CMOS IC

STEREO 2.6W AUDIO POWER AMPLIFIER WITH DC VOLUME CONTROL

DESCRIPTION

As an audio power amplifier with DC volume control, UTC **PA7468** is a stereo bridged audio power amplifier. In normal operation it can produce 2.6W (1.8W) into 4Ω with less than 10% (1.0%) THD+N.

In UTC **PA7468**, the attenuator range of the volume control is from 20dB (@DC_V_{OL}=0V) to -80dB (@DC_V_{OL}=3.54V) with 32 steps. Besides, the UTC **PA7468** includes the depop circuitry and the thermal shutdown protection circuitry (to reduce pops and clicks noise during power up or shutdown mode operation).

The **UTC PA7468** has a BTL mode for speaker drive and a SE mode for headphone drive. These two modes can be quickly chosen by the SE/BTL input control pin signal.

FEATURES

- * Low Operating Current: 9mA
- * Two Output Modes Allowable with BTL and SE Modes(chosen by SE/BTL pin)
- * Low Current Consumption :1mA(in Shutdown Mode)
- * With Short Circuit Protection
- * With Thermal Shutdown Protection
- * With Over Current Protection Circuitry
- * Eliminating Turn-on and Turn-off Transients in Outputs by Improved Depop Circuitry to.
- * Very High PSRR
- * 32 Steps Volume Adjustable
- * BTL Mode :2.6W per Channel Output Power into 4Ω Load at 5V

■ PIN CONFIGURATION

■ PIN DESCRIPTION

PIN NO.	PIN NAME	DESCRIPTION
1	MUTE	Input pin for mute controlling: low for normal operation; high to mute.
2	SHUTDOWN	When this pin is pulled low the chip will be into shutdown mode. $I_{SD} = 1\mu A$
3	R _{IN-}	Right channel input pin
4	BYPASS	Pin for bias voltage generator
5,12	GND	Ground
6	L _{IN-}	Left channel input pin
7	VOLUME	Volume gain setting input signal.
8	VOLMAX	Pin for setting the maximum output swing. Inputting V_C to this pin, the output voltage swing will be clamped between $V_{OH} - V_C$ & $V_{OL} + V_C$. Connecting GND to this pin will disable the function. For this pin, the max input voltage must be $\leq 1/2 V_{DD}$.
9	L _{OUT-}	Left channel's negative output in BTL mode; high impedance in SE mode.
10,15	V _{DD}	Supply voltage
11	L _{OUT+}	Left channel's positive output in BTL mode and SE mode
13	SE/BTL	Output mode control input, high :SE output mode ,low :for BTL mode.
14	R _{OUT+}	Right channel's positive output in BTL mode and SE mode
16	R _{OUT-}	Right channel's negative output in BTL mode ; high impedance in SE mode.

■ BLOCK DIAGRAM

■ ABSOLUTE MAXIMUM RATING (unless otherwise specified)

PARAMETER	SYMBOL	RATINGS	UNIT
Supply Voltage	V_{DD}	-0.3 ~ +6.0	V
Input Voltage (SE/BTL, SHUTDOWN, MUTE)	V_{IN}	-0.3 ~ $V_{DD}+0.3$	V
Power Dissipation	P_D	Internal Limited	W
Junction Temperature	T_J	150	°C
Storage Temperature	T_{STG}	-65 ~ +150	°C

Note: Absolute maximum ratings are those values beyond which the device could be permanently damaged.
Absolute maximum ratings are stress ratings only and functional device operation is not implied.
