● This is a combination of RMC-E15MY type connector that has two power source contacts at the center.

● When using this model for multi-function cards for LAN and MODEM, a variation without the central power source contacts is also available. An example of part No.: RMC-E32RMY-OM()-()

● Some models may not be quickly supplied depending on the configuration of part number (key position and offset dimension). For the availability of the model required, consult your supplier.

● Because misinsertion prevention keys can be freely mounted on any connector, please contact us for locations of misinsertion prevention keys, which are not shown in the following products.
