

GaAs Multiplier Varactors

M/A-COM Products
V4

Features

- High Cutoff Frequency
- Operating Temperatures From -65°C to +200°C

Description

The MA48700 series of Gallium Arsenide Abrupt Junction Multiplier Varactors is specifically designed to provide single state, high order multiplication at output frequencies extending to approximately 100 GHz. All varactors in this series are available in either package or chip form. The cathode is the heat sink end of the package.

Applications

This series of Gallium Arsenide Multiplier Varactors is intended for medium power harmonic generation with high conversion efficiency. These diodes may be used to double or triple the frequency output of a phase locked source for millimeter wave radar and communication systems for local oscillators and transmitters.

Notes:

1. Junction capacitance (C_{j0}) is measured at 1 MHz and 0 volts on a bridge which has been balanced with a shielded test holder connected in place, but open circuited.
2. Cutoff frequency measurements (FC_0) are made at 0 volts and then extrapolated to -6 volts. See curve of Figure 1 showing typical $FC - 6$ (cutoff at - 6 volts) versus FC_0 (cutoff at 0 volts) performance curve.
3. Available in the case styles 30, 92, 94, 95, 120, 126, 128 and 166. When ordering, specify the case style by adding the case style number as a suffix to the basic part number.
4. Nominal package parasitics (C_p and L_s) are given for each case style with the outline drawing in the appendix section.
