

# Ultra-Low Power Consumption Low-Saturation Three-Pin Regulators with On/Off Pin Monolithic ICs MM1065 and 1165

## Outline

These ICs are stabilized power supply devices with ultra-low consumption currents, designed for a greatly reduced reactive current at low input voltages, and with a small input/output difference voltage of 0.2V at an output current of 40mA. The output current is limited to a maximum of 100mA, and in the MMP-4A package, an on/off pin enables the device to be switched on and off.
