

Helping Customers Innovate, Improve & Grow

Description

Vectron's VT-501 Temperature Compensated Crystal Oscillator (TCXO) is a quartz stabilized, CMOS output, analog temperature compensated oscillator, operating off either 3.3 or 5.0 volt supply, 9.9x11.8 FR4 board with a nickel cover.

Features

- CMOS Output
- Output Frequencies to 61.440 MHz
- Fundamental Crystal Design
- Optional VCXO Function available
- Gold over nickel contact pads
- Hermetically Sealed Ceramic SMD package
- Product is compliant to RoHS directive  and fully compatible with lead free assembly

Applications

- Wireless Communications
- Base Stations
- Point to point radios
- Broadband Access
- Test Equipment

Block Diagram

Specifications

Table 1. Electrical Performance

Parameter	Symbol	Min.	Typ	Max	Units
Output Frequency	f_o	8		61.440	MHz
Supply Voltage ¹	V_{DD}	+3.3 or +5.0			V
Supply Current, 8-22MHz >22MHz	I_{DD}			15 24	mA
Operating Temperature, <i>ordering option</i>	T_{OP}	0/55, -10/60, -20/70, -30/80, -40/85			°C
Stability Over T_{OP} , <i>ordering option</i>		$\pm 1.0, \pm 1.5, \pm 2.0, \pm 2.5, \pm 3.0, \pm 4.0, \pm 5.0$			ppm
Initial Accuracy, "No Adjust" Option				± 2.0	ppm
Power Supply Stability				± 1.0	ppm
Load Stability				± 0.3	ppm
Aging				± 1.0	ppm/yr
Pull Range	TPR	$\pm 5, \pm 8, \pm 10, \pm 12, \pm 15$			ppm
Control Voltage to reach Pull Range, 5V 3.3V option		0.5 0.3		4.5 3.0	V
Control Voltage Impedance		100			kohm
Output Level ² Output High Output Low Output High Drive Output Low Drive	V_{OH} V_{OL} I_{OH} I_{OL}	$0.9 \cdot V_{DD}$ 4		$0.1 \cdot V_{DD}$ -4	V V mA mA
Output Load			15		pF
Duty Cycle				40/60	%
Phase Noise, 10.000MHz 10Hz 100Hz 1kHz 10kHz 100kHz			-107 -138 -148 -152 -154		dBc/Hz
Start Up Time				10	ms

1. The VT-501 power supply pin should be filtered, eg, a 0.1 and 0.01 uf capacitor
2. The Output is DC coupled
3. Duty Cycle is On Time/Period, see Figure 2. Test Circuit is shown in Figure 1.

VCXO Function

VCXO Feature: The VT-501 can be ordered with a VCXO function for applications where it will be used in a PLL, or the output frequency needs fine tune or calibration adjustments. This is a high impedance input, 1Mohm, and can be driven with an op-amp or terminated with adjustable resistors etc. **Pin 1 should not be left floating on the VCXO optional device.**

“No Adjust” Option: In applications where the VT-501 will not be used in a PLL, or the output frequency does not need fine tune adjustments, the best device to use would be a VT-501-xxx-xxx0. By using the “no adjust” option, the circuit is simplified as V_c does not need to be adjusted or set to a predetermined voltage and pin 1 should be grounded (pin 1 can be left open but should not be set to a voltage such as an RF signal or power supply voltage).

Maximum Ratings

Absolute Maximum Ratings and Handling Precautions

Stresses in excess of the absolute maximum ratings can permanently damage the device. Functional operation is not implied or any other excess of conditions represented in the operational sections of this data sheet. Exposure to absolute maximum ratings for extended periods may adversely affect device reliability.

Although ESD protection circuitry has been designed into the VT-501, proper precautions should be taken when handling and mounting, VI employs a Human Body Model and Charged Device Model for ESD susceptibility testing and design evaluation. ESD thresholds are dependent on the circuit parameters used to define the model. Although no industry standard has been adopted for the CDM a standard resistance of 1.5kOhms and capacitance of 100pF is widely used and therefor can be used for comparison purposes.

Table 3. Maximum Ratings			
Parameter	Symbol	Rating	Unit
Storage Temperature	T_{STORE}	-40/85	°C
Supply Voltage	V_{DD}	7	V
Control Voltage	V_C	0/ V_{DD}	V
ESD, Human Body Model		1000	V
ESD, Charged Device Model		500	V

Table 4. Environmental Compliance	
Parameter	Condition
Mechanical Shock	MIL-STD-883 Method 2002
Mechanical Vibration	MIL-STD-883 Method 2007
Temperature Cycle	MIL-STD-883 Method 1010
Solderability	MIL-STD-883 Method 2003
Fine and Gross Leak	MIL-STD-883 Method 1014
Resistance to Solvents	MIL-STD-883 Method 2015
Moisture Sensitivity Level	MSL1
Contact Pads	Gold over Nickel

Suggested IR Profile

Devices are built using lead free epoxy and can be subjected to standard lead free IR reflow conditions shown in Table 5. Contact pads are gold over nickel and lower maximum temperatures can also be used, such as 220C.

Table 5. Reflow Profile		
Parameter	Symbol	Value
PreHeat Time	t_s T_{s-min} T_{s-max}	200 sec Max 150°C 200°C
Ramp Up	R_{UP}	3°C/sec Max
Time above 217C	t_L	150 sec Max
Time to Peak Temperature	$t_{25-PEAK}$	480 sec Max
Time at 260C	t_p	10 sec Max
Time at 240C	t_{p2}	60 sec Max
Ramp down	R_{DN}	6°C/sec Max

IR Reflow
