evaluation shall be as specified in 6.5.

6.5.1 All piece parts shall be derived from lots that meet the element evaluation requirements of MIL-PRF-38534, Class K, with the following exceptions:

6.5.1.1 Active elements

a) Visual Inspection of Silicon on Sapphire Microcircuits

Semicircular crack(s) or multiple adjacent cracks, not in the active area, starting and terminating at the edge of the die are acceptable. Attached (chip in place) sapphire is nonconductive material and shall not be considered as foreign material and will be considered as nonconductive material for all inspection criteria.

b) Subgroup 4, Scanning Electron Microscope (SEM) Inspection

The manufacturer may allow the die distributor, at his option, to select two (2) dice from a waffle pack (containing a maximum quantity of 100 die), visually inspect for the worst case metallization of the 2 dice, and take SEM photographs of the worst case.

c) Subgroup 5 Radiation Tests

Subgroup 5 radiation tests are not required unless otherwise specified in the detail purchase order.

6.5.2 **Processes**

Processes used for manufacturing the TCXO are selected on the basis of their ability to meet the quality requirements for space High Reliability manufacturing. Travelers or Process Cards are used in the manufacturing and testing of all of the TCXO Series, and might be available for customer review. Copies of these Travelers can be provided with the TCXOs at time of shipment if so specified on the purchase order.

6.5.3 **Interchangeability**

Each TCXO shall be interchangeable without using a special selection process.

6.5.4 **Product Marking**

Each unit shall be permanently marked with the manufacturer's name or symbol, part number, lot date code number, and serial number. The unit shall be marked with the outline of an equilateral triangle near pin 1 to show that it contains devices which are sensitive to electrostatic discharge.

6.6 **Parts Program**

Devices delivered to this specification represent the standardized Parts, Materials and Processes (PMP) Program developed, implemented and certified for advanced applications and extended environments.

6.6.1 Quartz Crystal Resonator

The crystal resonator used shall be constructed using a 4-point mount premium synthetic swept Quartz and procured to Q-TECH SCD. (For the Breadboard and Engineering models, non-swept quartz may be used. See Q-Tech Form F1221, Definitions for Hybrid Product Development Levels).

6.6.2 Sine-Wave Active Devices

Radiation testing is not performed at the oscillator level, but these TCXOs have been acceptable for use in environments up to 100k rads by analysis of the components used. ONLY Bipolar semiconductors are employed in the design. This device is specified to be radiation tolerant to 100 kRad(Si) total ionizing dose (TID).

6.6.3 CMOS Active Devices

Radiation testing is not performed at the oscillator level, but these TCXOs have been acceptable for use in environments up to 100k Rads by analysis of the components used. This device is specified to be radiation tolerant to 100 kRad(Si) total ionizing dose (TID). The microcircuit in this part shall use CMOS technology and shall be from a wafer proven to be radiation tolerant to 100kRad(Si) total ionizing dose.

6.6.3.1 CMOS Microcircuit Usage

For output frequencies below 14MHz, the output microcircuit shall be 54AC74, see DSCC SMD 5962-88520. For frequencies greater than or equal to 14MHz, the CMOS microcircuit shall be 54AC00, see DSCC SMD 5962-87549. These microcircuits are specified to be Single Event Latchup Free for LET up to 93 MeV-cm²/mg. For QT802, QT812, and QT822 devices above 70MHz, the manufacturer shall be National Semiconductor Corporation, otherwise the manufacturer shall be ST Microelectronics Corporation.

6.6.4 Prohibited Materials

Materials containing more than 97% tin and materials containing measurable amounts (by common nondestructive test methods) of selenium, cadmium, or mercury shall not be used as plating, coating or base materials in the construction of parts or components. Zinc is only acceptable as an alloying element and alloys containing zinc must be covered by suitable protective plating (e.g. nickel plating). Inert oxides of the above materials are allowed.

6.7 Traceability Requirements

Material, element and process traceability requirements shall be as specified by MIL-PRF-38534 for Class K hybrids.

6.8 Data

6.8.1 Design Documentation

When required by the purchase order, design, topography, process and flow charts for all assembly/inspection and test operation for devices to be supplied under this specification on the initial procurement shall be established and shall be available in-plant for review by the procuring activity upon request. This design documentation shall be sufficient to depict the physical and electrical construction of the devices supplied under the specification and shall be traceable to the specific parts, drawings or part type numbers to which it applies, and to the production lot(s) and inspection lot codes under which devices are manufactured and tested so that revisions can be identified.

6.8.2 Technical Data Package

When required by the purchase order, the following design documentation and information is deliverable 30 days prior to the start of production. The Technical Data Package shall consist of the following:

- a) Assembly drawing(s).
- b) All electrical schematics and drawings not considered proprietary.
- c) The assembly and screening travelers to be used on-line to manufacture the devices supplied to this specification.

- d) Parts and materials list.
 - e) Element evaluation data confirming compliance with MIL-PRF-38534, Class K, and Prohibited Materials paragraph 3.4.3
- 6.9 **Test Report**
- 6.9.1 A test report is supplied with each shipment of oscillators and includes the following information, as a minimum:
- a) A Certificate of Conformance to all specifications and purchase order requirements. As a minimum, the Certificate of Conformance shall include the following information:
 - 1) Purchase order number.
 - 2) Applicable part number.
 - 3) Manufacturers lot number.
 - 4) Lot date code.
 - b) Parts and materials traceability information.
 - c) Certificate of crystal sweeping.
 - d) Manufacturing lot traveler.
 - e) Screening attributes and variables data as applicable.
 - f) Quality conformance inspection attributes and variables data as applicable.
 - g) Radiographic inspection negatives.
- 6.10 **Non-Flight Oscillators**
Unless otherwise specified in data sheet, the general requirements for non-flight hardware (Breadboard and Engineering models) shall be defined in F1221, Definitions for Hybrid Product Development Levels.
- 6.11 **Screening**
Screening tests shall be in accordance with Table IV.
- 6.12 **Quality Conformance Inspection (QCI)**
Quality conformance shall be as specified herein. All records shall be traceable to the lot number and unit serial number. Samples used for Group A that pass all tests may be delivered on contract.
- 6.12.1 **Oscillator Group A Inspection**
Group A testing shall be in accordance with Table V. Group A inspection shall be performed on units that have passed the screening tests. All electrical performance tests of this specification shall be performed during Group A with the exception of any tests performed as part of the final electrical testing during 100 percent screening.
- 6.12.2 **Oscillator Group B Inspection**
Group B inspection shall be in accordance with Table VI.
- 6.12.3 **Oscillator Group C Inspection**
Group C inspection shall be in accordance with Table VII.
- 6.12 **Destructive Physical Analysis (DPA)**
A DPA may be performed on each lot of devices in accordance with MIL-STD-883, Method 5009. The DPA shall be performed by the customer.

TABLE I - MAXIMUM RATINGS

PARAMETER	SYMBOL	MINIMUM	MAXIMUM	UNITS
Supply Voltage (QT8X1, 8X2, & 8X4)	Vs	0	6	V
Supply Voltage (QT8X5 or QT8X6)	Vs	0	16.5	V
Operating Temperature Range	Tc	-55	+125	°C
Storage Temperature	TSTG	-65	+125	°C
Lead Solder Temperature/Time			+250/10	°C/s
Package Thermal Resistance	θ_{JC}		50	°C/W

TABLE II - ELECTRICAL PERFORMANCE CHARACTERISTICS (CMOS)

ELECTRICAL PARAMETERS	SYMBOL	TEST CONDITIONS	LIMITS			
			MIN.	TYP.	MAX.	UNIT
Frequency, Nominal	fo		3		90	MHz
Supply Voltage, Nominal	Vs		3.135 4.75	3.3 5	3.465 5.25	V
Input Current	Is	Nominal Vs, No Load	-	-	50	mA
Frequency/Temperature Stability	$\Delta f/fc$ (Ta)		See Temp. Codes on Pg. 1			
Frequency Adjustment Range	$\Delta f/fo$		±3	-	-	ppm
Frequency/Vs	$\Delta f/fc$ (Vs)	±5 % Vs @ +25°C	-	-	±1.2	ppm
Load			-	15	-	pF
Output Voltage, High	VOH		Vcc x 0.9	-	-	V
Output Voltage, Low	VOL		-	-	Vcc x 0.1	V
Output Waveform			SQUARE			
Output Rise Time	Tr	10% to 90% of Vs	-	-	5	ns
Output Fall Time	Tf	90% to 10% of Vs	-	-	5	ns
Duty Cycle	DC	Code A Code T	60/40 45/55			%
Frequency/Load Stability	$\Delta f/fc$ (Load)	Load ±5%, Vs Nom. @ +25°C	-	-	±0.3	ppm
Aging, Max. (Note 1)	$\Delta f/fo$	Over 18 Years	-	-	±4	ppm
Frequency Stability vs. Vacuum	$\Delta f/fo$	Guaranteed by Design, Not Tested	-	-	±0.2	ppm
Short Term Stability	$\Delta f/dc$ (Δt)	$\Delta t = 1s$ (Allan Deviation)	-	-	0.001	ppm
Phase Noise @ Frequency Offset	\mathcal{L} (Δf)	$\Delta f = 10Hz$ $\Delta f = 100Hz$ $\Delta f = 1kHz$ $\Delta f = 10kHz$ $\Delta f = 100kHz$	-	-	-70 -100 -130 -140 -140	dBc/Hz

Note: 1. Consult with factory for better Aging performance.

TABLE III - ELECTRICAL PERFORMANCE CHARACTERISTICS (SINE-WAVE)

ELECTRICAL PARAMETERS	SYMBOL	TEST CONDITIONS	LIMITS			
			MIN.	TYP.	MAX.	UNIT
Frequency, Nominal	fo		10		350	MHz
Supply Voltage, Nominal	Vs		4.75 11.4 14.25	5 12 15	5.25 12.6 15.75	V
Input Current, QT8X4	Is	Nominal Vs	-	-	55	mA
Input Current, QT8X5 or QT8X6	Is	Nominal Vs	-	-	30	mA
Frequency/Temperature Stability	$\Delta f/f_c$ (Ta)		See Temp. Codes on Pg. 1			ppm
Frequency Adjustment Range	$\Delta f/fo$		±3	-	-	ppm
Frequency/Vs, QT8X4	$\Delta f/f_c$ (Vs)	±5 % Vs @ +25°C	-	-	±1.2	ppm
Frequency/Vs, QT8X5 or QT8X6	$\Delta f/f_c$ (Vs)	±5 % Vs @ +25°C	-	-	±0.3	ppm
Load			47.5	50	52.5	Ω
Frequency/Load Stability	$\Delta f/f_c$ (Load)	Load ±5%, Vs Nom. @ +25°C	-	-	±0.3	ppm
Aging, Max. (Note 1)	$\Delta f/fo$	Over 18 Years			±4	ppm
Frequency Stability vs. Vacuum	$\Delta f/fo$	Guaranteed by Design, Not Tested	-	-	±0.2	ppm
Short Term Stability	$\Delta f/dc$ (Δt)	$\Delta t = 1s$ (Allan Deviation)	-	-	0.001	ppm
Output Level, QT8X4			0	-	-	dBm
Output Level, QT8X5 or QT8X6			+7	-	-	dBm
Harmonics			-	-	-20	dBc
Sub-Harmonics, Fo > 70MHz			-	-	-20	dBc
Spurious			-	-	-70	dBc
PHASE NOISE	SYMBOL	TEST CONDITIONS	(S Option) MAX.		(L Option) TYP. (NOTE 2)	UNIT
Phase Noise @ Frequency Offset fo ≤ 75MHz	£ (Δf)	$\Delta f = 10Hz$ $\Delta f = 100Hz$ $\Delta f = 1kHz$ $\Delta f = 10kHz$ $\Delta f = 100kHz$	-80 -110 -135 -155 -155	-	-103 -133 -153 -163 -166	dBc/Hz
Phase Noise @ Frequency Offset 75MHz < fo ≤ 150MHz	£ (Δf)	$\Delta f = 10Hz$ $\Delta f = 100Hz$ $\Delta f = 1kHz$ $\Delta f = 10kHz$ $\Delta f = 100kHz$	-70 -100 -125 -145 -145	-	-96 -126 -146 -156 -159	dBc/Hz
Note: Uses 2x Multiplication from lower frequency.						
Phase Noise @ Frequency Offset fo > 150MHz	£ (Δf)	$\Delta f = 10Hz$ $\Delta f = 100Hz$ $\Delta f = 1kHz$ $\Delta f = 10kHz$ $\Delta f = 100kHz$	-65 -95 -120 -140 -140	-	-92 -122 -142 -152 -155	dBc/Hz
Note: Uses 3x Multiplication from lower frequency.						

Note 1: Consult with factory for better Aging performance.

Note 2: Typical phase noise figures for 5V Supply option shall be 2 - 3 dB higher.

TYPICAL PHASE NOISE FOR 50MHz TCXO (SINE WAVE - OPTION L)

	Resistance To Solvents	MIL-STD 202 Method 215	

NOTES

1. Samples from Subgroup 1 may be divided and used for subgroups 3 and 4 inspections.

DCO	REV	REVISION SUMMARY	PAGE	DATE
6541	-	Initial Release: This document is a combination of QPDS-0109, QPDS-0110, QPDS-0111, QPDS-0112, QPDS-0113, QPDS-0114 TCXO data sheets with updates/additions below.	All	3/15/2017
		Added options S and L for Sine Wave phase noise (S is standard, same phase noise specs as previous data sheets).		
		Added Low Noise (Option L) phase noise data.	8	
		Updated Aging limits and years guaranteed.	7, 8	
		Add document F1221 to Par. 5.3	3	
		Add Par. 6.11 (Breadboard and Engineering Model info)	6	
6731	A	Added note for long term aging for Table VI	11	4/26/2017
		Add QCI and DPA verbiage (paragraphs 6.11 and 6.12)	6	
6762	B	Fix typo where part number 8X1 was 3.3V and 8X2 was 5V. Corrected to 8X1 is 5V and 8X2 is 3.3V (for all 3 packages)	2	5/4/2017
		Add Note 1 to Table V	11	
6877	C	Add EAR Destination Control Statement	1	6/1/2017
7150	D	Revise lead length on outline for 24 Pin Flat Pack Was: 2X .500 MIN. Is: 2X .450 MIN.	2	8/24/2017
7346	E	Remove 'No Load' from Table III, Input Current conditions	8	10/11/2017
7537	F	Para 6.6.3 fix typo: 'tolerant'	5	2/14/2018
		Para 6.6.3.1 Fix part numbers to be 8X2 (3.3V) instead of 8X1 (5V)	5	
		Add Screening paragraph 6.11. QCI changed to paragraph 6.12	6	
		Para. 6.12.2 Remove 'The screening test rejects may be used for this test.'	6	
		Para. 6.12.3 Fix typo (said Group B instead of Group C)	6	
		Table III: Add Note 2 for L option phase noise on 5V oscillators	8	
		Table VII: Correct Ambient Pressure (non-operating) test conditions (previously used 'operating' test conditions) Change quantity of parts tested in Subgroup 1 to 4 parts (was 5 parts)	12	
7864	G	Table VII: Remove temperature extreme testing requirement on Electrical Tests between environmental testing (Subgroup 1). Test now only performed at room temperature. End point electricals are unaffected.	12	4/9/2018
