Description

The VFJA100 is a Jitter Attenuator capable of providing an output frequency up to 1 GHz. An internal synthesizer locks to the input reference clock and multiplies it up to the desired output frequency. The output frequency is determined by a VCXO designed for a wide pull range. An internal voltage regulator offers improved stability and noise performance. The output is configured as a differential LVPECL signal and requires external termination resistors. The VFJA100 is available in a 25.4mm x 22 mm surface mount package.
