

DS55325/DS75325 Memory Drivers

General Description

The DS55325 and DS75325 are monolithic memory drivers which feature high current outputs as well as internal decoding of logic inputs. These circuits are designed for use with magnetic memories.

The circuit contains two 600 mA sink-switch pairs and two 600 mA source-switch pairs. Inputs A and B determine source selection while the source strobe (S1) allows the selected source turn on. In the same manner, inputs C and D determine sink selection while the sink strobe (S2) allows the selected sink turn on.

Sink-output collectors feature an internal pull-up resistor in parallel with a clamping diode connected to V_{CC2} . This protects the outputs from voltage surges associated with switching inductive loads.

The source stage features Node R which allows extreme flexibility in source current selection by controlling the amount of base drive to each source transistor. This method of setting the base drive brings the power associated with the resistor outside the package thereby allowing the circuit

to operate at higher source currents for a given junction temperature. If this method of source current setting is not desired, then Nodes R and R_{INT} can be shorted externally, activating an internal resistor connected from V_{CC2} to Node R. This provides adequate base drive for source currents up to 375 mA with $V_{CC2} = 15V$ or 600 mA with $V_{CC2} = 24V$. The DS55325 operates over the fully military temperature range of $-55^{\circ}C$ to $+125^{\circ}C$, while the DS75325 operates from $0^{\circ}C$ to $+70^{\circ}C$.

Features

- 600 mA output capability
- 24V output capability
- Dual sink and dual source outputs
- Fast switching times
- Source base drive externally adjustable
- Input clamping diodes
- TTL compatible

Connection Diagram

Truth Table

Address Inputs		Strobe Inputs		Outputs			
Source A	B	Sink C	D	Source S1	Sink S2	Source W X	Sink Y Z
L	H	X	X	L	H	ON OFF	OFF OFF
H	L	X	X	L	H	OFF ON	OFF OFF
X	X	L	H	H	L	OFF OFF	ON OFF
X	X	H	L	H	L	OFF OFF	OFF ON
X	X	X	X	H	H	OFF OFF	OFF OFF
H	H	H	H	X	X	OFF OFF	OFF OFF

H = High Level, L = Low Level, X = Irrelevant

Note: Not more than one output is to be on at any one time.

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage V_{CC1} (Note 5)	7V
Supply Voltage V_{CC2} (Note 5)	25V
Input Voltage (Any Address or Strobe Input)	5.5V
Maximum Power Dissipation* at 25°C	
Cavity Package	1509 mW
Molded Package	1476 mW

*Derate Cavity Package 10.1 mW/°C above 25°C; derate molded package 11.8 mW/°C above 25°C.

Storage Temperature Range	−65°C to +150°C
Lead Temperature (Soldering, 10 seconds)	300°C

Operating Conditions

	Min	Max	Units
Temperature (T_A)			
DS55325	−55	+125	°C
DS75325	0	+70	°C

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the −55°C to +125°C temperature range for the DS55325 and across the 0°C to +70°C range for the DS75325. All typical values are at $T_A = 25^\circ\text{C}$.

Note 3: All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

Note 4: Only one output at a time should be shorted.

Note 5: Voltage values are with respect to network ground terminal.

Note 6: These parameters must be measured using pulse techniques. $t_W = 200\text{ }\mu\text{s}$, duty cycle $\leq 2\%$.

Switching Characteristics $V_{CC1} = 5V$, $T_A = 25^\circ C$

Applications

EXTERNAL RESISTOR CALCULATION

A typical magnetic-memory word drive requirement is shown in Figure 11. A source-output transistor of one DS75325 delivers load current (I_L). The sink-output transistor of another DS75325 sinks this current.

The value of the external pull-up resistor (R_{EXT}) for a particular memory application may be determined using the following equation:

$$R_{EXT} = \frac{16 [V_{CC2(Min)} - V_S - 2.2]}{I_L - 1.6 [V_{CC2(Min)} - V_S - 2.9]} \quad (1)$$

where: R_{EXT} is in $k\Omega$,

$V_{CC2(Min)}$ is the lowest expected value of V_{CC2} in volts, V_S is the source output voltage in volts with respect to ground, I_L is in mA.

The power dissipated in resistor R_{EXT} during the load current pulse duration is calculated using Equation 2.

$$P_{R_{EXT}} \approx \frac{I_L}{16} [V_{CC2(Min)} - V_S - 2] \quad (2)$$

where: $P_{R_{EXT}}$ is in mW.

After solving for R_{EXT} , the magnitude of the source collector current (I_{CS}) is determined from Equation 3.

$$I_{CS} \approx 0.94 I_L \quad (3)$$

where: I_{CS} is in mA.

As an example, let $V_{CC2(Min)} = 20V$ and $V_L = 3V$ while I_L of 500 mA flows. Using Equation 1:

$$R_{EXT} = \frac{16 (20 - 3 - 2.2)}{500 - 1.6 (20 - 3 - 2.9)} = 0.5 k\Omega$$

and from Equation 2:

$$P_{R_{EXT}} \approx \frac{500}{16} [20 - 3 - 2] \approx 470 mW$$

The amount of the memory system current source (I_{CS}) from Equation 3 is:

$$I_{CS} \approx 0.94 (500) \approx 470 mA$$

In this example the regulated source-output transistor base current through the external pull-up resistor (R_{EXT}) and the source gate is approximately 30 mA. This current and I_{CS} comprise I_L .

TL/F/9755-15

Note 1: For clarity, partial logic diagrams of two DS55325s are shown.

Note 2: Source and sink shown are in different packages.
