Description

Designed with the thin link margins of satellite navigation systems in mind, the A11T Amplifier is a single stage gain block that covers the GPS, Galileo, and GLONASS frequencies. The device features 30dB of gain and a noise figure of less than 1.8dB. Since the product consumes less than 16mA, it is easily powered by any GPS receiver's antenna voltage output.

The A11T is an inline device designed to strengthen the signal and reach of the entire L-band. The A11T amplifier comes with many available options to meet your specific needs.
