

DUAL OUTPUT DRIVER

DESCRIPTION

The CS-2706/CS-3706 series of integrated circuits provide an interface between low-level TTL inputs and high-power switching devices such as power MOSFETs. A typical application is single-ended PWM control to push-pull power control conversion.

The primary function of these devices is to convert a bipolar single-ended low current digital input to a pair of totem pole outputs which can source or sink up to 1.5A each. An internal flip-flop, driven by double-pulse suppression logic, can be enabled to provide single-ended to push-pull conversion. With the flip-flop disabled, the outputs work in parallel for 3.0A capability.

Protection functions are also included for pulse-by-pulse current limiting, automatic deadband control and thermal shutdown.

FEATURES:

- Dual 1.5A Totem Pole Outputs
- 40nsec Rise and Fall into 1000pF
- Parallel or Push-Pull Operation
- Single-Ended to Push-Pull Conversion
- High-Speed Power MOSFET Compatible
- Low Cross-Conduction Current Spike
- Analog Latched Shutdown
- Internal Deadband Inhibit Circuit
- Low Quiescent Current
- 5V to 40V Operation
- Thermal Shutdown Protection

TRUTH TABLE

INV.	N.I.	OUT
H	H	L
L	H	L
L	L	L

$\overline{\text{OUT}} = \overline{\text{INV}}$ and N.I.

$\overline{\text{OUT}} = \text{INV}$ or N.I.

BLOCK DIAGRAM

ABSOLUTE MAXIMUM RATINGS

	N- PACKAGE (Plastic)	UNITS
Logic Supply Voltage (V_{IN} , Pin 14)	40.0	V
Output Supply Voltage (V_C , Pin 8)	40.0	V
Output Current (each output, source, or sink) (pins 6 & 11)		
Steady State	± 500	mA
Peak Transient for Less Than 100 μ s	± 1.5	A
capacitive discharge energy	20.0	μ J
Digital Inputs (pins 2 & 3)	5.5	V
Analog Inputs (pins 9 & 10)	V_{IN}	V
Inhibit Inputs (pins 1, 15, & 16)	5.5	V
Power Dissipation at $T_A=25^\circ\text{C}$	2.0	W
Derate Above 50°C	20.0	mW/ $^\circ\text{C}$
Power Dissipation at T (leads and case)= 25°C	5.0	W
Derate for Ground Lead Temperature Above 25°C	40.0	mW/ $^\circ\text{C}$
Derate for Case Temperature above 25°C	—	mW/ $^\circ\text{C}$

Operating Temperature Range	
CS-2706	-25 to 85°C
CS-3706	0 to 70°C
Storage Temperature Range	-65 to 150°C
Lead Temperature (soldering, 10 sec)	300°C

NOTES: All voltages are with respect to the four ground pins which must be connected together.

All currents are positive into, negative out of the specified terminal.

PIN CONNECTIONS

NOTE: ALL FOUR GROUND PINS MUST BE CONNECTED TO A COMMON GROUND.

ELECTRICAL CHARACTERISTICS These specifications apply over the operating temperature range of the IC. ($V_{IN} = V_C = 20V$, $V_4 = V_5 = V_{12} = V_{13} = 0V$ unless otherwise stated)

CIRCUIT DESCRIPTION

Outputs

The totem-pole outputs have been designed to minimize cross-conduction current spikes while maximizing fast, high-current rise and fall times. Current limiting can be done externally either at the outputs or at the common V_C pin. The output diodes included have slow recovery and should be shunted with high-speed external diodes when driving high-frequency inductive loads.

Flip/Flop

Grounding pin 7 activates the internal flip-flop to alternate the two outputs. With pin 7 open, the two outputs operate simultaneously and can be paralleled for higher current operation. Since the flip-flop is triggered by the digital input, an off-time of at least 200nsec. must be provided to allow the flip/flop to change states. Note that the circuit logic is configured such that the "OFF" state is defined as the outputs low.

Digital Inputs

With both an inverting and non-inverting input available, either active-high or active-low signals may be accepted. These are true TTL compatible inputs—the threshold is approximately 1.2V with no hysteresis; and external pull-up resistors are not required.

Inhibit Circuit

Although it may have other uses, this circuit is included to eliminate the need for deadband control when driving relatively slow bipolar power transistors. A diode from each inhibit input to the opposite power switch collector will keep one output from turning on until the other has turned-

off. The threshold is determined by the voltage on pin 15 which can be set from 0.5 to 3.5V. When this circuit is not used, ground pin 15 and leave 1 and 16 open.

Analog Shutdown

This circuit is included to get a latched shutdown as close to the outputs as possible, from a time standpoint. With an internal 130mV threshold, this comparator has a common-mode range from ground to ($V_{IN} - 3V$). When not used, both inputs should be grounded. The time required for this circuit to latch is inversely proportional to the amount of overdrive but reaches a minimum of 180nsec. As with the flip-flop, an input off-time of at least 200nsec is required to reset the latch between pulses.

Supply Voltage

With an internal 5V regulator, this circuit is optimized for use with a 7 to 40V supply, however, with some slight response time degradation, it can also be driven from 5V. When V_{IN} is low, the entire circuit is disabled and no current is drawn from V_C . When combined with a CS-384X PWM, the Driver Bias switch can be used to supply V_{IN} to the CS-3706. V_{IN} switching should be fast as undefined operation of the outputs may occur with V_{IN} less than 5V.

Thermal Considerations

Should the chip temperature reach approximately $155^\circ C$, a parallel, non-inverting input is activated driving both outputs to the low state.

PACKAGE/TEMPERATURE RANGE OPTIONS

Part Number	Package	Temperature Range	Power @ $25^\circ C$
CS-3706N	16 Pin Plastic Batwing DIP	$0^\circ C$ to $70^\circ C$	2W
CS-2706N	16 Pin Plastic Batwing DIP	$-25^\circ C$ to $+85^\circ C$	2W
