DUAL 4-BIT DECADE COUNTERS

BULLETIN NO. DL-S 7612089, OCTOBER 1976

- Dual Versions of Popular SN5490A, SN54LS90, SN7490A, and SN74LS90 Counters
- Individual Clock, Direct Clear, and Set-to-9 Inputs for Each Decade Counter
- Dual Counters Can Significantly Improve System Densities as Package Count Can Be Reduced by 50%
- Maximum Count Frequency . . . 35 MHz Typical
- Buffered Outputs Reduce Possibility of Collector Commutation

positive logic: High input to clear resets all four outputs low; high input to set-to-9 sets Q_A and Q_D high, Q_B and Q_C low.

description

Each of these monolithic circuits contains eight master-slave flip-flops and additional gating to implement two individual 4-bit decade counters in a single package. Each decade counter has individual clock, clear, and set-to-9 inputs. BCD count sequences of any length up to divide-by-100 may be implemented with a single '490 or 'LS490. Buffering on each output is provided to ensure that susceptibility to collector commutation is reduced significantly. All inputs are diode-clamped to reduce the effects of line ringing. The counters have parallel outputs from each counter stage so that submultiples of the input count frequency are available for system timing signals.

The SN54490 and SN54LS490 are characterized for operation over the full military temperature range of −55°C to 125°C; the SN74490 and SN74LS490 are characterized for use in industrial systems operating from 0°C to 70°C.
