# LA7535 — (VIF + SIF) Circuit for B/W TV Applications

Monolithic Linear IC

The LA7535 is an IC that contains the VIF section and SIF section on a single chip and has the RF AGC of forward type most suitable for B/W TV use. The LA7535 can be used in conjunction with the LA7806 or LA7808 to provide the B/W TV function. The LA7535 is provided with two pins for IF AGC, permitting higher AGC speed. Since the LA7535 has the AFT function, it may be also applied for use in low-cost CTV applications.

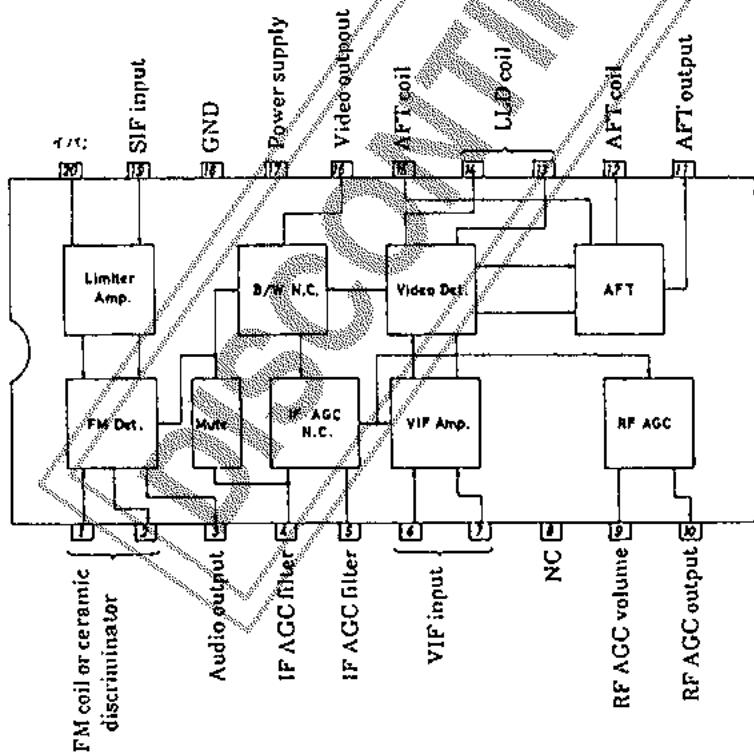

If you want to use a version with the RF AGC of reverse type, the LA7530N is available.

**Functions**

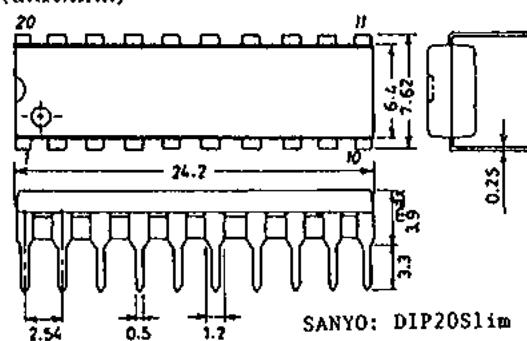

- VIF section: VIF amp, video detector, peak IF AGC, B/W noise canceler, RF AGC, AFT, video mute
- SIF section: SIF limiter amp, FM detector, SND mute

**Features**

- The RF AGC is of forward type most suitable for B/W TV use.
- High-gain VIF amp requiring no preamp
- Two pins for IF AGC permitting higher AGC speed
- The FM detector uses the quadrature detection method. The use of a ceramic discriminator eliminates the need for audio adjust process.
- Since the LA7535 has the AFT function, it may be also applied for use in low-cost CTV applications.
- Small-sized package and minimum number of external parts required. Capable of being operated from 9V supply.

## RF AGC Output Circuit Configuration

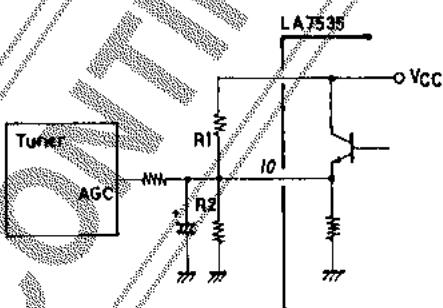

Fig. 1

The RF AGC output circuit is configured as shown Fig. 1. In general, the gain reduction characteristic of a tuner of forward type is as shown in Fig. 2. Control is exercised at more than  $V_1$ . Obtain the ratio of  $R_1, R_2$  referring to the specification for the tuner and fix  $V_1$ .
