

RoHS Compliant

EC2/EE2 SERIES

High-inrush capability type

COMPACT SIZE, SLIM-PACKAGE

DESCRIPTION

NEC TOKIN EC2/EE2 relay is a standard miniature signal relay, compact and slim.
High-inrush capability type can endure 10A inrush for 24Vdc.

FEATURES

- ☐ Compact and light weight
- ☐ FCC (1500 V) and Telcordia (2500 V) surge capacity
- ☐ UL recognized and CSA certified.
- ☐ Low power consumption (100-200 mW)

APPLICATIONS

Thermostat system, Security and Fire-alarm system

For Right Use of Miniature Relays

DO NOT EXCEED MAXIMUM RATINGS.

Do not use relays under exceeding conditions such as over ambient temperature, over voltage and over current. Incorrect use could result in abnormal heating, damage to related parts or cause burning.

READ CAUTIONS IN THE SELECTION GUIDE.

Read the cautions described in NEC TOKIN's "Miniature Relays" when you choose relays for your application.

The information in this document is subject to change without notice.

GENERAL SPECIFICATIONS

Contact Form		2 Form C
Contact Material		Silver alloy with gold alloy overlay
Contact Ratings (UL,CSA ratings)	Maximum Switching Power	60 W, 125 VA
	Maximum Switching Voltage	220 VDC, 250 VAC
	Maximum Switching Current	2 A
	Maximum Carrying Current	3.5 A
Minimum Contact Ratings		10 m VDC, 10μA *1
Initial Contact Resistance		75 m Ω max. (initial)
Operate Time (Excluding bounce)		Approx. 2 ms
Release Time (Excluding bounce)		Approx. 1 ms
Insulation Resistance		1000 M Ω at 500 VDC
Withstanding Voltage	Between open contacts	1000 VAC (for one minute) 1500 V surge (10x160 μs *2)
	Between adjacent contacts	1000 VAC (for one minute) 1500 V surge (10x160 μs *2)
	Between coil and contacts	1500 VAC (for one minute) , 2500 V surge (2x10 μs *3)
		[Double coil latch type] 1000 VAC (for one minute) 1500 V surge (10x160 μs *2)
Shock Resistance		735 m/s ² (75G) (misoperation) 980 m/s ² (100G) (destructive failure)
Vibration Resistance		10 to 55 Hz, double amplitude 3 mm(20G) (misoperation) 10 to 55 Hz, double amplitude 5 mm(30G) (destructive failure)
Ambient Temperature		-40 to +85 °C
Coil Temperature Rise		18 °C at nominal coil voltage (140mW)
Running Specifications	Nonload	1x10 ⁸ operations (Non-latch type) *4 1x10 ⁷ operations (latch type)
	Load	30 VDC 2A (resistive), 0.1x10 ⁶ operations at 20 °C,1Hz
		30 VDC 1A (resistive), 0.5x10 ⁶ operations at 20 °C,1Hz
Weight		Approx. 1.9 g

* 1 This value is a reference value in the resistance load.

Minimum capacity changes depending on switching frequency and environment temperature and the load.

* 2 rise time: 10 μ s, decay time to half crest: 160 μ s

* 3 rise time: 2 μ s, decay time to half crest: 10 μ s

* 4 This shows the number of operations with fatal defects. Stable characteristics are maintained for 1×10^7 operations.

PERFORMANCE DATA

COIL TEMPERATURE RISE

Temperature is measured by coil resistance method.

SWITCHING CAPACITY

These are maximum value.

Inquire with NEC TOKIN for maximum values under continuous use.

MAXIMUM COIL VOLTAGE

This is a maximum value of permissible alteration.

Inquire with NEC TOKIN under continuous use.

APPLIED VOLTAGE VS. TIMING (Sample:EE2-5NQ)

OPERATE AND RELEASE VOLTAGE VS.AMBIENT TEMPERATURE

This shows a typical change of operate (release) voltage. The value of must operate is estimated, so coil voltage must be applied more than this value for safety operation. For hot start operation, please inquire with NEC TOKIN.

RUNNING TEST (Non load)

(Load: none, Drive:5VDC, 50Hz, 50%duty, Ambient temperature :room temperature, Sample:EE2-5NQ ,20pieces)

SOLDERING TEMPERATURE CONDITION

THROUGH-HOLE MOUNTING (EC2)

1. Automatic soldering

Preheating: 110~ 120°C /110 sec. (max.)

Solder temperature: 260°C max.

Solder time: 5 seconds max.

Note: NEC TOKIN recommends cooling down a printed circuit board less than 110°C within 40 seconds after soldering.

2. Manual soldering

Solder temperature: 350°C max.

Solder time: 3 seconds max.

SURFACE-MOUNTING TYPE (EE2)

IRS Method

Note:

1. Temperature profile shows printed circuit board surface temperature on the relay terminal portion.
2. Check the actual soldering condition to use other method except above mentioned temperature profiles.

NOTE ON CORRECT USE

1. Notes on contact load

Make sure that the contact load is within the specified range; otherwise, the lifetime of the contacts will be shortened considerably.

Note that the running performance shown is an example, and that it varies depending on parameters such as the type of load, switching frequency, driver circuit, and ambient temperature under the actual operating conditions. Evaluate the performance by using the actual circuit before using the relay.

2. Driving relays

- If the internal connection diagram of a relay shows + and - symbols on the coil, apply the rated voltage to the relay in the specified direction. If a rippled DC current source is used, abnormalities such as beat at the coil may occur.

- The maximum voltage that can be applied to the coil of the relay varies depending on the ambient temperature. Generally, the higher the voltage applied to the coil, the shorter the operating time. Note, however, that a high voltage also increases the bounce of the contacts and the contact opening and closing frequency, which may shorten the lifetime of the contacts.

- If the driving voltage waveform of the relay coil rises and falls gradually, the inherent performance of the relay may not be fully realized. Make sure that the voltage waveform instantaneously rises and falls as a pulse.

- For a latching relay, apply a voltage to the coil according to the polarity specified in the internal connection diagram of the relay.

- If a current is applied to the coil over a long period of time, the coil temperature rises, promoting generation of organic gas inside the relay, which may result in faulty contacts. In this case, use of a latching relay is recommended.

- The operating time and release time indicate the time required for each contact to close after the voltage has been applied to or removed from the coil. However, because the relay has a mechanical structure, a bounce state exists at the end of the operating and release times. Furthermore, because additional time is required until the contact stabilizes after being in a high-resistance state, care must be taken when using the relay at high speeds.

3. Operating environment

- Make sure that the relay mounted in the application set is used within the specified temperature range. Use of a relay at a temperature outside this range may adversely affect insulation or contact performance.

- If the relay is used for a long period of time in highly humid (RH 85% or higher) environment, moisture may be absorbed into the relay. This moisture may react with the NO_x and SO_x generated by glow discharges that occur when the contacts are opened or closed, producing nitric or sulfuric acid. If this happens, the acid produced may corrode the metallic parts of the relay, causing operational malfunction.

- If any material containing silicon (silicon rubber, silicon oil, and silicon based coating material) is used in the neighborhood of relay, there is some possibility that these materials will emit silicon gas that will penetrate the relay. In this case, the switching contact may generate silicon compounds on the surface of contacts. This silicon compound may result in contact failure. Avoid use of relay in such an environment.

- Because the operating temperature range varies depending on the humidity, use the relay in the temperature range illustrated in the figure below. Prevent the relay from being frozen and avoid the generation of condensation.

- The relay maintains constant sealability under normal atmospheric pressure (810 to 1,200 hpa). Its sealability may be degraded or the relay may be deformed and malfunction if it is used under barometric conditions exceeding the specified range.

- The same applies when the relay is stored or transported. Keep the upper-limit value of the temperature to which the relay is exposed after it is removed from the carton box to within 50°C.

- Permanent magnets are used in polarized relays. For this reason, when magnets, transformers, or speakers are located nearby the relay characteristics may change and faulty operations may result.

- If excessive vibration or shock is applied to the relay, it may malfunction and the contacts remain closed. Vibration or shock applied to the relay during operation may cause considerable damage to or wearing of the contacts. Note that operation of a snap switch mounted close to the relay or shock due to the operation of magnetic solenoid may also cause malfunctioning.

4. Notes on mounting relays

- When mounting a relay onto a PC board using an automatic chip mounter, if excessive force is applied to the cover of the relay when the relay is chucked or inserted, the cover may be damaged or the characteristics of the relay degraded. Keep the force applied to the relay to within 1 kg.

- Avoid bending the pins to temporarily secure the relay to the PC board. Bending the pins may degrade sealability or adversely affect the internal mechanism.

- It is recommended to solder the relay onto a PC board under the following conditions:

<1> Reflow soldering

Refer to the recommended soldering temperature profile.

<2> Flow soldering

Solder temperature: 260°C max., Time: 5 seconds max.

Preheating: 110~ 120°C /110 sec. (max.)

<3> Manual soldering

Solder temperature: 350°C, Time: 2~3 seconds

- Ventilation immediately after soldering is recommended. Avoid immersing the relay in cleaning solvent immediately after soldering due to the danger of thermal shock being applied to the relay.
- Use an alcohol-based or water-based cleaning solvent. Never use thinner and benzene because they may damage the relay housing.
- Do not use ultrasonic cleaning because the vibration energy generated by the ultrasonic waves may cause the contacts to remain closed.

5. Handling

- Relays are packaged in magazine cases for shipment. If a space is created in the case after some relays have been removed, be sure to insert a stopper to secure the remaining relays in the case. If relays are not well secured, vibration during transportation may cause malfunctioning of the contacts.
- Exercise care in handling the relay so as to avoid dropping it or allowing it to fall. Do not use a relay that has been dropped. If a relay drops from a workbench to the floor, a shock of 9,800 m/s² (1,000 G) or more is applied to the relay, possibly damaging its functions. Even if a light shock has been applied to the relay, thoroughly evaluate its operation before using it.

- Latching relays are factory-set to the reset state for shipment. A latching relay may be set, however, by vibration or shock applied while being transported. Be sure to forcibly reset the relay before using it in the application set. Also note that the relay may be set by unexpected vibration or shock when it is used in a portable set.
- The sealability of a surface-mount (SMT) relay may be lost if the relay absorbs moisture and is then heated during soldering. When storing relays, therefore, observe the following points:
 - <1> For standard packing, please use relays within 12 months after delivery. (Storage conditions: 30 °C / 60% RH)If the relays have moisture absorption, dehumidify as follows.
 - Tape packing: 50±5 °C, 200~300 hours.
 - Simple relay: 85±5 °C, 48 hours.
 - <2> For MBB packing, please use relays within 2 years after delivery. (Storage conditions: 30 °C / 60% RH)After open MBB packing, please use within 3 months. (Storage conditions: 30 °C / 60% RH)

NO part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC TOKIN Corporation. NEC TOKIN Corporation assumes no responsibility for any errors which may appear in this document.

NEC TOKIN Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC TOKIN Corporation or others. While NEC TOKIN Corporation has been making continuous effort to enhance the reliability of its electronic components, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC TOKIN electronic component, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features. NEC TOKIN devices are classified into the following three quality grades: "Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC TOKIN devices is "Standard" unless otherwise specified in NEC TOKIN's Data Sheets or Data Books. If customers intend to use NEC TOKIN devices for applications other than those specified for Standard quality grade, they should contact an NEC TOKIN sales representative in advance.

(Note)

- (1) "NEC TOKIN" as used in this statement means NEC TOKIN Corporation and also includes its majority owned subsidiaries.
- (2) "NEC TOKIN electronic component products" means any electronic component product developed or manufactured by or for NEC TOKIN (as defined above).
