

IS31AP2036 HIGH EFFICIENCY, CLASS-K AUDIO POWER AMPLIFIER WITH INTEGRATED CHARGE PUMP CONVERTER

DESCRIPTION

The IS31AP2036 is a Class-K audio power amplifier with high efficiency and automatic gain control. It drives up to 2.0W (10% THD+N) into an 8Ω speaker from a 4.2V VCC supply.

The IS31AP2036 integrates advanced high efficiency charge pump and whole power amplifier efficiency can be up to 75%. The output power will be maintained in 0.8W, 1.0W and 1.2W.

The IS31AP2036 provides low cost, space saving solution for portable equipments which need audio output with higher power by boosting up supply voltage. Its external components just include a few capacitors and resistors (no inductor).

The demo board has four modes to test the functionality of the IS31AP2036.

FEATURES

- Operates from 3.0V to 5.0V
- Ultra low output noise floor
- Low EMI
- -65dB (217Hz) high PSRR
- 0.05% low THD+N
- Pulse Count Control serial interface
- Thermal and short-circuit protection
- Integrated Click-and-Pop suppression circuitry
- Available in FCQFN-16 (2mm × 2mm) package

QUICK START

Figure 1: Photo of IS31AP2036 Evaluation Board

RECOMMENDED EQUIPMENT

- 3.0~5.0V, 2A power supply
- Audio source (i.e. MP3 player, Notebook PC, etc.)
- 8Ω or 4Ω speakers

ABSOLUTE MAXIMUM RATINGS

- ≤ 5.0V power supply

Caution: Do not exceed the conditions listed above, otherwise the board will be damaged.

PROCEDURE

The IS31AP2036 demo board is fully assembled and tested. Follow the steps below to verify board operation.

Caution: Do not turn on the power supply until all connections are completed.

- 1) Connect a 4Ω (or larger) speaker across the OUT-terminal and OUT+ terminal or the RCA female connector (AUDIO OUT).
- 2) Connect the ground terminal of the power supply to the GND (TP1) and the positive terminal to the VCC (TP2). Or connect DC power to connector (DC IN) with a 2.5 mm Jack.
- 3) If the audio source is differential, remove jumper JP2, connect the negative of the audio source to the IN- terminal, and connect the positive of the audio source to IN+ terminal.
- 4) If the audio source is single-ended, connect the audio source to the IN+ terminal, and close jumper JP2; or connect audio source to the audio mono connector (AUDIO IN) and close jumper JP2.
- 5) Turn on the audio source.
- 6) Turn on the power supply

ORDERING INFORMATION

Part No.	Temperature Range	Package
IS31AP2036-CLS2-EB	-40°C ~ +85°C (Industrial)	FCQFN-16, Lead-free

EVALUATION BOARD OPERATION

The IS31AP2036 demo board has an LPC922 MCU to read the status of the button (K1) which select between the different modes. The current operating mode is indicated by the illuminated LED on the left side. The default mode is shutdown.

MODE SETTINGS

The operating mode is controlled by Pulse Count Control (PCC wire) serial interface. The interface records rising edges of the SDB pin and decodes them into 4 operating mode as below.

SDB Status	Function
1 Pulse	Mode1(NCN power 1.2W) $R_L = 8\Omega$
2 Pulse	Mode2(NCN power 1.0W) $R_L = 8\Omega$
3 Pulse	Mode3(NCN power 0.8W) $R_L = 8\Omega$
4 Pulse	Mode4(NCN OFF)
Pull low(1ms)	Shutdown

t_{HI} and t_{LO} are from 0.75µs to 10µs and 2µs is recommended.

Switch modes: it should pull down the SDB pin low over t_{OFF} (recommended 1ms) to shut down the IC and send pulse again to switch modes.

GAIN SETTING

The IS31AP2036 demo board is shipped with a gain of 16.4V/V, and is set by resistors R_{IN} ($R_{Internal}$ (16.5kΩ) + $R_{External}$ (R_7 or R_8)). Change resistors R_7 and R_8 to reconfigure the gain of the board. Gain determined in Equation (1)

$$Gain = \frac{320k\Omega}{R_{Internal} + R_{External}} \left(\frac{V}{V} \right) \quad (1)$$

HIGH-PASS FILTER

The evaluation board's high-pass filter consists of the input capacitors C_{IN} (C_7 or C_8) and R_{IN} ($R_{Internal}$ (16.5kΩ) + $R_{external}$ (R_7 or R_8)). The filter's corner frequency, f_c , is determined by Equation (2).

$$f_c = \frac{1}{(2\pi R_{IN} C_{IN})} \quad (2)$$

SHUTDOWN MODE

Jumper (JP1) controls the shutdown pin of the IS31AP2036 IC. Connect the shunt across pin 1 and 2 of the jumper (JP1) to enter the shutdown mode of the board.
