64-bit TTL bipolar RAM

DESCRIPTION

This family of Read/Write Random Access Memories is ideal for use in scratch pad and high-speed buffer memory applications.

These products are fully decoded memory arrays with separate input and output lines. They feature PNP inputs and 1 Chip Enable line for ease of memory expansion.

During Write, the outputs of each product assume the logic state defined in the truth table.

Ordering information can be found on the following page.

The 82S25 and 74S189 devices are also processed to military requirements for operation over the military temperature range. For specifications and ordering information, consult the Signetics Military Data Handbook.

FEATURES

- Output access time:
 - N82S25: 50ns max
 - N3101A: 35ns max
 - N74S189: 35ns max
- Power dissipation: 6.25mW/bit, typ
- Input loading: -100 μ A max
- On-chip address decoding
- One Chip Enable input
- Output options:
 - N82S25: Open-Collector
 - N3101A: Open-Collector
 - N74S189: 3-State
- Schottky clamped
- TTL compatible

APPLICATIONS

- Scratch pad memory
- Buffer memory
- Push down stacks
- Control store

NOTES:

1. All voltage measurements are referenced to the ground terminal. Terminals not specifically referenced are left electrically open.
2. Output sink current is supplied through a resistor to V_{CC} .
3. All sense outputs in Low state.
4. Test each input one at a time.
5. Positive current is defined as into the terminal referenced.
6. I_{CC} is measured with the Write Enable and Memory Enable inputs grounded, all other inputs at 0.45V, and the outputs open.

NOTES:

1. Measured at a delta of 0.5V from the logic level with R₁ = 750Ω, R₂ = 750Ω and C_L = 5pF.
2. Measured with minimum t_{WP}.
3. Measured with minimum t_{WSA}.
4. To guarantee a Write into the slowest bit.
