050-337 PRODUCT BRIEF
PCB Mount Quad Receiver
100 Mbps – 5 Gbps, MMF, 3.3V

PCB Mount Fiber Optic Quad Receiver, 100M-5Gbps, MMF, 3.3V

Glenair 050-337, is a ruggedized harsh environment PCB mount Quad Receiver with electrical and optical functionality equivalent to SFP transceivers but with mechanical design that is suited to the harsh temperature and vibration environments found in Military, Aerospace, Railway, Oil and Gas, and Industrial applications. The PCB mount quad optical receiver also supports optional Digital Monitoring Interface (DMI) features in accordance with SFF 8472. The Transceiver is comprised of four receiver sections that reside on a common package platform and interface with a host board through a high speed electrical connector.

Each receiver section includes the Receiver Optical Subassembly (ROSA) and amplification/quantization circuitry. The ROSA, containing a PIN photodiode and trans-impedance preamplifier, is located at the optical interface and mates with an ARINC 801 optical connector. The ROSA is mated to a limiting amplifier IC that provides post-amplification and quantization. Also included is a Loss Of Signal (LOS) detection circuit.

KEY FEATURES/BENEFITS

- SFP Compatible Electrical I/O signal levels
- 850nm VCSEL lasers to support up to 5 Gbps
- PIN PD to support high sensitivity up to 5 Gbps
- Industry standard CML input and outputs that make for simple integration on customer host PCB
- ARINC 801 Optical contacts
- Easy assembly - Module is securely mounted with screws from the top to PCB to ensure excellent shock and vibration performance
- High-Speed Electrical plug-in connector eliminates the need for soldering & enables ease of servicing
- Compact Size: 1.1" x1" x 0.39"
- -40°C to +85°C Operating Case Temperature
- Glenair fiber jumpers connect from transceiver to any Glenair Mil/Aero Fiber Optic Connector Style
- Evaluation fixtures available
- Digital Diagnostic and Monitoring (DMI) based on SFF-8472, enables monitoring of:
 - Received optical power, RX optical power, Temperature, Supply Voltage

APPLICATIONS

- Harsh Environment such as: Airborne, Tactical, Railway, Industrial, Oil and Gas and Shipboard applications
 - Ethernet, Fibrechannel, 1x, 2x, 4x, SFPDP

HOW TO ORDER Table 1 Part Number Development Options

Part Number	Two Wire Address	Data Rate	Temperature	Screw Length** (Mod Code)
050-337 PCB Mount Quad-Receiver, MMF, 850nm 0.1-5 Gbps	Blank = A2h, A4h, A6h, A8h Other Options: See Table 1A	-1-D = 100 Mbps - 2.5 Gbps -2-D = 2.5 Gbps - 5 Gbps	Blank = Standard	Blank = Standard -954-xxx = IAW Mod Code 954

Example: **050-337C2-1-D**

PCB Mount Quad-Receiver, MMF, 850nm, Two Wire ID Address = C2h C4h C6h C8h, Data Rate = 100 Mbps – 2.5Gbps, Standard Temperature Range, Standard Screw Length

**Temperature and Screw Length Mod Codes will not be added onto Digital Memory ID (See Table 8)

FIGURE 1 - OUTLINE DRAWING CONTINUED (MARKING)

LABELING:

Each unit will be shipped in an antistatic bag. The label on the antistatic bag shall be at a minimum Arial size 10 black font and contain at a minimum the following information:

ANTISTATIC BAG LABEL:

Glenair

Cage Code: 06324

PN: 050-337XX-X-X

Rev: X

QTY: X

J/N: X

D/C: X

S/N*: XXXXXX

*If QTY is more than 1, there is no S/N

Each unit will be marked, either with a label or laser engraving, as follows:

- Marking font to be Arial, greater than .08 inches in height.
- Marking:

FIRST LINE OF TEXT

- Glenair
- Serial Number (6 digits)

SECOND LINE OF TEXT:

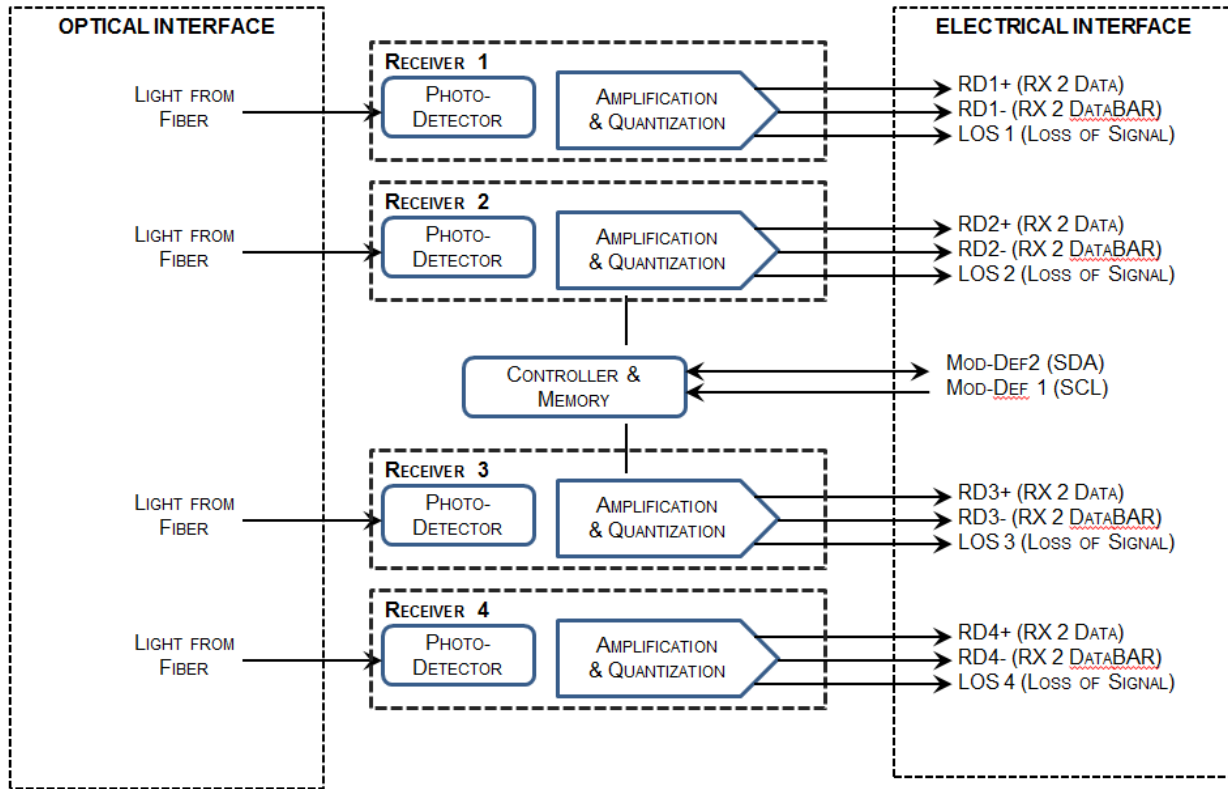

- Part number

050-337 PRODUCT BRIEF
PCB Mount Quad Receiver
100 Mbps – 5 Gbps, MMF, 3.3V

FUNCTIONAL DESCRIPTION

FIGURE 2 – BLOCK DIAGRAM

RECEIVER SECTION

Receiver Loss of Signal (LOS)

The Loss Of Signal (LOS) output indicates an unusable optical input power level. The post-amplification IC includes transition detection circuitry which monitors the ac level of incoming optical signals and provides a TTL/CMOS compatible status signal to the host. A low LOS logic level indicates the presence of an optical input while a high LOS logic level indicates an unusable optical input. The LOS thresholds are factory-set so that a high output indicates a definite optical fault has occurred (e.g. failed transmitter, broken or disconnected fiber connection to the transceiver, etc.). The LOS can also be monitored via the 2-wire serial interface (address A2h, byte 110, bit 1).

050-337 PRODUCT BRIEF
PCB Mount Quad Receiver
100 Mbps – 5 Gbps, MMF, 3.3V

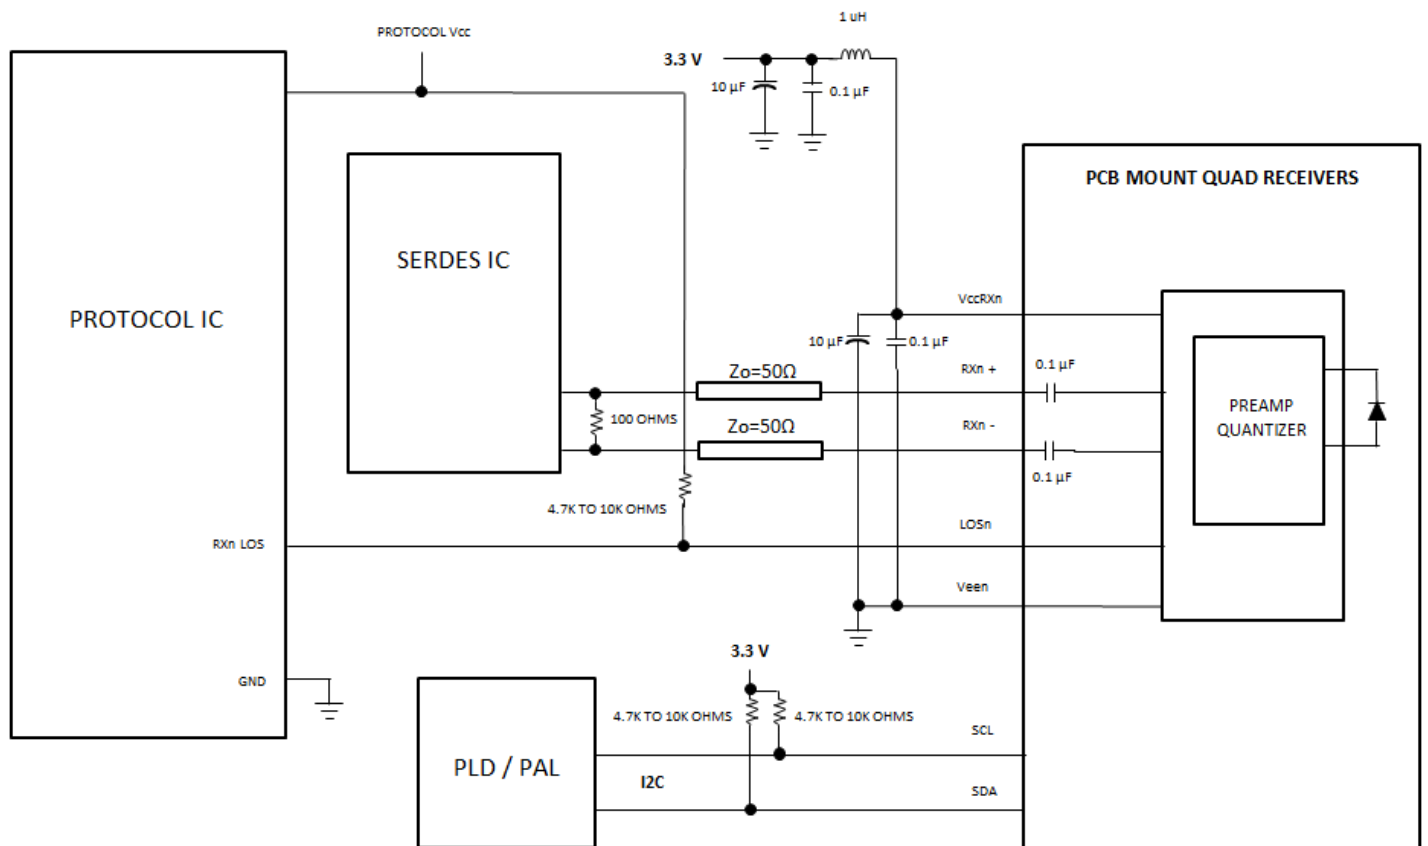

FUNCTIONAL I/O

The PCB mount transceiver accepts industry standard differential signals such as LVPECL and CML within the scope of the SFP MSA. To simplify board requirements, transmitter bias resistors and ac coupling capacitors are incorporated, per SFF-8074i, and hence are not required on the host board. The module is AC-coupled and internally terminated.

Figure 3 illustrates a recommended interface circuit to link the PCB mount transceiver to the supporting Physical Layer integrated circuits.

FIGURE 3 – RECOMMENDED HOST BOARD SCHEMATIC

SINGLE RECEIVER SHOWN (4X RECEIVERS PER MODULE)

The PCB mount receiver interfaces with the host circuit board through twenty I/O pins identified by function in Table 7. The transceiver high speed transmit and receive interfaces require SFP MSA compliant signal lines on the host board. The TX Enable, TX Fault, and Rx LOS lines require TTL lines on the host board (per SFF-8074i) if used. If an application chooses not to take advantage of the functionality of these pins, RX1_LOS, RX2_LOS, RX3_LOS and RX4_LOS do not need to be connected.

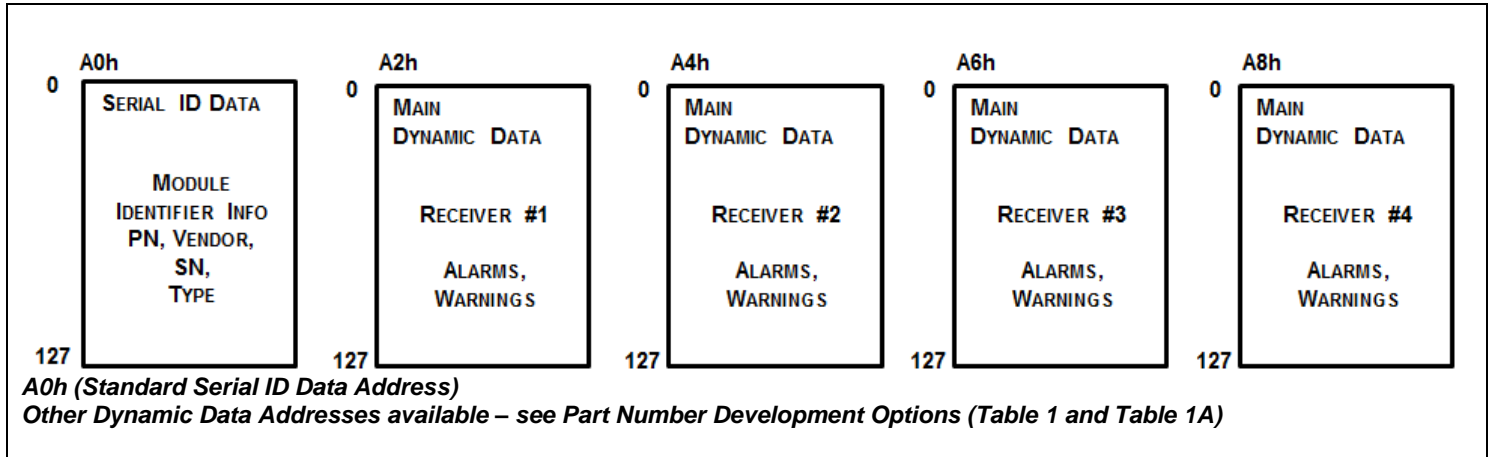

050-337 PRODUCT BRIEF
PCB Mount Quad Receiver
100 Mbps – 5 Gbps, MMF, 3.3V

Digital Diagnostic Interface and Serial Identification (EEPROM)

The PCB mount transceiver is compatible with the SFF-8074i SFP specification and with SFF-8472, the SFP specification for Digital Diagnostic Monitoring Interface. Both specifications can be found at <http://www.sffcommittee.org>.

FIGURE 4 – DIGITAL DIAGNOSTIC MEMORY MAP OVERVIEW

The PCB mount Quad-Receiver features EEPROM for Serial ID, which contains the product data stored for retrieval by host equipment. This data is accessed via the 2-wire serial EEPROM protocol in compliance with the industry standard SFP Multi-Source Agreement. The base EEPROM memory, bytes 0-255 at memory address A0h, is organized in compliance with SFF-8074i.

As an enhancement to the conventional SFP interface defined in SFF-8074i, the PCB mount receiver is derived from SFF-8472 (digital diagnostic interface for optical transceivers) with Memory organized as shown in Figure 4. This digital diagnostic information is stored in bytes 0-127 at memory address A2h (RX1), A4h (RX2), A6h (RX3), A8h (RX4). Using the 2-wire serial interface defined in the MSA, the PCB mount Receiver provides real time temperature, supply voltage, and received input power for each of the four Receivers. These parameters are internally calibrated, per the SFF-8472 MSA. The digital diagnostic interface also adds the capability to monitor for Receiver Loss of Signal (RX_LOS) for each of the 4 receivers. The diagnostic information provides the opportunity for Predictive Failure Identification, Compliance Prediction, Fault Isolation and Component Monitoring.

Compliance Prediction

Compliance prediction is the ability to determine if an optical transceiver is operating within its operating and environmental requirements. The PCB mount receiver provide real-time access to its internal supply voltage and temperature, allowing a host to identify potential component compliance issues. Received optical power is also available to assess compliance of fiber cable plant and remote transmitter. When operating out of requirements, the link cannot guarantee error free transmission.

050-337 PRODUCT BRIEF
PCB Mount Quad Receiver
100 Mbps – 5 Gbps, MMF, 3.3V

Fault Isolation

The fault isolation feature allows a host to quickly pinpoint the location of a link failure, minimizing downtime. For optical links, the ability to identify a fault at a local device, remote device or cable plant is crucial to speeding service of an installation. PCB mount receiver's real-time monitors of Vcc, Temperature and Rx Power can be used to assess local receiver's current operating conditions. In addition, status flag Rx Loss of Signal (LOS) is mirrored in memory and available via the two-wire serial interface.

Component Monitoring

Component evaluation is another use of the PCB mount receiver's real-time monitors of Vcc, Temperature and Rx Power. Potential uses are as debugging aids for system installation and design, and the unit's parametric evaluation for factory or field qualification. For example, temperature per module can be observed in high density applications to facilitate thermal evaluation of systems that incorporate this PCB mount receiver.

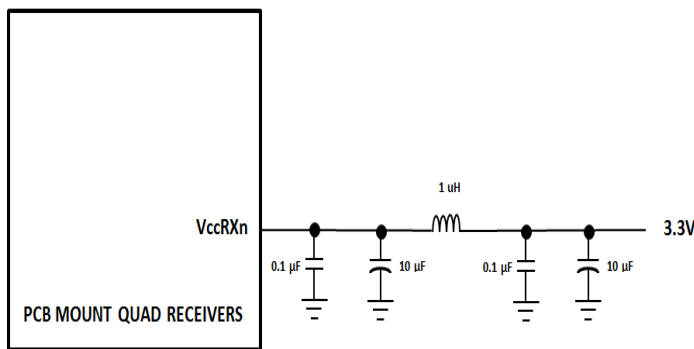

050-337 PRODUCT BRIEF
PCB Mount Quad Receiver
100 Mbps – 5 Gbps, MMF, 3.3V

Required Host Board Components

A power supply noise rejection filter as describe in SFP MSA is required on the host PCB to meet data sheet performance. This is the same filter incorporates an inductor which should be rated 400 mADC and 1 Ω series resistance or better. It should not be replaced with a ferrite. The required filter is illustrated in Figure 5. Also, the host PCB for the PCB mount transceiver requires 4.7 K to 10 K Ω pull-up resistors for TX_FAULT, LOS, SCA and SDL lines.

FIGURE 5 RECOMMENDED HOST BOARD POWER SUPPLY FILTERING CIRCUIT FOR EACH RECEIVER

Fiber Compatibility

The transceiver is capable of transmission at 2 to 550 meters with 50/125 μm fiber, and at 2 to 275 meters with 62.5 125 μm fiber, for 1.25 GBd Ethernet. It is capable of transmission up to 550m with 50/125 μm fiber and up to 300m with 62.5/125 μm fiber, for 1.0625 GBd Fiber Channel.

Electrostatic Discharge (ESD)

The receiver is compatible with ESD levels found in typical manufacturing and operating environments as described JDEC/EIAJESD22-A114-A, Class 1 (<2000Volts) HBM. Glenair recommends that devices are handled with ESD precautions to limit exposure to below 250V HBM.

There are two design cases in which immunity to ESD damage is important. The first case is during handling of the transceiver prior to insertion to the host board. To protect the transceiver, it's important to use standard industry ESD handling precautions. These precautions include using grounded wrist straps, work benches, and floor mats in ESD controlled areas. The ESD sensitivity of the Glenair PCB mount transceiver is compatible with typical industry production environments.

The second case to consider is static discharges to the exterior of the host equipment after installation, in which case the transceiver may be subject to system-level ESD requirements.

050-337 PRODUCT BRIEF
PCB Mount Quad Receiver
100 Mbps – 5 Gbps, MMF, 3.3V

ACCESSORIES

Fiber Optic Jumper Cables to support connection to Mil/Aerospace Connectors

KEY FEATURES:

- Jumper cable between ARINC 801 (end A) and Mil/Aero Connector termini (End B)
- Offered with Multimode fibers

FIGURE 6
Fiber Optic Jumper Cable Assembly (see separate Glenair sales drawing FA02454 for details)

PCB Threaded Inserts, PN 059-0007

KEY FEATURES

- Simplifies installation of PCB Mount Modules eliminating the need for washers and nuts
- Soldered to PCB to eliminate need for handling nuts during assembly
- Existing Options to support PCB thickness from 0.03" to 0.92"
- Can support thicker PCB if required

EVALUATION Boards, PN 050-338, include

- MANUAL with test block diagram, schematic
- Evaluation board PCBA
- 4 fiber optic cables (~1m MMF, ARINC 801 connector to LC connector)
