GENERAL DESCRIPTION

The CTM 5001A is manufactured in Champion's ISO 9001 Certified facility located in Franklin Park, Illinois. The CTM 5001A is a Frequency Translator that can lock to a 19.440MHz input frequency and provides a 19.440MHz, 38.880MHz, 58.320MHz or 77.760MHz Output Frequency.

Further features include alarms for Loss-Of-Reference (LOR), or Loss-Of-Lock (LOL) conditions. Upon LOR the CTM 5001A will automatically enter a "free run" state that will maintain a ± 20 ppm frequency stability. A Tri-State enable/disable function is also available for testing purposes.

The CTM 5001A is available in a Surface Mount Package that is leaded to be compatible with a variety of SMD manufacturing processes.

Champion's Engineering Staff can also modify or customize the CTM 5001A for your particular application.
