

74ABT162245

16-Bit Transceiver with TRI-STATE® Outputs

General Description

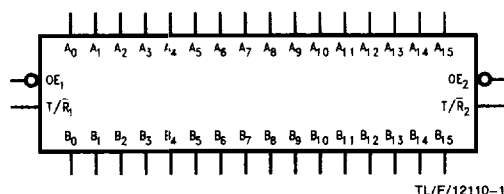

The 'ABT162245 contains sixteen non-inverting bidirectional buffers with TRI-STATE outputs and is intended for bus oriented applications. The device is byte controlled. Each byte has separate control inputs which can be shorted together for full 16-bit operation. The T/\bar{R} inputs determine the direction of data flow through the device. The \overline{OE} inputs disable both the A and B ports by placing them in a high impedance state.

The 25Ω series resistors in the outputs reduce ringing and eliminate the need for external resistors.

Features

- Bidirectional non-inverting buffers
- Separate control logic for each byte
- 16-bit version of the 'ABT2245
- A and B output sink capability of 64 mA, source capability of 32 mA
- Guaranteed output skew
- Guaranteed latchup protection
- High impedance glitch free bus loading during entire power up and power down cycle
- Non-destructive hot insertion capability

Pin Description

Pin Names	Description
\overline{OE}_n	Output Enable Input (Active Low)
T/\bar{R}_n	Transmit/Receive Input
A_0-A_{15}	Side A Inputs/Outputs
B_0-B_{15}	Side B Inputs/Outputs
