DESCRIPTION

The IDT7MPV6293/94 modules belong to a family of secondary caches intended for use with Intel Pentium CPU-based systems using the 82430 family core logic PCIs sets. Module family members are compliant to the Intel Cache-on-a-Stick (COAST) specification version 3.1.

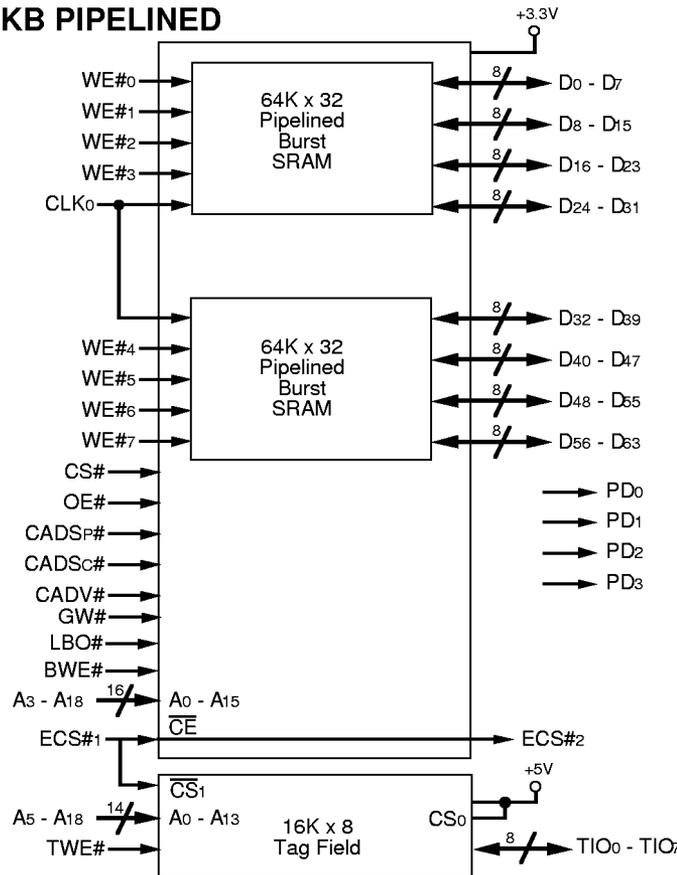

IDT7MPV6293/94 use 64K x 32 pipelined burst RAMs in plastic surface mount packages mounted on a multilayer epoxy laminate (FR-4) board. In addition, the IDT7MPV6293/94 modules use a single 5V 8-bit wide SRAM for the tag.

Four PD (presence detect) input pins allow the system to determine the particular cache configuration.

The low profile card edge package allows 160 signal leads to be placed on a package 4.35" long, a maximum of 0.350" thick and a maximum of 1.14" tall.

All inputs and outputs are TTL-compatible and operate from separate 5V (±5%) and 3.3V (+10/-5%) power supplies. Multiple GND pins and on-board decoupling capacitors ensure maximum protection from noise./
