

8228/8238 SYSTEM CONTROLLER AND BUS DRIVER FOR 8080A CPU

- Single Chip System Control for MCS[®]-80 Systems
 - Built-In Bidirectional Bus Driver for Data Bus Isolation
 - Allows the Use of Multiple Byte Instructions (e.g. CALL) for Interrupt Acknowledge
 - Reduces System Package Count
- User Selected Single Level Interrupt Vector (RST 7)
 - 8238 Has Advanced IOW/MEMW for Large System Timing Control
 - Available in EXPRESS — Standard Temperature Range
 - Available in 28-Lead Cerdip and Plastic Packages

(See Packaging Spec, Order #231369)

The Intel[®] 8228 is a single chip system controller and bus driver for MCS[®]-80. It generates all signals required to directly interface MCS-80 family RAM, ROM, and I/O components.

A bidirectional bus driver is included to provide high system TTL fan-out. It also provides isolation of the 8080 data bus from memory and I/O. This allows for the optimization of control signals, enabling the systems designer to use slower memory and I/O. The isolation of the bus driver also provides for enhanced system noise immunity.

A user selected single level interrupt vector (RST 7) is provided to simplify real time, interrupt driven, small system requirements. The 8228 also generates the correct control signals to allow the use of multiple byte instructions (e.g., CALL) in response to an interrupt acknowledge by the 8080A. This feature permits large, interrupt driven systems to have an unlimited number of interrupt levels.

The 8228 is designed to support a wide variety of system bus structures and also reduce system package count for cost effective, reliable design of MCS-80 systems.

NOTE:

The specifications for the 3228/3238 are identical with those for the 8228/8238.

ABSOLUTE MAXIMUM RATINGS*

Temperature Under Bias	-0°C to 70°C
Storage Temperature	-65°C to +150°C
Supply Voltage, V_{CC}	-0.5V to +7V
Input Voltage	-1.5 to +7V
Output Current	100 mA

*Notice: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
