

To our customers,

---

## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1<sup>st</sup>, 2010  
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

**HIGH VOLTAGE CMOS DRIVER FOR PDP, EL, VFD****DESCRIPTION**

$\mu$ PD16310 is high voltage driver for PDP, EL or VFD graphic panel structured by CMOS process. Logic power supply is 5.0 V connecting direct to control logic. Maximum output voltage is 80 V and maximum current is 50 mA.

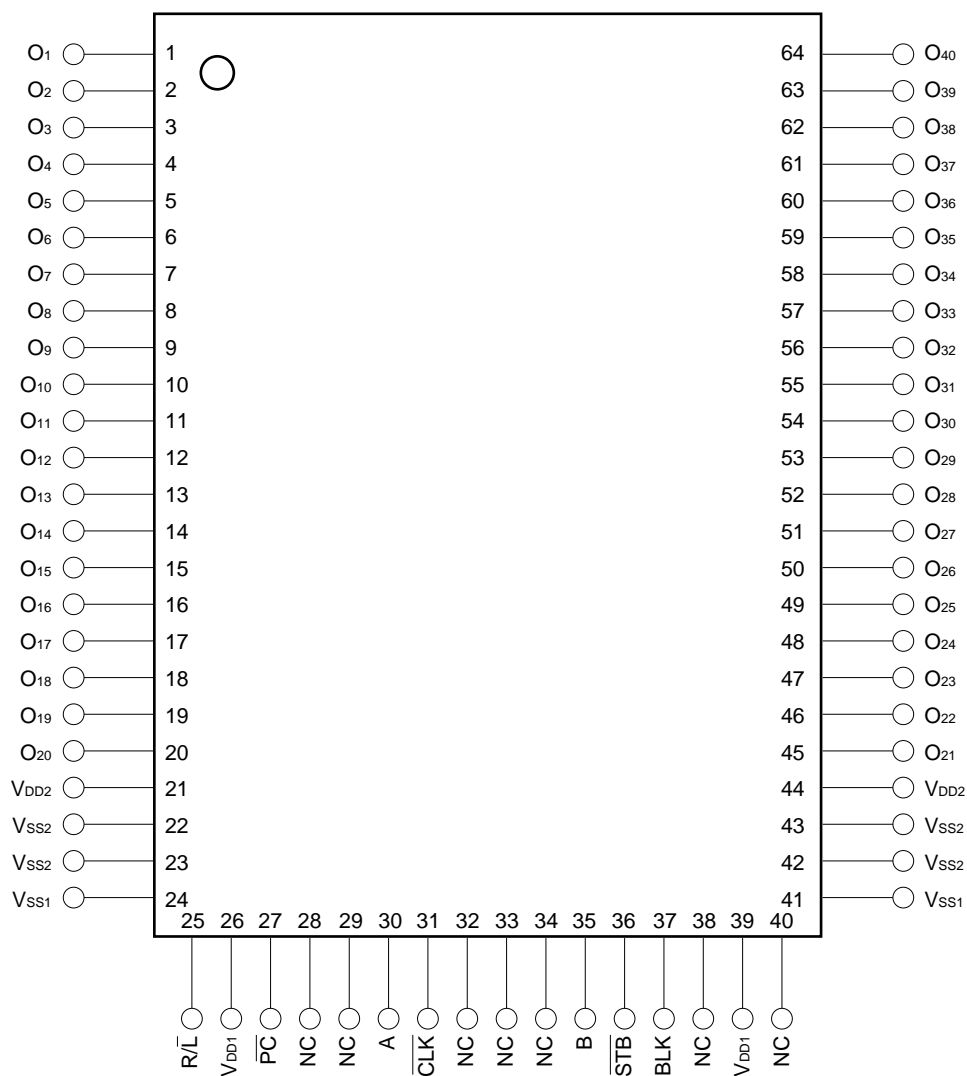

**FEATURES**

- 80 V Output Voltage Swing Capability
- 50 mA Output Sink and Source Current Capability
- 40 bit Shift-register and Latch
- High Speed Serial DATA Transferring ( $f_{\max.} = 20 \text{ MHz MIN.}$ )
- Low Standby Current 100  $\mu\text{A}$

**ORDERING INFORMATION**

Part Number	Package
$\mu$ PD16310GF-3L9	80-pin plastic QFP (3 direction lead)

## PIN CONNECTION DIAGRAM (Top View)

**Note** The 33 pin (NC) should be open.

All the power supply terminals should be used.

V<sub>SS1</sub> and V<sub>SS2</sub> should be respectively connected with themselves outside.

To prevent latch up breakdown, the power should be turned ON in order V<sub>DD1</sub>, logic input, V<sub>DD2</sub>.

It should be turned OFF in the opposite order.

This relationship should be followed during transition period as well.

BLOCK DIAGRAM

## PN CONFIGURATION

PIN No.	SYMBOL	PIN NAME	FUNCTION
27	$\overline{PC}$	Polarity Change Input	All driver outputs' level are inverted while $\overline{PC}$ is L.
37	BLK	Blank Input	All driver outputs are H or L while BLK is H.
36	$\overline{STB}$	Latch Strobe Input	Latch's status is data through while $\overline{STB}$ is L.
30	A	Right Data Input/Output	$R/\overline{L} = H$ : A = IN, B = OUT $R/\overline{L} = L$ : A = OUT, B = IN
35	B	Left Data Input/Output	
31	CLK	Clock Input	Data of shift-register is shifted while CLK is going H to L. (Negative edge is active.)
25	$R/\overline{L}$	Shift Direction Control Input	H: Right Shift Mode A $\rightarrow$ O <sub>1</sub> ... O <sub>40</sub> $\rightarrow$ B L: left Shift Mode B $\rightarrow$ O <sub>40</sub> ... O <sub>1</sub> $\rightarrow$ A
1 - 20 45 - 64	O <sub>1</sub> - O <sub>40</sub>	Driver Outputs	High voltage output 80 V, 50 mA
26, 39	V <sub>DD1</sub>	Logic Power Supply	5.0 V $\pm$ 10 %
21, 44	V <sub>DD2</sub>	Driver Power Supply	10 to 70 V
24, 41	V <sub>SS1</sub>	Ground (for Logic)	Connect to the system ground.
22, 23, 42, 43	V <sub>SS2</sub>	Ground (for Driver)	Connect to the system ground.
28, 29, 32 - 34 38, 40	NC	No Connect	No. 33 pin should be open.

TRUTH TABLE 1 (Shift-Register part)

INPUT		IN/OUT		SHIFT-REGISTER
$R/\overline{L}$	CLK	A	B	
H	$\downarrow$	IN	OUT	DATA is shifted.
H	H or L	IN	OUT	No Change.
L	$\downarrow$	OUT	IN	DATA is shifted.
L	H or L	OUT	IN	No Change.

TRUTH TABLE 2 (Latch, Driver part)

INPUT				DRIVER OUTPUT
A (B)	$\overline{STB}$	BLK	$\overline{PC}$	
X	X	H	H	ALL H
X	X	H	L	ALL L
H	L	L	H	H
H	L	L	L	L
L	L	L	H	L
L	L	L	L	H
X	H	L	H	Latch's data output
X	H	L	L	Latch's data output (inverting)

X = H or L, H = High Level, L = Low Level

TIMING CHART

**ABSOLUTE MAXIMUM RATINGS** ( $T_a = 25\text{ }^{\circ}\text{C}$ ,  $V_{SS1} = V_{SS2} = 0\text{ V}$ )

PARAMETER	SYMBOL	RATINGS	UNIT
Logic Power Supply	$V_{DD1}$	-0.5 to +7.0	V
Input Voltage	$V_I$	-0.5 to $V_{DD1} + 0.5$	V
Logic Output Voltage	$V_{O1}$	-0.5 to $V_{DD1} + 0.5$	V
Driver Power Supply	$V_{DD2}$	-0.5 to 80	V
Driver Output Voltage	$V_{O2}$	-0.5 to $V_{DD2} + 0.5$	V
Drive Maximum Current	$I_{O2}$	$\pm 50$	mA
Power Dissipation	$P_D$	1 000	mW
Operating Temperature	$T_{opt}$	-40 to +85	$^{\circ}\text{C}$
Storage Temperature	$T_{stg}$	-65 to +150	$^{\circ}\text{C}$

**RECOMMENDED OPERATING CONDITIONS** ( $T_a = 25\text{ }^{\circ}\text{C}$ ,  $V_{SS1} = V_{SS2} = 0\text{ V}$ )

PARAMETER	SYMBOL	MIN.	TYP.	MAX.	UNIT
Logic Power Supply	$V_{DD1}$	4.5	5.0	5.5	V
High Level Input Voltage	$V_{IH}$	$0.7 \cdot V_{DD1}$		$V_{DD1}$	V
Low Level Input Voltage	$V_{IL}$	0		$0.2 \cdot V_{DD1}$	V
Driver Power Supply	$V_{DD2}$	10		70	V
Driver Output Current	$I_{OL2}$			+40	mA
	$I_{OH2}$			-40	mA

**DC CHARACTERISTICS** ( $T_a = 25\text{ }^{\circ}\text{C}$ ,  $V_{DD1} = 5.0\text{ V}$ ,  $V_{DD2} = 70\text{ V}$ ,  $V_{SS1} = V_{SS2} = 0\text{ V}$ )

PARAMETER	SYMBOL	MIN.	TYP.	MAX.	UNIT	TEST CONDITIONS
Hight Level Output Voltage	$V_{OH1}$	$0.9 \cdot V_{DD1}$			V	Logic, $I_{OH1} = -1.0\text{ mA}$
Low Level Output Voltage	$V_{OL1}$			$0.1 \cdot V_{DD1}$	V	Logic, $I_{OL1} = 1.0\text{ mA}$
High Level Output Voltage	$V_{OH21}$	69			V	$O_1 - O_{40}$ , $I_{OH2} = -1.0\text{ mA}$
	$V_{OH22}$	65			V	$O_1 - O_{40}$ , $I_{OH2} = -10\text{ mA}$
Low Level Output Voltage	$V_{OL21}$			1.0	V	$O_1 - O_{40}$ , $I_{OL2} = 5.0\text{ mA}$
	$V_{OL22}$			10	V	$O_1 - O_{40}$ , $I_{OL2} = 40\text{ mA}$
High Level Input Current	$I_{IH}$			1.0	$\mu\text{A}$	$V_I = V_{DD1}$
Low Level Input Current	$I_{IL}$			-1.0	$\mu\text{A}$	$V_I = 0\text{ V}$
High Level Input Voltage	$V_{IH}$	$0.7 \cdot V_{DD1}$			V	
Low Level Input Voltage	$V_{IL}$			$0.2 \cdot V_{DD1}$	V	
Standby Current	$I_{DD1}$			10	$\mu\text{A}$	for $V_{DD1}$ , $T_a = 25\text{ }^{\circ}\text{C}$
	$I_{DD1}$			100	$\mu\text{A}$	for $V_{DD1}$ , $T_a = -40\text{ to }+85\text{ }^{\circ}\text{C}$
	$I_{DD2}$			100	$\mu\text{A}$	for $V_{DD2}$ , $T_a = 25\text{ }^{\circ}\text{C}$
	$I_{DD2}$			1 000	$\mu\text{A}$	for $V_{DD2}$ , $T_a = -40\text{ to }+85\text{ }^{\circ}\text{C}$

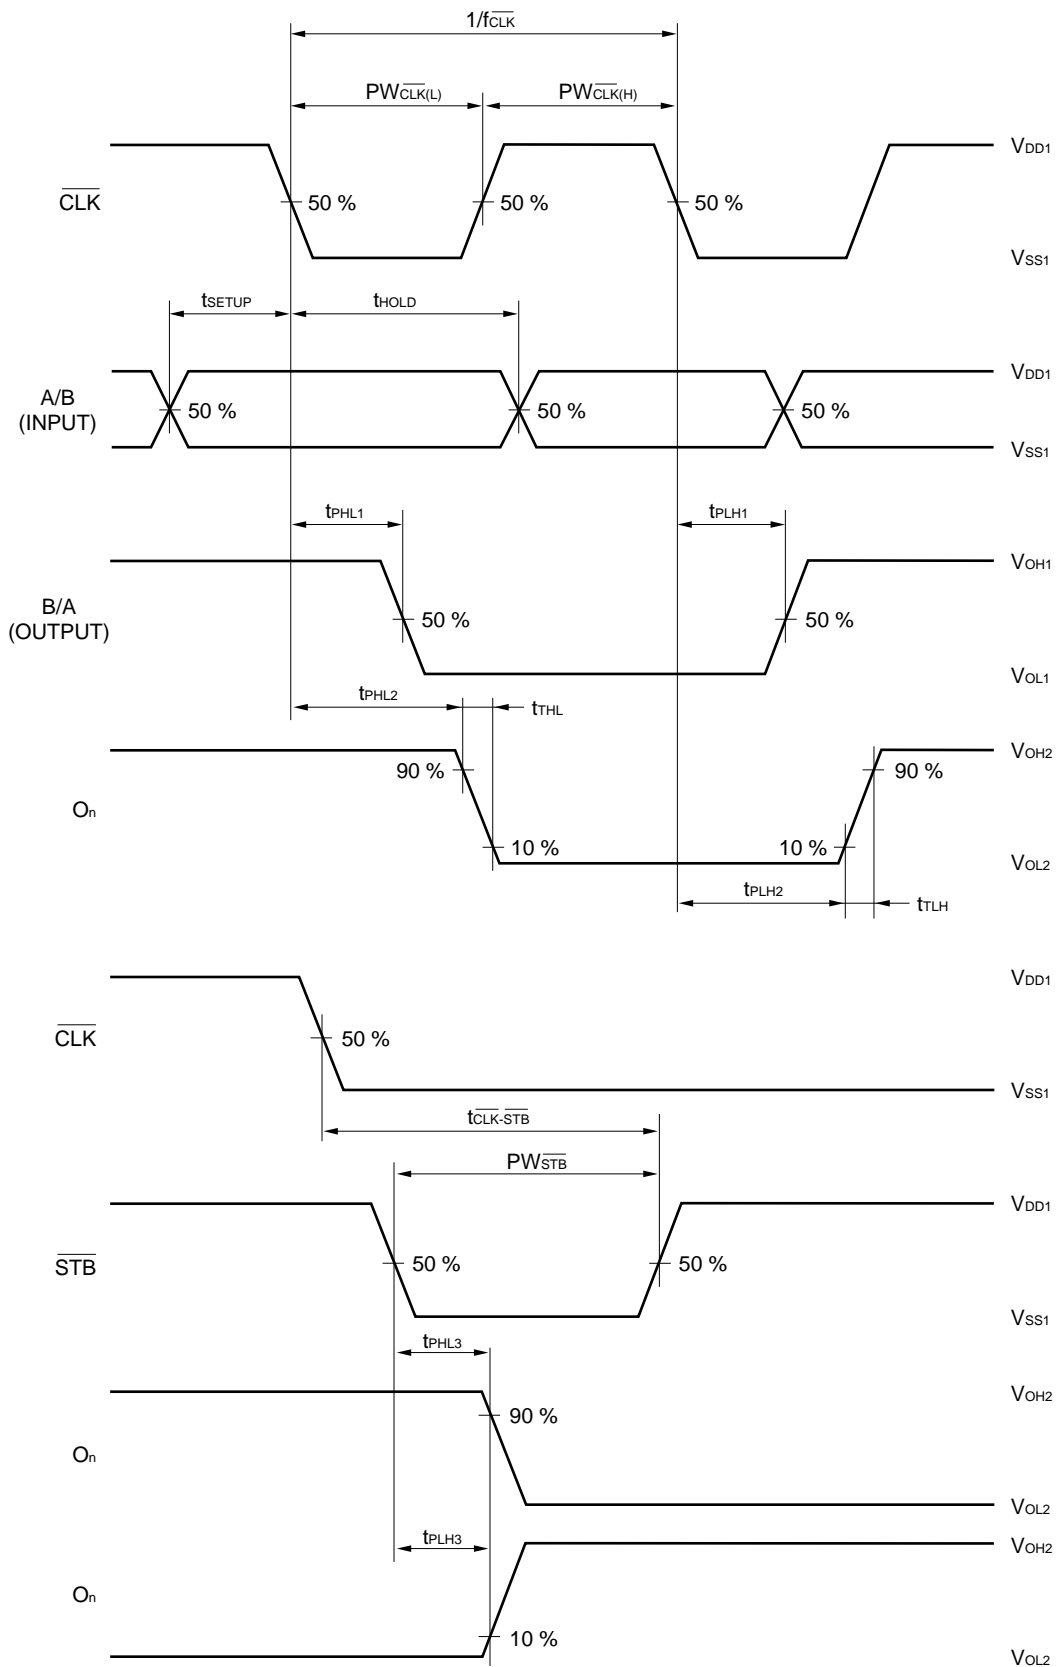

**AC CHARACTERISTICS** ( $T_a = 25\text{ }^{\circ}\text{C}$ ,  $V_{DD1} = 5.0\text{ V}$ ,  $V_{DD2} = 70\text{ V}$ ,  $V_{SS1} = V_{SS2} = 0\text{ V}$ , Logic  $C_L = 15\text{ pF}$ ,  
Driver  $C_L = 50\text{ pF}$ )

PARAMETER	SYMBOL	MIN.	TYP.	MAX.	UNIT	TEST CONDITIONS
Delay Time	$t_{PHL1}$			50	ns	$\overline{\text{CLK}} \rightarrow \text{A/B}$
	$t_{PLH1}$			50	ns	
	$t_{PHL2}$			160	ns	$\overline{\text{CLK}} \rightarrow \text{O}_1 - \text{O}_{40}$
	$t_{PLH2}$			160	ns	
	$t_{PHL3}$			150	ns	$\overline{\text{STB}} \rightarrow \text{O}_1 - \text{O}_{40}$
	$t_{PLH3}$			150	ns	
	$t_{PHL4}$			145	ns	$\text{BLK} \rightarrow \text{O}_1 - \text{O}_{40}$
	$t_{PLH4}$			145	ns	
	$t_{PHL5}$			140	ns	$\overline{\text{PC}} \rightarrow \text{O}_1 - \text{O}_{40}$
	$t_{PLH5}$			140	ns	
Rise Time	$t_{TLH}$			70	ns	$\text{O}_1 - \text{O}_{40}$
Fall Time	$t_{THL}$			70	ns	$\text{O}_1 - \text{O}_{40}$
Maximum Frequency	$f_{\text{max.}}$	20	30		MHz	Duty = 50 %, for CLK
Input Capacitance	$C_i$		10	20	pF	

**AC TIMING REQUIREMENT** ( $T_a = -40\text{ to }+85\text{ }^{\circ}\text{C}$ ,  $V_{DD1} = 4.5\text{ to }5.5\text{ V}$ ,  $V_{DD2} = 10\text{ to }70\text{ V}$   
 $V_{SS1} = V_{SS2} = 0\text{ V}$ )

PARAMETER	SYMBOL	MIN.	TYP.	MAX.	UNIT	TEST CONDITIONS
Clock Pulse Width	$PW_{\overline{\text{CLK}}}$	20			ns	
Strobe Pulse Width	$PW_{\overline{\text{STB}}}$	20			ns	
Blank Pulse Width	$PW_{\text{BLK}}$	200			ns	
Polarity Change Pulse Width	$PW_{\overline{\text{PC}}}$	200			ns	
Data Setup Time	$t_{\text{SETUP}}$	10			ns	
Data Hold Time	$t_{\text{HOLD}}$	10			ns	
Setup Time	$t_{\overline{\text{CLK}}-\overline{\text{STB}}}$	50			ns	for $\overline{\text{CLK}} \downarrow$ to $\overline{\text{STB}} \uparrow$

P80GF-80-3L9-2

**RECOMMENDED SOLDERING CONDITIONS**

The following conditions (see table below) must be met when soldering this product. Please consult with our sales offices in case other soldering process is used, or in case soldering is done under different conditions.

μPD16310GF-3L9

Soldering process	Soldering conditions	Symbol
Infrared ray reflow	Peak package's surface temperature: 230 °C or below, Reflow time: 30 seconds or below (210 °C or higher), Number of reflow process: 1, Exposure limit*: None	IR30-00-1
VPS	Peak package's surface temperature: 215 °C or below, Reflow time: 40 seconds or below (200 °C or higher), Number of reflow process: 1, Exposure limit*: None	VP15-00-1
Partial heating method	Terminal temperature: 300 °C or below, Flow time: 10 seconds or below, Exposure limit*: None	

\* Exposure limit before soldering after dry-pack package is opened.  
Storage conditions: 25 °C and relative humidity at 65 % or less.

**Note** Do not apply more than a single process at once, except for "Partial heating method."

## [MEMO]

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
