SN10KHT5564, SN100KT5564
OCTAL TTL/ECL BUS TRANSCEIVERS WITH 3-STATE OUTPUTS

T-52-11

D3540, JUNE 1990

- **ECL and TTL Output-Enable Inputs**
- **Flow-Through Architecture Optimizes PCB Layout**
- **Center-Pin V_{CC}, V_{EE}, and GND Configurations Minimize High-Speed Switching Noise**
- **Package Options Include "Small Outline" Packages and Standard Plastic 300-mil DIPs**

DW OR NT PACKAGE

description

The SN10KHT5564 and SN100KT5564 are inverting TTL/ECL transceivers designed to translate signals between ECL and TTL environments. The A port (TTL port) is designed to source 15 mA and sink 48 mA. The B port (ECL port) is designed to drive a 50-Ω load terminated to –2 V.

When the output-enable input $\overline{G}$ is low, the device transmits data from the A bus to the B bus or from the B bus to the A bus, depending upon the level at the direction control (DIR) input. When $\overline{G}$ is high, both buses are in the high-impedance state. Both $\overline{G}$ and DIR are ECL-compatible.

The SN10KHT5564 is compatible with 10KH ECL and is characterized for operation from 0°C to 75°C.

The SN100KT5564 is compatible with 100K ECL and is characterized for operation from 0°C to 85°C.
