### description

These encoders feature priority decoding of the inputs to ensure that only the highest-order data line is encoded. The 'HC147 encodes nine data lines to four-line (8-4-2-1) BCD. The implied decimal zero condition requires no input condition as zero is encoded when all nine data lines are at a high logic level. The 'HC148 encodes eight data lines to three-line (4-2-1) binary (octal). Cascading circuitry (enable input EI and enable output EO) has been provided to allow octal expansion without the need for external circuitry. For all types, data inputs and outputs are active at the low logic level.

The SN54HC147 and SN54HC148 are characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN74HC147 and SN74HC148 are characterized for operation from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .
