DESCRIPTION

The PDIUSBP11A is a one chip generic USB transceiver. It is designed to allow 5.0V or 3.3V programmable and standard logic to interface with the physical layer of the Universal Serial Bus. It is capable of transmitting and receiving serial data at both full speed (12Mbit/s) and low speed (1.5Mbit/s) data rates.

The pinout conforms with the "Serial Interface Engine". Implementation of the Serial Interface Engine along with the USB transceiver allows the designer to make USB compatible devices with off-the-shelf logic and easily modify and update the application.

The PDIUSBP11A is backward compatible to the PDIUSBP11 and allows for single-ended data interfacing.

PIN DESCRIPTION

PIN No.	PIN SYMBOL	I/O	NAME AND FUNCTION																	
3	RCV	O	Receive data. CMOS level output for USB differential input																	
2	OE#	I	Output Enable. Active LOW, enables the transceiver to transmit data on the bus. When not active the transceiver is in receive mode																	
1	MODE	I	Mode. When left unconnected, a weak pull-up transistor pulls it to V _{CC} and in this mode, the PDIUSBP11A is backward compatible to PDIUSBP11. When connected to GND, the VMO/FSEO pin takes the function of FSEO (Force SEO).																	
12, 13	V _{PO} , V _{MO} /F _{SEO}	I	Inputs to differential driver. (Outputs from SIE).

4, 5	V_P, V_M	O	Gated version of D– and D+. Outputs are logic “0” and logic “1”. Used to detect single ended zero (SE0#), error conditions, and interconnect speed. (Inputs to SIE).																					
	VP	VM	RESULT		----	----	------------		0	0	SE0#		0	1	Low Speed		1	0	Full Speed		1	1	Error	
11, 10	D+, D–	A/I/O	Data+, Data–. Differential data bus conforming to the Universal Serial Bus standard.																					
6	SUSPND	I	Suspend. Enables a low power state while the USB bus is inactive. While the suspnd pin is active it will drive the RCV pin to a logic “0” state. Both D+ and D– are tri-stated.																					
9	SPEED	I	Edge rate control. Logic “1” operates at edge rates for “full speed”. Logic “0” operates edge rates for “low speed”.																					
14	V_{CC}		3.0V to 3.6V power supply																					
7	GND		Ground reference
