

Generic NiCR PROM Family

53/63XX-1 53/63XX-2

Features/Benefits

- From 2048-bit to 8192-bit memory
- 8-bit wide for byte-oriented applications
- -1 series for standard performance
- -2 series for enhanced performance
- Reliability-proven nichrome fusible links (qualified for MIL-M-38510)
- PNP inputs for low input current
- Compatible pin configurations for upward expansion

Application

- Microprogram store
- Microprocessor program store
- Look up table
- Character generator
- Random logic
- Code converter

Description

The 53/63XX series generic PROM family offers a wide selection of size and organizations. The 8-bit wide PROMs range from 256x8 to 1024x8 in a wide selection of package sizes including the space-saving SKINNYDIP® 24-pin .300-inch wide package. All PROMs have the same programming specifications allowing a single generic programmer.

The family features low input current PNP inputs, full Schottky clamping, three-state and open-collector outputs. The nichrome fuses store a logical high and are programmed to the low state. Special on-chip circuitry and extra fuses provide preprogramming tests which assure high programming yields and high reliability.

The 63 series is specified for operation over the commercial temperature and voltage range. The 53 series is specified for the military ranges.

Generic PROM Selection Guide

MEMORY			PACKAGE		DEVICE TYPE	
SIZE	ORGANIZATION		PINS	TYPE	COMMERCIAL	MILITARY
2K	256x8	OC TS	20	N, J	6308-1 6309-1	5308-1 5309-1
4K	512x8	OC TS	24 (28)	N, J, JS*, F, (L)	6340-1 6341-1, -2	5340-1 5341-1, -2
		OC TS	20	N, J	6348-1 6349-1, -2	5348-1 5349-1, -2
8K	1024x8	OC TS	24	N, J, JS*, F	6380-1, -2 6381-1, -2	5380-1, -2 5381-1, -2

* JS is the .300 inch wide SKINNYDIP package.

Typical Characteristics

53/6381

Typical I_{CC} vs TemperatureTypical T_{AA} vs Temperature

NOTE: Typical characteristic curves are for three-state devices. Equivalent open collector devices decrease in I_{CC} approximately 10 mA and increase in T_{AA} approximately 6 ns.

Switching Test Load

Definition of Timing Diagram

WAVEFORM	INPUTS	OUTPUTS
	DON'T CARE: CHANGE PERMITTED	CHANGING: STATE UNKNOWN
	NOT APPLICABLE	CENTER LINE IS HIGH IMPEDANCE STATE
	MUST BE STEADY	WILL BE STEADY

Definition of Waveforms

- NOTES:
- Input pulse amplitude 0 V to 3.0 V.
 - Input rise and fall times 2-5 ns from 1.0 V to 2.0 V.
 - Input access measured at the 1.5 V level.
 - t_{AA} is tested with switch S_1 closed, $C_L = 30$ pF and measured at 1.5 V output level.
 - For open collector devices, TEA and TER are measured at the 1.5 V output level with S_1 closed and $C_L = 30$ pF.
 - For three-state devices, TEA is measured at the 1.5 V output level with $C_L = 30$ pF. S_1 is open for high-impedance to "1" test and closed for high-impedance to "0" test.
- TER is tested with $C_L = 5$ pF. S_1 is open for "1" to high-impedance test, measured at $V_{OH} - 0.5$ output level; S_1 is closed for "0" to high-impedance test measured at $V_{OL} + 0.5$ output level.

Commercial Programmers

Monolithic Memories PROMs are designed and tested to give a programming yield greater than 98%. If your programming yield is lower, check your programmer. It may not be properly calibrated.

Programming is final manufacturing — it must be quality-controlled. Equipment must be calibrated as a regular routine,

ideally under the actual conditions of use. Each time a new board or a new programming module is inserted, the whole system should be checked. Both timing and voltages must meet published specifications for the device.

Remember — The best PROMs available can be made unreliable by improper programming techniques.
