

### Features

- Wide Frequency Range: 2 GHz to 4 GHz
- Surface Mount SP3T Switch in Compact Outline:
  - 8 mm L x 5 mm W x 2.5 mm H
- Higher Average Power Handling than Plastic Packaged
  - MMIC Switches: 125 W CW
- High RF Peak Power: 500 W
- Low Insertion Loss: 0.85 dB
- Low VSWR: 1.6:1
- Operates From Positive Voltage Only: 5 V & 30 V & -5 V
- RoHS Compliant

Case Style CS242

### Applications

- High Power Transmit/Receive (TR) Switching
- Active Receiver Protection

### Description

The MSWLM2420-242 SP2T Switch-Limiter Module incorporates a high-power SP2T switch with a passive limiter and a fully integrated DC bias network. It is designed to be used in high power switch applications operating from 2 to 4 GHz.

The MSWLM2420-242 is manufactured using a proven hybrid manufacturing process incorporating high voltage PIN diodes and passive devices integrated within a ceramic substrate. This low profile, compact, surface mount component, (8 mm L x 5 mm W x 2.5 mm H) offers superior large and small signal performance comparable to that of MMIC devices in QFN packages. The SP2T Switch-Limiter is designed to minimize Ant-Rx insertion loss in the small-signal receive state and to provide excellent input return loss in the Tx-Ant signal path under large signal (51 dBm CW) conditions while in the transmit state.

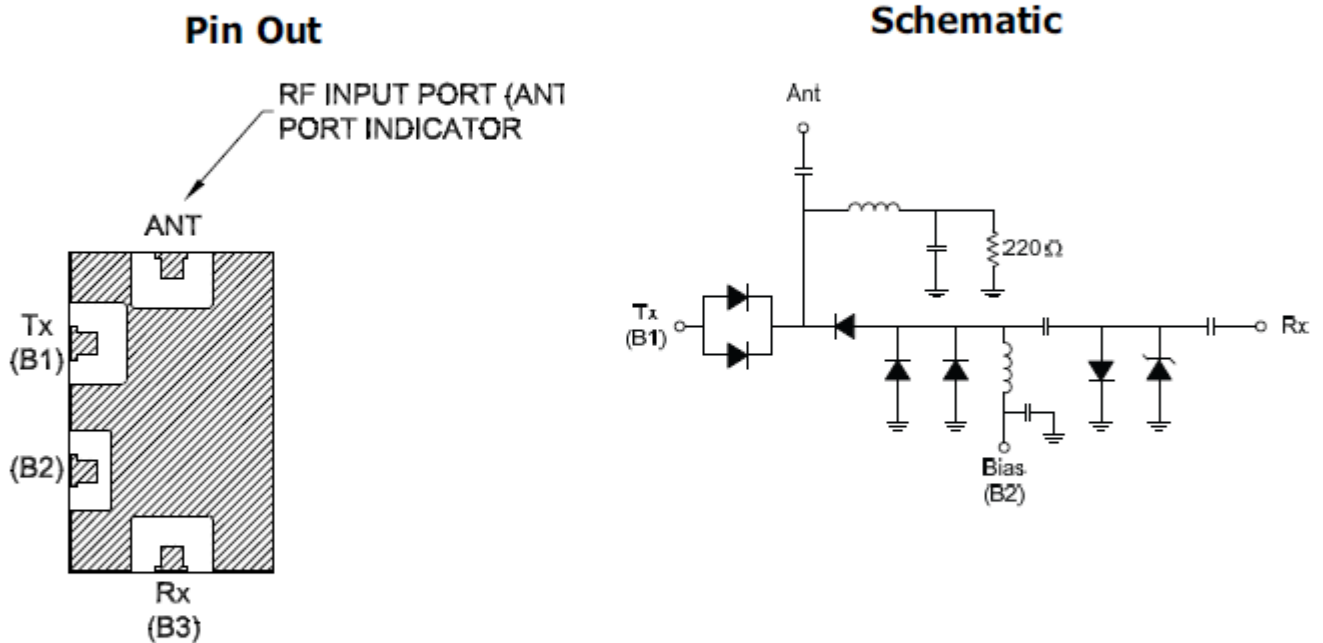

The very low thermal resistance (<40 °C/W) of the PIN diodes in this device enable it to reliably handle RF incident power levels of 51 dBm CW and RF peak incident power levels of 53 dBm in cold switching applications at  $T_a = 85^\circ\text{C}$ . The PIN limiter diode low series resistance (<1.5  $\Omega$ ) produces low flat leakage power (15 dBm), and its small capacitance (<0.15 pF) produces very low insertion loss (<1 dB). This switch-limiter is designed for systems which utilize high volume, surface mount, solder re-flow assembly manufacturing. This product is durable and capable of reliably operating in military, commercial, and industrial environments. It is RoHS compliant.

### Environmental Capabilities

The MSWLM2420-242 Switch-Limiter Module is capable of meeting the environmental requirements of MIL-STD-202 and MIL-STD-750. The package uses a moisture seal enclosure.

### ESD and Moisture Sensitivity Level Rating

PIN diode switches are susceptible to damage from ESD events, as are all semiconductors. The ESD rating for this device is Class 1A, HBM. The moisture sensitivity level rating for this device is MSL 1.

### SP2T Switch Evaluation Board Schematic

### Evaluation Board Description

In the suggested application circuit shown above, the MSWLM2420-242 Switch-Limiter performs active and passive receiver protection. Active receiver protection is effected when the Ant-Tx path is in its low insertion loss state. Large signals incident upon the antenna terminal are directed to the external 50 Ω terminating resistor connected to the Tx port. When the device is biased to

produce low insertion loss in the Ant-Rx path, any large signal incident upon the Ant input port will activate the passive limiter circuit comprising the limiter PIN diode and the Schottky diode located at the Rx output port. This passive limiter circuit produces an impedance mismatch in the Ant-Rx signal path which reflects the large incident signal back towards its source.

### Truth Table – Suggested Application Circuit

Ant – Tx Path	Ant – Rx Path	B1 Bias	B2 Bias	B3 Bias
Low insertion loss	Isolation	30 V (nominal) @ 130 mA (nominal)	-1 V (nominal) @ -25 mA	-5 V @ -25 mA (nominal)
Isolation	Low insertion loss, small RF input signal	-5 V @ 0 mA	4.7 V (nominal) @ 20 mA	5.0 V @ 20 mA (nominal)

### Assembly Instructions

The MSWLM2420-242 Switch-Limiter is capable of being placed onto circuit boards with pick and place manufacturing equipment which utilizes tube or tape-reel dispensing. The device is attached to the circuit board using conventional solder re-flow or wave soldering procedures with RoHS-compliant or Sn60/Pb40 solder per the conditions shown in Table I and Figure I.

### SP2T Switch Outline for Case Style 242 (CS242)

#### Notes:

1. Hatched Metal Area on Circuit Side of Device is RF, D.C., and Thermal Ground.

## RF Circuit Solder Footprint for Case Style 242 (CS242)

The hatched metal area on circuit side of device must be connected via lowest possible impedance to RF and DC ground. It also must be connected via lowest possible thermal impedance to the ambient temperature. Vias should be solid copper fill and gold plated for optimum heat transfer from backside of limiter module through circuit vias to heat sink on back side of PCB.
