

FPD87392

FPD87392BXB +3.3V TFT-LCD Timing Controller with Dual LVDS Inputs/Dual RSDS Outputs for TFT-LCD Monitor and Notebook (SXGA/SXGA+/UXGA)

Literature Number: SNOSAD3A

FPD87392BXB

+3.3V TFT-LCD Timing Controller with Dual LVDS Inputs/Dual RSDS™ Outputs for TFT-LCD Monitor and Notebook (SXGA/SXGA+/UXGA)

General Description

The FPD87392BXB Panel Timing Controller is an integrated FPD-Link + RSDS™ + TFT-LCD Timing Controller. The logic architecture is implemented using standard and default timing controller functionality based on an Embedded Gate Array. The device is reconfigurable to the needs of a specific application by providing user-defined specifications or customer supplied VHDL/Verilog code.

The FPD87392BXB is a timing controller that combines an LVDS dual pixel input interface with National's Reduced Swing Differential Signaling (RSDS™) output column driver interface for SXGA, SXGA+ and UXGA resolutions. It resides on the TFT-LCD panel and provides the data buffering and control signal generation. The RSDS™ data path to the column driver contributes toward lowering radiated EMI and reduced system dynamic power consumption. The RSDS™ dual 12 pair differential bus conveys up to 24-bit color data for SXGA/SXGA+/UXGA panels when using VESA 60Hz standard timing.

Features

- Input frequency range from 25 MHz to 85 MHz
- Support display resolutions SXGA (1280x1024), SXGA+ (1400x1050) and UXGA (1600x1200)
- Embedded gate array for custom panel timing
- RSDS™ (Reduced Swing Differential Signaling) Column Driver bus for low power and reduced EMI
- Drives RSDS™ column driver up to 170 Mb/s with an 85 MHz clock
- 6 or 8 bit LVDS dual pixel input interface (FPD-Link)
- Virtual 8-bit color depth in FRC mode
- Flexible RSDS™ data output mapping for Bottom or Top mount
- Supports 1 and 2 line inversion mode for RVS output
- Supports Graphics Controllers with spread spectrum interface for lower EMI
- Free Run Mode Function
- Fail-safe function in DE mode (Bonding Option)
- Supports DE mode and SYNC only mode (Bonding Option)
- Power-On-Reset Support
- CMOS circuitry operates from a 3.0V to 3.6V supply
- 128 TQFP package with body size 14mm x 14mm x 1.0mm, 0.4mm Pitch

Functional Description

DUAL FPD-LINK RECEIVERS

The LVDS based FPD-Link Receivers inputs video data and control timing through 8 pairs of LVDS channels plus 2 pairs of LVDS clocks to provide 24-bit color or use only 6 pairs of LVDS channels plus 2 LVDS clocks to provide 18-bit color. The video data is converted to a parallel data stream and routed to the 8-6 bit translator.

SPREAD SPECTRUM SUPPORT

The FPD-Link receiver supports graphics controllers with Spread Spectrum interfaces for reducing EMI. The Spread Spectrum methods supported are Center and Down Spread. A maximum of 2% total is supported at a frequency modulation of 100kHz maximum.

8-6 BIT TRANSLATOR

8-bit data is reduced to a 6-bit data path via a time multiplexed dithering technique or simple truncation of the LSBs. This function is enabled via the input control pins.

DATAPATH BLOCK AND RSDS TRANSMITTER

6(8)-bit video data (RGB) is input to the Datapath Block supports up to an 85 MHz dual pixel rate. The data is delayed to align the Column Driver Start Pulse (STH) with the Column Driver data. The dual data bus (RSR[3:0]P/N, RSG[3:0]P/N, RSB[3:0]P/N) outputs at a 170 MHz rate on 24 differential output channels. The clock is output on the

(Front, Back) RSCKP/N differential pairs. The RSDS Column Drivers latch data on both positive and negative edges of the clock. The swap function provides flexible RSDS data output mappings for either Top or Bottom mount. The RSDS output setup/hold timings are also adjustable through the RSKEW[2:0] input pins.

TIMING CONTROL FUNCTION

The Timing Control function generates control to Column Drivers, Row Drivers, and power supply. The GPOs (General Purpose Outputs) provide for CD latch pulse, REV, and Row Driver control generation. The General Purpose Outputs allow the user to generate control anywhere within the frame data. Standard Row Driver interface or Custom Row Driver interfaces can be implemented with the GPOs (General Purpose Outputs).

RSDS OUTPUT VOLTAGE CONTROL

The RSDS output voltage swing is controlled through an external load resistor connected to the RPI pin. The RSDS output signal levels can be adjusted to suit the particular application. This is dependent on overall LCD module design characteristics such as trace impedance, termination, etc. The RSDS output voltage is inversely related to the RPI value. Lower RPI values will increase the RSDS output voltage swing and consequently overall power consumption will also increase.

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage (V_{DD})	-0.3V to +4.0V
DC TTL Input Voltage (V_{IN})	-0.3V to ($V_{DD} + 0.3V$)
DC LVDS Input Voltage (V_{IN})	-0.3V to ($V_{DD} + 0.3V$)
DC Output Voltage (V_{OUT})	-0.3V to ($V_{DD} + 0.3V$)
Junction Temperature	+150°C
Storage Temperature Range (T_{STG})	-65°C to +150°C
Lead Temperature (T_L) (Soldering 10 sec.)	260°C

ESD Rating:

($C_{ZAP} = 120 \text{ pF}$,
 $R_{ZAP} = 1500W$)

MM = 200V,
HBM = 2000V

Operating Conditions

	Min	Max	Units
Supply Voltage (V_{DD})	3.0	3.6	V
Operating Temp. Range (T_A)	0	70	°C
Supply Noise Voltage		100	mV _{PP}

DC Electrical Characteristics

$T_A = 0^\circ\text{C}$ to 70°C , $V_{DD} = 3.0V$ to $3.6V$, $I_{PI} = 100 \mu\text{A}$ (Unless otherwise specified)

TTL DC Electrical Characteristics

Symbol	Parameter	Conditions	Min	Typ	Max	Units
V_{DD}	Core Supply Voltage		3.0	3.3	3.6	V
V_{IH}	Minimum Input High Voltage		2.0			V
V_{IL}	Maximum Input Low Voltage				0.8	V
V_{OH}	Output High Voltage	$I_{OH} = -8\text{mA}$	$V_{DD} - 0.6$			V
V_{OL}	Output Low Voltage	$I_{OL} = 8 \text{ mA}$			0.4	V
I_{IN}	Input Current	$V_{IN} = V_{DD}, \text{GND}$			± 10	μA
I_{PU}	Pull-Up Current	$V_{DD} = 3.3V, V_{IN} = V_{DD}$			-50	μA
I_{PD}	Pull-Down Current	$V_{DD} = 3.3V, V_{IN} = \text{GND}$			+50	μA
I_{DD}	Average Supply Current	$C_{L(TTL)} = 15 \text{ pF}$, $R_{L(RSDS)} = 100\Omega$ and $C_{L(RSDS)} = 5 \text{ pF}$ (jig & test fixture capacitance), $I_{PI} = 100 \mu\text{A}$ (Typically PI pin connected to 13 k Ω to ground), See Figure 3 for input conditions		170 (CLK = 65 MHz, $V_{DD} = 3.3V$)	250 (CLK = 85 MHz, $V_{DD} = 3.6V$)	mA

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" specifies conditions of device operation.

$T_A = 0^{\circ}\text{C}$ to 70°C , $V_{DD} = 3.0\text{V}$ to 3.6V , $I_{PI} = 100\ \mu\text{A}$ (Unless otherwise specified)

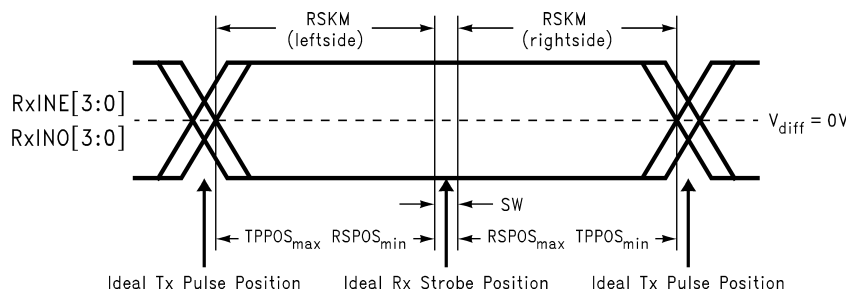

LVDS Data Input

Symbol	Parameter	Conditions	Min	Max	Units
RPLLS	FPD-Link Receiver Phase Lock Loop Wake-up Time			10	ms
RSKM	RxIN Skew Margin (Note 2) and (Figure 7)	$V_{DD} = 3.3\text{V}$, $\text{CLK} = 85\ \text{MHz}$	240		ps

Note 2: Receiver Skew Margin is defined as the valid data sampling region at the receiver inputs. This margin takes into account transmitter pulse positions (min and max) and the receiver input setup and hold time (internal data sampling window: RSPOS). This margin allows for LVDS interconnect skew, inter-symbol interference (both dependent on type and length of cable), and source clock (FPD-Link Transmitter TxCLK IN) jitter. The specified RSKM minimum assumes a TPPOS max of 200 ps.

RSKM = cable skew (type, length) + source clock jitter (cycle to cycle) + remaining margin for data sampling (≥ 0)

This parameter is guaranteed by design. The limits are based on statistical analysis of the device performance over PVT (Process, Voltage, Temperature) range.

20104306

Acronyms:

- RSKM Receiver Skew Margin
- TPPOS Transmitter Pulse Position
- RSPOS Receiver Strobe Position
- SW Strobe Width

Definitions:

- SW: Setup and Hold Time (Internal data sampling window)
- RSKM: Cable Skew (type, length) + Source Clock Jitter (cycle to cycle) + Remaining margin for data sampling (≥ 0)
- Cable Skew: Typically 10 ps – 40 ps per foot.

Note: Note: For 6-bit output mode, RSDS pair 3P/Ns will be in HI-Z mode.

LVDS Input and RSDS Output Data

RxMap	BIT_CFG2	BIT_CFG1	Input Data	Output Data	Functional Description
0	0	0	8-bit	8-bit	Data is unchanged (NS mapping)
0	0	1	8-bit	6-bit	2 MSBs are HI-Z, FRC Enabled (NS)
0	1	0	6-bit	8-bit	2 LSBs are zero (NS)
0	1	1	6-bit	6-bit	2 MSBs are HI-Z (NS)
1	0	0	8-bit	8-bit	Data is unchanged (SS mapping)
1	0	1	8-bit	6-bit	2 MSBs are HI-Z, FRC Enabled (SS)
1	1	0	6-bit	8-bit	2 LSBs are zero (SS)
1	1	1	6-bit	6-bit	2 MSBs are HI-Z (SS)

Input Signal Timing

Sync only mode, no DE inputted, is supported when the SYNC pin (Bonding Option pin) is enable high. Whenever DE signal is inputted, it works as DE mode. In the DE mode, H-blank min is considered with Failure detection mode enabled. In the defaults mode, $T_{\text{valid_H}}$ should be subtracted in the table below.

Graphic Mode	Sync Mode (Bonding Option)						DE Mode		Number of Total Horizontal Lines in a Frame	Number of Total Pixel Clocks in a Horizontal Line
	H-Timing (clocks)			V-Timing (lines)			H-Timing (clocks)	V-Timing (lines)		
	From Sync to Data	Total H-Timing		From Sync to Data	Total V-Timing		H-Blank	H-Blank Detection		
	Typ	Min	Max	Typ	Min	Max	Min	Min		
SXGA	248	1430	2047	38	1066	2047	150	2	1066	1688
SXGA+	128	1550	2047	12	1066	2047	150	2	1066	1688
UXGA	304	1804	4095	46	1250	2047	204	2	1250	2160

Note: H = Lines

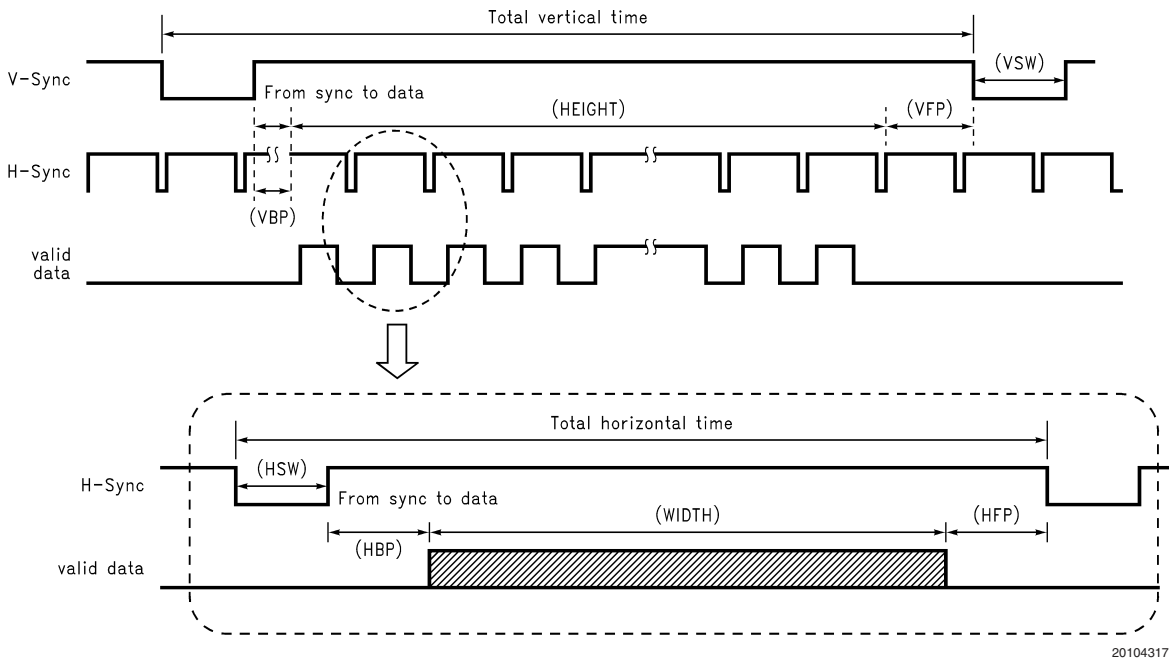

FIGURE 17. Video Signal Format

Supports VESA Standard in SYNC Mode (B/O SYNC Pin = High)

		SXGA	SXGA+	UXGA	Unit
Horizontal	WIDTH	1280	1400	1600	clock
	HFP	48	48	64	clock
	HSW	112	112	192	clock
	HBP	248	128	304	clock
Vertical	HEIGHT	1024	1050	1200	Line
	VFP	1	1	1	Line
	VSW	3	3	3	Line
	VBP	38	12	46	Line

Power Up Sequence (Defaults)

When Power is ON, the TCON start to operate and generate the control signals by inputted LVDS signals. LVDS Receiver will take maximum 10 ms for the PLL wake-up time. Whether LVDS signals exist before the power-on doesn't effect. When the Reset is reach to 2.0V, the R, G, B data and control signals are outputted sequentially and the sequence is just as following figure.

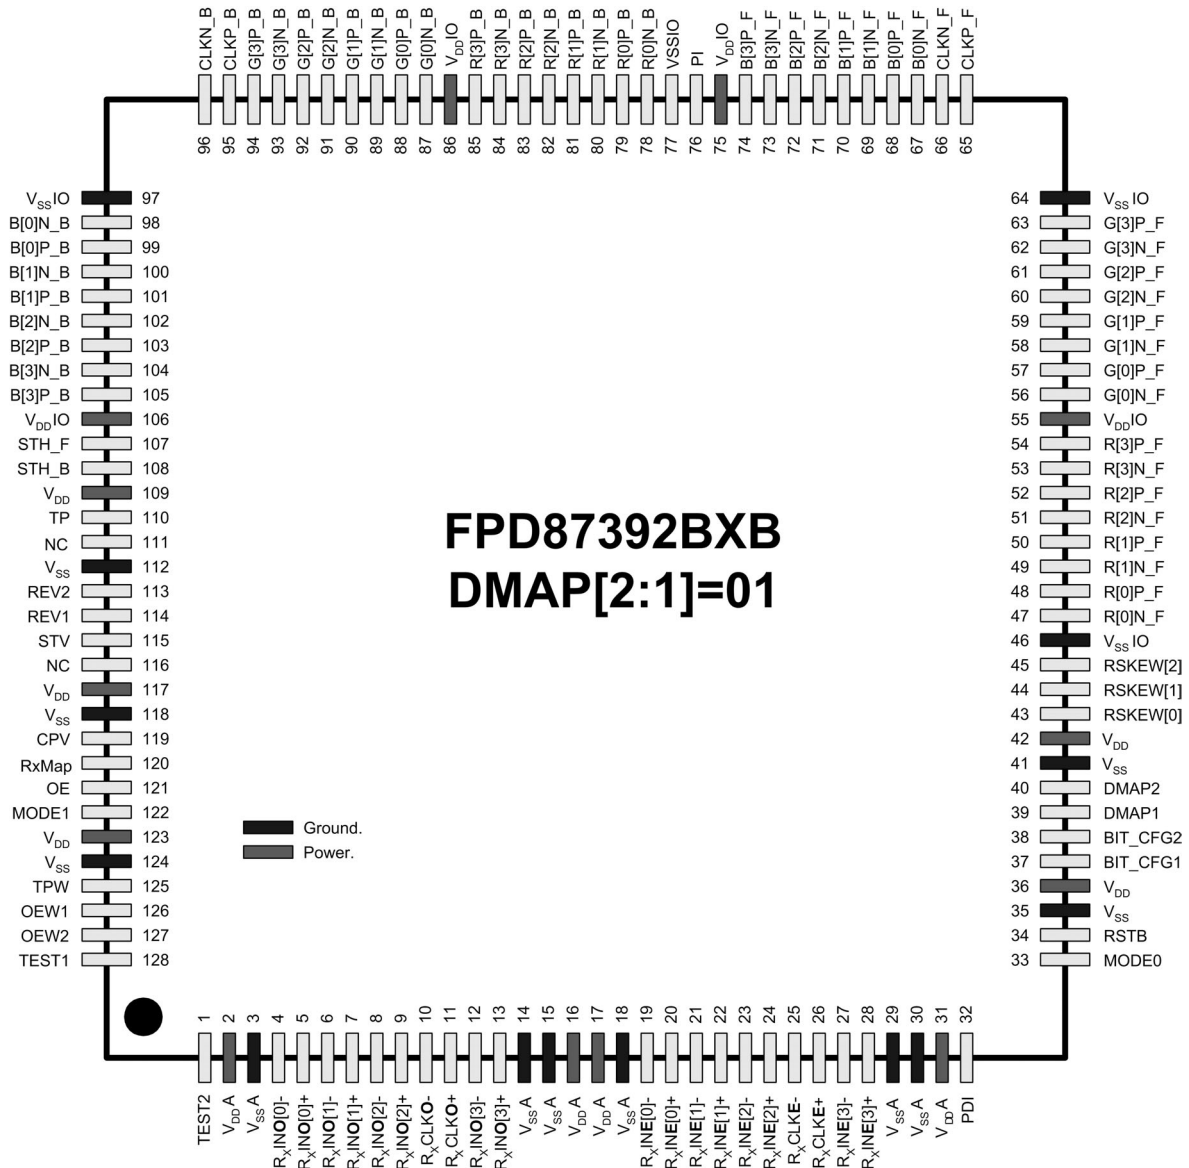

FIGURE 18. Power Up Sequence

V _{DD}	36, 42, 109, 117, 123	P	Digital Power for Logic Core and LVDS Deserializer
V _{SS}	35, 41, 112, 118, 124	G	Digital Ground for Logic Core and LVDS Deserializer
V _{DDA}	2, 16, 17, 31	P	Power for LVDS PLL and Analog Bandgap
V _{SSA}	3, 14, 15, 18, 29, 30	G	Ground for LVDS PLL and Analog Bandgap
V _{DDIO}	55, 75, 86, 106	P	Digital I/O Power and RSDS Outputs
V _{SSIO}	46, 64, 77, 97	G	Digital I/O Ground and RSDS Outputs

Bonding Option (B/O)

Symbol	Pin No.	Type	Function
SYNC	B/O	PU	SYNC Mode High: Enable, Low: Disable
FRM	B/O	PU	Free Run Mode High: Enable, Low: Disable
FDE	B/O	PU	Failure Detection High: Enable, Low: Disable
POR	B/O	PU	Power-On-Reset High: Enable, Low: Disable

Pin Types

I	-Input (3.3V TTL-Compatible)	G	-Ground
TO	-TTL Output (3.3V TTL-Compatible)	PU	-Pull-Up
LVDSI	-Low Voltage Differential Signal Input	PD	-Pull-Down
RSO	-Reduced Swing Differential Output		
P	-Power		

Appendix 1. DE Mode Timing Details

DE Mode (Disabled SYNC Pin)

Always true whenever DE is exist as inputted signal. If V_{SYNC} , H_{SYNC} and DE are available, DE mode is superior and generate the control timing. "V-blank Detection" period is two cycles of the previous DE signals. After the V-blank detection period, "Counter" start to count whenever DE signal available followed on the rising edge.

Case 1: Disabled Failure Detection Mode

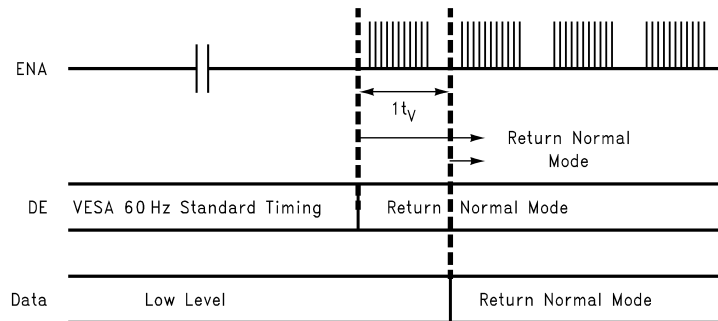

20104323

Case 2: Enabled Failure Detection Mode (SXGA). Please refer to the "Failure Detect" on page 10.

Appendix 2. Free Run Mode Function (B/O Pin FRM "Low" to Disable)

Either input DE signal, ENA, on the DE mode or V_{SYNC} on the SYNC mode are lost more than 5 frames (here, "lost" means ENA or V_{SYNC} signal more than 5 frames without change), then the TCON will enter the Free Run Mode. In the Free Run Mode, the vertical and horizontal period will follow VESA 60 Hz standard and output data will be in the Low Level.

When TCON detects input signal back to normal ("normal" means ENA or V_{SYNC} signal has to change from Low Level to High Level), then output control signals will return to the Normal Mode. In the next frame, output data will also return to Normal Mode.

20104324

Appendix 3. Power-Up Sequence on “POR Enabled” Mode

When Bonding option pins, POR (Power-On-Reset), enable set to “High”, TCON start running as POR mode. If the input LVDS clocks lost with any reasons during the normal operation, POR output signal (RST_N) will be low until LVDS clock comeback again. The Reset counter start to count with LVDS clock resume then turn to normal operation mode before the 10 ms PLL Wake-Up time limits.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

BANNED SUBSTANCE COMPLIANCE

National Semiconductor certifies that the products and packing materials meet the provisions of the Customer Products Stewardship Specification (CSP-9-111C2) and the Banned Substances and Materials of Interest Specification (CSP-9-111S2) and contain no "Banned Substances" as defined in CSP-9-111S2.

National does not assume any responsibility for use of any circuitry described, no circuit patent licenses are implied and National reserves the right at any time without notice to change said circuitry and specifications.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
