VT-702

Description

Vectron's VT-702 Temperature Compensated Crystal Oscillator (TCXO) is a quartz stabilized, Clipped sine wave or CMOS output, analog temperature compensated oscillator, operating off a 5.0 or 3.3 volt supply in a hermetically sealed 10-pad 7.0 x 5.0 mm ceramic package.

Features

- 5.000 - 52.000MHz Output Frequency
- ± 0.28 ppm Temperature Stability
- Optional Frequency Tuning
- Fundamental Crystal Design
- Stratum 3 version available as a custom part number
- Gold over nickel contact pads
- Hermetically Sealed Ceramic SMD package
- Product is compliant to RoHS directive  and fully compatible with lead free assembly

Applications

- Femto Cells
- Base Stations
- IP Networking
- Global Positioning Systems
- Point to Point Radio
- Manpack Radio
- Test and Measurement

Maximum Ratings

Absolute Maximum Ratings and Handling Precautions

Stresses in excess of the absolute maximum ratings can permanently damage the device. Functional operation is not implied or any other excess of conditions represented in the operational sections of this data sheet. Exposure to absolute maximum ratings for extended periods may adversely affect device reliability.

Although ESD protection circuitry has been designed into the VT-702, proper precautions should be taken when handling and mounting. VI employs a Human Body Model and Charged Device Model for ESD susceptibility testing and design evaluation.

ESD thresholds are dependent on the circuit parameters used to define the model. Although no industry standard has been adopted for the CDM a standard resistance of 1.5kOhms and capacitance of 100pF is widely used and therefor can be used for comparison purposes.

Table 4. Maximum Ratings

Parameter	Symbol	Rating	Unit
Storage Temperature	T_{STORE}	-55/125	°C

IR Reflow

Suggested IR Profile

Devices are built using lead free epoxy and can be subjected to standard lead free IR reflow conditions shown in Table 6. Contact pads are gold over nickel and lower maximum temperatures can also be used, such as 220°C.

VCXO Function

VCXO Feature: The VT-702 is supplied with a VCXO function for applications where it will be used in a PLL, or the output frequency needs fine tune or calibration adjustments. This is a high impedance input, 100kOhm, and can be driven with an op-amp or terminated with adjustable resistors etc. **Pin1 should not be left floating on the VCXO optional device.**
