QUICK REFERENCE DATA		
PARAMETER	VALUE	UNIT
Resistance at 25 °C (R_{25}) (1)	60 to 1000	Ω
Switching temperature	130 to 140	°C
Maximum inrush current	10 to 40	A
Maximum AC voltage (1)	350 to 800	V_{RMS}
Maximum DC voltage (1)	500 to 1200	V_{DC}
Maximum peak voltage (2)	4000	V_P
Operating temperature range	-40 to 105	°C
Storage temperature range	-40 to 165	°C
Dissipation factor	14.5 to 19.5	mW/K
Thermal time constant (still air cooling)	130 to 155	s
Weight	3.5 to 5.7	g

Notes

(1) Other resistance values and maximum operating voltages available on request
Matched resistance values available on request

(2) Maximum peak voltages are based on 8/20 µs pulses that can be applied with limited none-switching energy

AGENCY APPROVALS

Agency approval documents, please see:

www.vishay.com/ppg?29165&documents

FEATURES

- High energy absorption levels up to 240 J
- High number of inrush-power cycles: > 100 000 cycles
- Highly resistant against non-switching peak-powers of up to 25 kW
- Can handle high direct voltage up to 1200 V
- Self protecting in case of overload with no risk of over-heating
- AEC-Q200 qualified
- c-UL-us recognized under file E148885 for AC and DC use
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

RoHS COMPLIANT

APPLICATIONS

Inrush current limiting and load-dump resistor in:

- AC/DC and DC/DC converters
- Load dump and DC-Link circuits
- Emergency discharge circuits
- OBC, Battery charging equipment
- Motor drives
- Welding equipment

PTCEL thermistors have resistance values that can change instantly based on the applied voltage levels and varying body temperatures.

DESCRIPTION

These directly heated ceramic-based doped barium titanate thermistors have a positive temperature coefficient and are primarily intended for inrush current limiting and overload protection. They consist of a ceramic pellet soldered between two tinned CCS wires and coated with a UL 94 V-0 compliant high temperature silicone lacquer. The body is marked with the logo, cold resistance value, EL on one side and date code on the opposite side.

MOUNTING

Important mounting and handling instructions, see:

www.vishay.com/doc?29223

By soldering in any position.

Not intended for potting or sealing.

Maximum surface temperature in case of overload can reach 200 °C.

PACKAGING

PTC thermistors are available in 100 pieces (PTCEL13) or 50 pieces (PTCEL17) layered bulk packed or tape on reel 500 pieces.

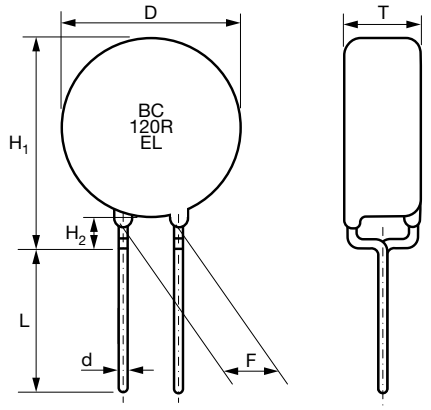
OUTLINE AND DIMENSIONS



COMPONENT DIMENSIONS in millimeters					
SYMBOL	PTCEL13		PTCEL17		
D	13.5 max.		16.5 max.		
d	0.6 ± 0.05		0.8 ± 0.05		
H_1	17 max.		20 max.		
H_2	3 ± 1		3 ± 1		
T	7.0 max.		7.5 max.		
F (1)	5.0 ± 0.8	7.5 ± 0.8	5.0 ± 0.8	7.5 ± 0.8	10.0 ± 0.8
L (2)	20 min.	18 min.	20 min.	18 min.	16 min.

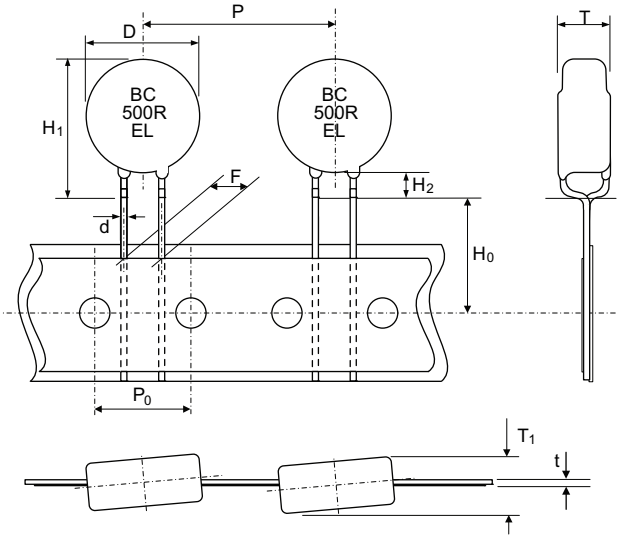
Notes

(1) F pitch = see “Electrical Data and Ordering Information” table for available wire pitch part numbers

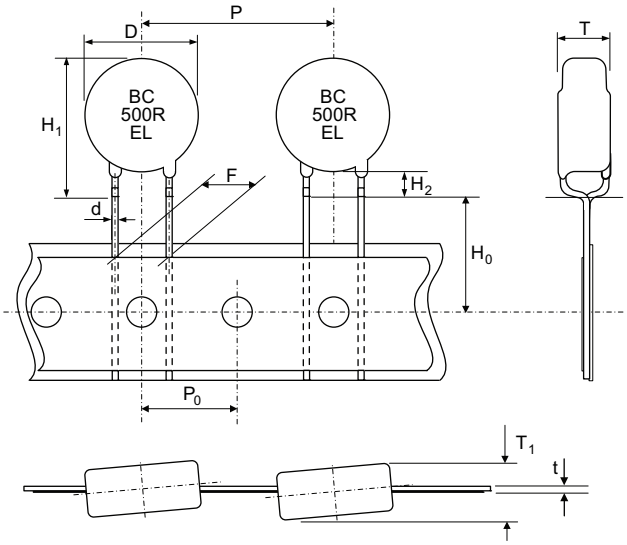
(2) L lead length corresponds to available wire pitch part numbers

TAPE AND REEL DIMENSIONS

Taping on reel with F = 5.0 mm wire pitch, spacing paper tape and foam separator tape used on reel.



Taping on reel with F = 7.5 mm and 10.0 mm wire pitch, spacing paper tape and foam separator tape used on reel.



DIMENSIONS in millimeters (according IEC 60286-2)		
SYMBOL	**PARAMETER**	**VALUE**
D	Body diameter	See bulk dimensions
d	Lead diameter	See bulk dimensions
P	Component pitch	25.4 ± 1.0
P_0	Feedhole pitch	12.7 ± 0.3
F	Lead center to lead center distance (between component and tape)	
	13R and 17R type *TE (leads between feedholes)	5.0 +0.5/-0.2
	13R and 17R type *TE3xx (feedhole between leads)	7.5 +0.5/-0.2
	17R type *TE4xx (feedhole between leads)	10.0 +0.5/-0.2
H_0	Lead wire clinch height	16.0 ± 0.5
H_2	Component bottom to seating plane	3.0 ± 1.0
H_1	Component top to seating plane	See bulk dimensions
T	Body thickness	See bulk dimensions
T_1	Total thickness	T + 1.0 max.

REQUIRED NUMBER OF PTC THERMISTORS TO LIMIT CURRENT AND ABSORB ENERGY

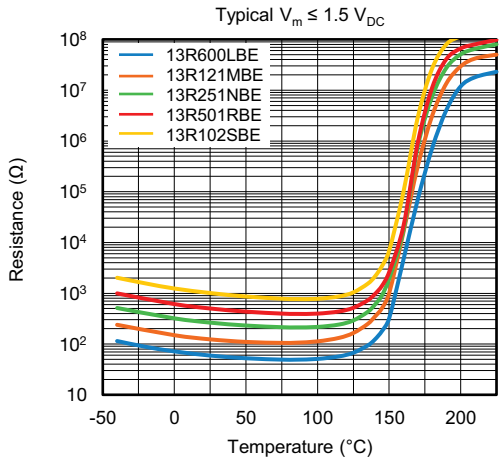
By using several PTC's in a series / parallel network, the maximum current limitation and absorbed energy levels can be further optimized. For homogeneous current and energy distribution it is recommended to combine only PTCEL of the same size and matched resistance value. Energy absorption per PTC in a network depends on current distribution in the network and as such on the individual PTC resistance value. PTCEL thermistors might be used in a series connection to further lower the inrush current, but not to increase the maximum allowed voltage levels. Following formula may be used to calculate the minimum number of PTCEL thermistors of the same size and matched resistance value that are required in a DC link or other capacitor bank application to properly charge or discharge a given amount of non-repetitive energy without follow current. The formula is valid for one charge or discharge operation within cool down period of at least 5 times the thermal time constant and for which the T_{PTC} equals the T_{amb} before a consecutive operation.

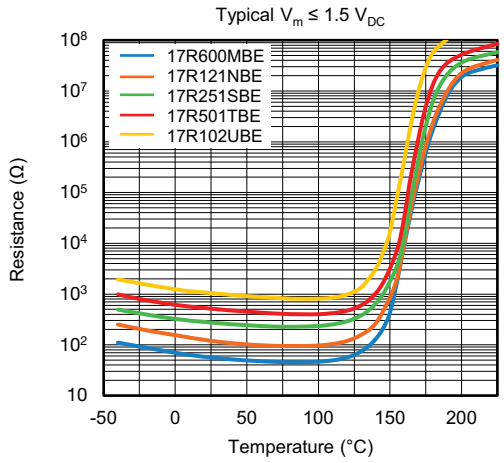
$$N \geq \frac{K \times C \times V^2}{2 \times C_{th} \times (T_{sw} - T_{amb})}$$

Notes

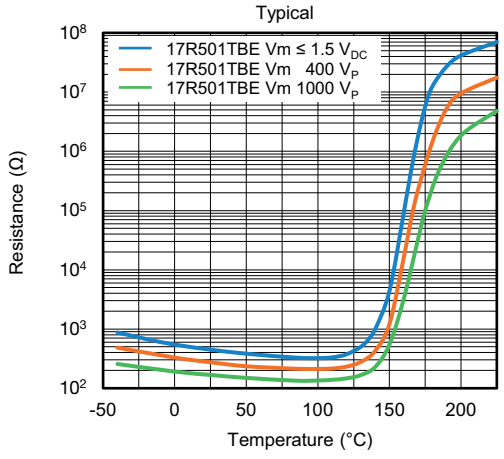
- N is the number of PTCEL required in the network
- C is the total capacitor value to charge or discharge in F
- V is the maximum DC voltage on the capacitor C
- C_{th} is the thermal capacity of one PTC in [J/K] (see table)
- T_{sw} is the minimum switching temperature of the PTCEL (130 °C)
- T_{amb} is the maximum ambient temperature at which the PTC needs to operate
- K is the factor that determines the charging operation mode
  K = 1 for DC charging or discharging
  K = 0.96 for 3-phase rectified charging
  K = 0.76 for single phase rectified charging

RESISTANCE VS. TEMPERATURE

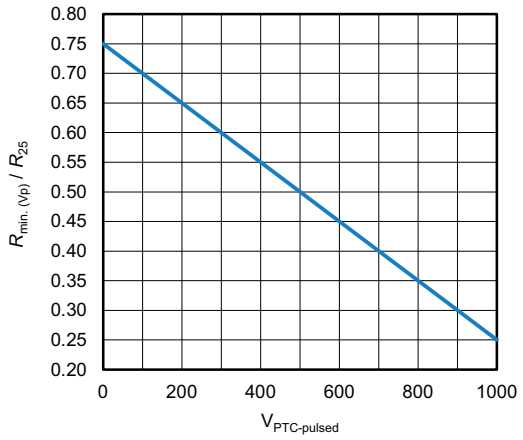




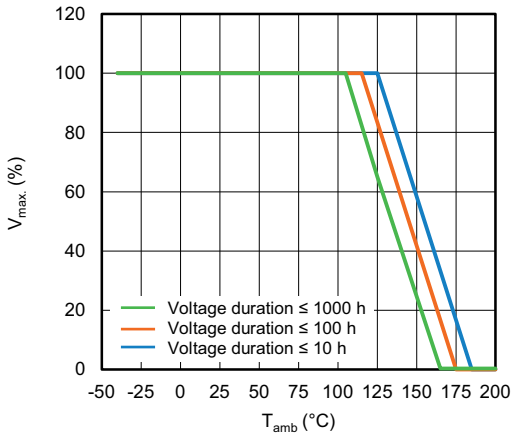
RESISTANCE VS. TEMPERATURE PULSED



MINIMUM PTC RESISTANCE UNDER PULSED VOLTAGE



$V_{max.}$ DERATING VS. T_{amb}



Note

- The minimum PTC resistance values under (pulsed) voltage are depending on actual minimum resistance value in the temperature range of 75°C to 100°C. The linear curve is a simple approximation of the voltage dependency effect. Actual peak currents that could be reached at certain voltage levels can be more precisely evaluated by using the available SPICE models.
- Also check the graph "Resistance vs. temperature pulsed" to see the typical resistance to voltage dependency effect on a PTCEL17R501TBE.
