

STAR-LINE

INSERT CONFIGURATION LISTING

for Pyle-Star-Line connectors

introduction

The Pyle-Star-Line Insert Configuration Listing is issued primarily to identify various contact insert arrangements. For the engineer, it provides visual selection of the insert configuration needed to satisfy his requirements. For the end user, the list provides general information useful in the termination of plugs and receptacles. To aid the reader, the insert configurations are presented in numerical order, based on the number of contacts in each.

The male insert illustration shown left (and those on the following pages) is shown as it appears when viewed from the front. Contacts are shown by both physical position within the configuration and by contact number. The contact number corresponds to the contact position shown on the rear face of the insert illustrated as well as to both the front and rear faces of the mating insert. The symbol used to show contact location is indicative of contact size. For example, the contact symbol in this illustration represents a #8 contact. An explanation of contact symbols is presented on each page of the listing. Each drawing also provides data on normal and alternate key positions. Drawings are reduced from actual size of the insert configuration.

Note: Alternate keying or insert polarization is intended to resist improper intermating of plugs and receptacles of like shell sizes and like insert arrangements.

contact insert ordering:

Plug and receptacle contact inserts are selected according to requirements for Service Voltage Rating, Number of Contacts, Wire Size, and Ampere Rating.

Mod I and II inserts may be purchased separately for assembly into the basic barrel. The catalog number for each is shown on the chart accompanying each drawing. Pin or socket inserts are interchangeable in male and female barrels.

Mod III inserts, as a unit, cannot be purchased separately because contact inserts are factory assembled to, and sealed in the basic barrel. The Dash Number given with each Mod III configuration must be shown as a suffix to the basic barrel catalog number to identify the insert desired.

STAR-LINE

electrical ratings

SERVICE VOLTAGE RATINGS:

The voltage to which contact inserts are limited is a function of the dielectric separation between adjacent contacts and between contacts and shell.

The voltage rating is designated by a service voltage rating letter which is shown in the service voltage rating table with each contact configuration listing.

Service Voltage	Military Ratings MIL-C-5015 Specifications Non-Circuit-Breaking		N.E.C. Ratings		Over Surface Distance Inches Nominal	Thru Air Spacing Inches Nominal
	D.C. Volts	A.C. Volts RMS	Non-Circuit Breaking	Circuit Breaking		
Instrument	250	200	...	...	1/16"	...
A	700	500	250	240	1/8"	1/16"
D	1250	900	600	600	3/16"	1/8"
E	1750	1250	600	600	1/4"	3/16"
B	2450	1750	600	600	5/16"	1/4"
C	4200	3000	600	600	1"	5/16"

THREE CLASSIFICATIONS OF AMPERE RATINGS

MS AMPERE RATINGS: (MIL-C-39029)

Based on the combination of the following:

The amount of current which an individual pin and socket contact may carry is a function of contact material and design efficiency of the pin and socket system as well as the ability of the primary conductor insulation to resist temperature rises due to inherent copper losses and bundling factors.

Total current carrying capacity of the connector is a function of the insert temperature which is rated at 225°F for continuous operation. The total operating temperature is the summation of the ambient temperature plus the temperature rise resulting from the thermal losses of each contact.

MIL-W-5088 specifications may be used as a general reference on the subject inasmuch as pertinent cable derating data is included.

N.E.C. NON-CIRCUIT-BREAKING OR DISCONNECT AMPERE RATINGS:

The non-interrupting current ratings, shown in the table, are based on the temperature of the contacts being within the range specified by Underwriter's Laboratories, Inc. when wire sizes are selected in accordance with the National Electrical Code.

When multiple conductors are used, the load factor and temperature rise based on ambient and total insert temperature must be taken into consideration.

N.E.C. CIRCUIT-BREAKING AMPERE RATINGS:

N.E.C. circuit-breaking current ratings indicated in the ampere rating table are based on the ability to connect and disconnect the rated loads. Ratings shown are based on silver plated pin and socket contacts in terms of wire AWG as shown in the table.

Contact Size AWG	Non-Circuit Breaking Ampere Rating		Circuit-Breaking Ampere Rating	†MV DROP	
	MS	N.E.C. **	N.E.C. ***	Solder Contacts	Crimp Contacts
#18	—	9	...	22	30
#16	13	16	10	21	29
#12	23	30	20	20	27
#10	33	40	30	16	26
# 8	46	50	40	12	23
# 4	80	90	60	10	22
#1/0	150	155	100	10	22
#4/0	225	225	200	8	22
350 MCM	...	325	...	8	
500 MCM	...	750	...	.	30

NOTE: The N.E.C. circuit breaking and non-circuit breaking ratings are based on test results of contacts and connectors. Consult the N.E.C. when selecting wire/cable for specific applications. Under certain conditions, a wire size may be rated higher or lower than the table indicates for a given contact size.

†Measurements made at extreme ends of mated contacts with probe touching contact and wire (MIL-C-5015 specification).

**Based on temperature rise (National Electrical Code Requirement).

***Based on Arcing Control (National Electrical Code Requirement).

spare/replacement contacts for mod II and mod III inserts

Contacts are machined copper alloy ranging in size (AWG) from #18 to 500 MCM.

Standard line contacts are silver plated but can also be furnished with gold over silver, gold over nickel, and other combinations of plating systems available upon request.

Pin contacts are of blended geometry to provide extra strength and protection against damage. Socket contacts are the closed entry type.

Contacts for MOD I inserts are not listed because these inserts are factory assembled and damage may be done to the resilient center insulation if contacts are inserted or removed by inexperienced personnel in the field.

thermocouple contacts

Thermocouple contacts are available for use in all insert configurations. Contact can be either purchased separately or included in the insert/connector—please coordinate with the factory on this latter option. For crimp terminations—see tools shown on page 66. When soldering, please adhere to the following procedures: (1) clean wire and solder well with stainless scratch brush. (2) Use Handy and Harman Silver Solder Flux. (3) Use Handy and Harman AMS 2665 Silver Solder with flame torch. **IMPORTANT**—Use extreme care to prevent overheating the female contact, otherwise tension will be lost and result in poor contact. (4) Clean flux from all surfaces using boiling water or steam.

**TABLE—TEMPERATURE RANGE
