

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

IEEE1394 1-CHIP OHCI HOST CONTROLLER

The μPD72872 is the LSI which integrated OHCI-Link and PHY function into a single chip.

The μPD72872 complies with the P1394a draft 2.0 specifications and the OpenHCI IEEE1394 1.0, and works up to 400 Mbps.

It makes design so compact for PC and PC card application.

FEATURES

- Shrink from the μPD72870A.
- Compliant with Link Layer Services as defined in 1394 Open Host Controller Interface specification release 1.0
- Compliant with Physical Layer Services as defined in P1394a draft 2.0 (Data Rate 100/200/400 Mbps)
- Numbers of supported port (1, 2 ports) are selectable
- Compliant with protocol enhancement as defined in P1394a draft 2.0
- Modular 32-bit host interface compliant to PCI local bus specification Revision 2.2
- Support PCI-Bus Power Management Interface Specification release 1.1
- Modular 32-bit host interface compliant to Card Bus Specification
- Cycle Master and Isochronous Resource Manager capable
- 32-bit CRC generation and checking for receive/transmit packets
- 4 isochronous transmit DMAs and 4 isochronous receive DMAs supported
- 32-bit DMA channels for physical memory read/write
- Clock generation by 24.576 MHz X'tal
- Internal control and operational registers direct-mapped to PCI configuration space
- 2-wire Serial EEPROM™ interface supported
- Separate power supply Link and PHY

ORDERING INFORMATION

Part number	Package
μPD72872GC-9EV	120-pin plastic TQFP (Fine pitch) (14 x 14)

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.

Not all devices/types available in every country. Please check with local NEC representative for availability and additional information.

1. PIN FUNCTIONS

1.1 PCI/Cardbus Interface Signals: (52 pins)

(1/2)

Name	I/O	Pin No.	IOL	Volts(V)	Function	Block *
PAR	I/O	44	PCI/Cardbus	5/3.3	Parity is even parity across AD0-AD31 and $\overline{\text{CBE0-CBE3}}$. It is an input when AD0-AD31 is an input; it is an output when AD0-AD31 is an output.	Link
AD0-AD31	I/O	9, 10, 12, 13, 15-18, 23, 24, 26-29, 32, 33, 47-50, 52, 53, 55, 56, 58, 59, 62, 63, 65-68	PCI/Cardbus	5/3.3	PCI Multiplexed Address and Data	Link
$\overline{\text{CBE0-CBE3}}$	I	21, 34, 45, 57	-	5/3.3	Command/Byte Enables are multiplexed Bus Commands & Byte enables.	Link
FRAME	I/O	35	PCI/Cardbus	5/3.3	Frame is asserted by the initiator to indicate the cycle beginning and is kept asserted during the burst cycle. If Cardbus mode (CARD_ON = 1), this pin should be pulled up to V _{DD} .	Link
TRDY	I/O	37	PCI/Cardbus	5/3.3	Target Ready indicates that the current data phase of the transaction is ready to be completed.	Link
$\overline{\text{IRDY}}$	I/O	36	PCI/Cardbus	5/3.3	Initiator Ready indicates that the current bus master is ready to complete the current data phase. During a write, its assertion indicates that the initiator is driving valid data onto the data bus. During a read, its assertion indicates that the initiator is ready to accept data from the currently-addressed target.	Link
REQ	O	8	PCI/Cardbus	5/3.3	Bus_master Request indicates to the bus arbiter that this device wants to become a bus master.	Link
GNT	I	7	-	5/3.3	Bus_master Grant indicates to this device that access to the bus has been granted.	Link
IDSEL	I	22	-	5/3.3	Initialization Device Select is used as chip select for configuration read/write transaction during the phase of device initialization. If Cardbus mode (CARD_ON = 1), this pin should be pulled up to V _{DD} .	Link
DEVSEL	I/O	39	PCI/Cardbus	5/3.3	Device Select when actively driven, indicates that the driving device has decoded its address as the target of the current access.	Link
STOP	I/O	40	PCI/Cardbus	5/3.3	PCI Stop when actively driven, indicates that the target is requesting the current bus master to stop the transaction.	Link
PME	O	3	PCI/Cardbus	5/3.3	PME Output for power management enable.	Link

Remark *: If the Link pin is pulled up, it should be connected to L_V_{DD}.

(2/2)

Name	I/O	Pin No.	IOL	Volts(V)	Function	Block *
CLKRUN	I/O	2	PCI/Cardbus	5/3.3	PCICLK Running as input, to determine the status of PCLK; as output, to request starting or speeding up clock.	Link
INTA	O	4	PCI/Cardbus	5/3.3	Interrupt the PCI interrupt request A.	Link
PERR	I/O	41	PCI/Cardbus	5/3.3	Parity Error is used for reporting data parity errors during all PCI transactions, except a Special Cycle. It is an output when AD0-AD31 and PAR are both inputs. It is an input when AD0-AD31 and PAR are both outputs.	Link
SERR	O	42	PCI/Cardbus	5/3.3	System Error is used for reporting address parity errors, data parity errors during the Special Cycle, or any other system error where the effect can be catastrophic. When reporting address parity errors, it is an output.	Link
PRST	I	5	-	5/3.3	Reset PCI reset	Link
PCLK	I	6	-	5/3.3	PCI Clock 33 MHz system bus clock.	Link

Remark *: If the Link pin is pulled up, it should be connected to L_VDD.

1.2 PHY Signals: (16 pins)

Name	I/O	Pin No.	IoL	Volts(V)	Function	Block *
TpA0p	I/O	105	-	-	Port-1 Twisted Pair A Positive Input/Output ^{Note 1}	PHY Analog
TpA0n	I/O	104	-	-	Port-1 Twisted Pair A Negative Input/Output ^{Note 1}	PHY Analog
TpB0p	I/O	103	-	-	Port-1 Twisted Pair B Positive Input/Output ^{Note 1}	PHY Analog
TpB0n	I/O	102	-	-	Port-1 Twisted Pair B Negative Input/Output ^{Note 1}	PHY Analog
TpA1p	I/O	101	-	-	Port-2 Twisted Pair A Positive Input/Output ^{Note 1}	PHY Analog
TpA1n	I/O	100	-	-	Port-2 Twisted Pair A Negative Input/Output ^{Note 1}	PHY Analog
TpB1p	I/O	99	-	-	Port-2 Twisted Pair B Positive Input/Output ^{Note 1}	PHY Analog
TpB1n	I/O	98	-	-	Port-2 Twisted Pair B Negative Input/Output ^{Note 1}	PHY Analog
PORTDIS	I	78			Port Disable This selected state will be loaded to Disabled bit which allocated PHY register Port Status Page. 1:Disable At this time, all ports will be disabled. For normal use, it should be connected to DGND.	PHY Digital
CPS	I	93	-	-	Cable Power Status Input ^{Note2}	PHY Digital
TpBias0	O	97	-	-	Port-1 Twisted Pair Bias Voltage Output ^{Note 1}	PHY Analog
TpBias1	O	96	-	-	Port-2 Twisted Pair Bias Voltage Output ^{Note 1}	PHY Analog
RI0	-	91	-	-	Resistor0 for Reference Current Setting ^{Note 3}	PHY Analog
RI1	-	92	-	-	Resistor1 for Reference Current Setting ^{Note 3}	PHY Analog
XI	I	87	-	-	X'tal XI	PHY Analog
XO	O	88	-	-	X'tal XO	PHY Analog

Notes 1. If unused port, please refer to 4.1.4 Unused Ports.

2. Please refer to 4.1.3 CPS.

3. Please refer to 4.5 RI0, RI1.

1.3 PHY Control Signals: (4 pins)

Name	I/O	Pin No.	IoL	Volts(V)	Function	Block *
PC0-PC2	I	70-72	-	3.3	Power Class Input ^{Note 1}	PHY Digital
P_RESETB	I	81			PHY Power on Reset Input ^{Note 2}	PHY Digital

Notes 1. Please refer to 4.3 PC0-PC2.

2. Please refer to 4.4 P_RESETB.

1.4 PCI/Cardbus Select Signal: (1 pin)

Name	I/O	Pin No.	IoL	Volts(V)	Function	Block *
CARD_ON	I	119	-	3.3	PCI/Card Select (1:Cardbus, 0:PCI bus)	Link

Remark *: If the Link pin is pulled up, it should be connected to L_VDD.

If the PHY Digital pin is pulled up, it should be connected to P_DVDD.

If the PHY Analog pin is pulled up, it should be connected to P_AVDD.

1.5 Serial ROM Interface Signals: (3 pins)

Name	I/O	Pin No.	I _{OL}	Volts(V)	Function	Block *
GROM_SDA	I/O	116	6 mA	3.3	Serial EEPROM Data Input / Output	Link
GROM_SCL	O	117	6 mA	3.3	Serial EEPROM Clock Output	Link
GROM_EN	I	118	-	3.3	Serial EEPROM Enable (1: GUID Load enabled, 0: GUID Load disabled)	Link

1.6 IC: (7 pins)

Name	I/O	Pin No.	I _{OL}	Volts(V)	Function	Block *
IC(H)	I	74, 75	-	-	Internally Connected (High clamped)	PHY Digital
IC(L)	I	76, 77, 114, 115	-	-	Internally Connected (Low clamped)	-
IC(N)	-	85	-	-	Internally Connected (Open)	-

1.7 V_{DD}

Name	I/O	Pin No.	I _{OL}	Volts(V)	Function	Block *
PCI_V _{DD}	-	19, 60	-	5/3.3	V_{DD} for PCI I/Os	Link
L_V _{DD}	-	1, 14, 25, 31, 43, 51, 64	-	3.3	V_{DD} for Link digital Core and Link I/Os	Link
P_DV _{DD}	-	73, 79, 112	-	3.3	PHY digital V_{DD}	PHY Digital
P_AV _{DD}	-	82, 86, 90, 95, 110, 111	-	3.3	PHY Analog V_{DD}	PHY Analog

1.8 GND

Name	I/O	Pin No.	I _{OL}	Volts(V)	Function
DGND	-	11, 20, 30, 38, 46, 54, 61, 69, 80, 113, 120	-	-	Digital GND
AGND	-	83, 84, 89, 94, 106-109	-	-	PHY Analog GND

Remark *: If the Link pin is pulled up, it should be connected to L_V_{DD}.
 If the PHY Digital pin is pulled up, it should be connected to P_DV_{DD}.
 If the PHY Analog pin is pulled up, it should be connected to P_AV_{DD}.

2. PHY REGISTERS

2.1 Complete Structure for PHY Registers

Figure 2-1. Complete Structure of PHY Registers

	0	1	2	3	4	5	6	7
0000	Physical_ID						R	PS
0001	RHB	IBR	Gap_count					
0010	Extended (7)			Reserved	Total_ports			
0011	Max_speed			Reserved	Delay			
0100	Link_active	Contender	Jitter			Pwr_class		
0101	Resume_int	ISBR	Loop	Pwr_fail	Timeout	Port_event	Enab_accel	Enab_multi
0110	Reserved							
0111	Page_select			Reserved	Port_select			
1000	Register0 (page_select)							
1001	Register1 (page_select)							
1010	Register2 (page_select)							
1011	Register3 (page_select)							
1100	Register4 (page_select)							
1101	Register5 (page_select)							
1110	Register6 (page_select)							
1111	Register7 (page_select)							

Table 2-1. Bit Field Description (1/3)

Field	Size	R/W	Reset value	Description
Physical_ID	6	R	000000	Physical_ID value selected from Self_ID period.
R	1	R	0	If this bit is 1, the node is root. 1: Root 0: Not root
PS	1	R		Cable power status. 1: Cable power on 0: Cable power off
RHB	1	R/W	0	Root Hold -off bit. If 1, becomes root at the bus reset.
IBR	1	R/W	0	Initiate bus reset. Setting to 1 begins a long bus reset. Long bus reset signal duration: 166 μs. Returns to 0 at the beginning of bus reset.
Gap_count	6	R/W	111111	Gap count value. It is updated by the changes of transmitting and receiving the PHY configuration packet Tx/Rx. The value is maintained after first bus reset. After the second bus reset it returns to reset value.

Table 2-1. Bit Field Description (2/3)

Field	Size	R/W	Reset value	Description																		
Extended	3	R	111	Shows the extended register map.																		
Total_ports	4	R	0010	Supported port number. 0010: 2 ports																		
Max_speed	3	R	010	Indicate the maximum speed that this node supports. 010: 98.304, 196.608 and 393.216 Mbps																		
Delay	4	R	0010	Indicate worst case repeating delay time. 144 + (2 x 20) = 184 ns																		
Link_active	1	R/W	1	Link active. 1: Enable 0: Disable The logical AND status of this bit and LPS. State will be referred to “L bit” of Self-ID Packet#0. The LPS is a PHY/Link interface signal and is defined in P1394a draft 2.0. It is an internal signal in the μPD72872.																		
Contender	1	R/W	0	Contender. “1” indicate this node support bus manager function. This bit will be referred to “C bit” of Self-ID Packet#0.																		
Jitter	3	R	010	The difference of repeating time (Max.-Min.). (2+1) x 20 = 60 ns																		
Pwr_class	3	R/W	See Description	Power class. Please refer to P1394a draft 2.0 [7.5.1] Table 7-3. <table><tr><th>PC0-PC2</th><th>Description</th></tr><tr><td>000</td><td>Node does not need power and does not repeat power.</td></tr><tr><td>001</td><td>Node is self-powered and provides a minimum of 15 W to the bus.</td></tr><tr><td>010</td><td>Node is self-powered and provides a minimum of 30 W to the bus.</td></tr><tr><td>011</td><td>Node is self-powered and provides a minimum of 45 W to the bus.</td></tr><tr><td>100</td><td>Node may be powered from the bus and is using up to 3 W. No additional power is needed to enable the link.^{Note}</td></tr><tr><td>101</td><td>Reserved for future standardization.</td></tr><tr><td>110</td><td>Node is powered from the bus and is using up to 3 W. An additional 3 W is needed to enable the link.^{Note}</td></tr><tr><td>111</td><td>Node is powered from the bus and is using up to 3 W. An additional 7 W is needed to enable the link.^{Note}</td></tr></table> This bit will be referred to Pwr field of Self-ID Packet#0. The reset data will be determined by PC0-PC2 Pin status.	PC0-PC2	Description	000	Node does not need power and does not repeat power.	001	Node is self-powered and provides a minimum of 15 W to the bus.	010	Node is self-powered and provides a minimum of 30 W to the bus.	011	Node is self-powered and provides a minimum of 45 W to the bus.	100	Node may be powered from the bus and is using up to 3 W. No additional power is needed to enable the link. ^{Note}	101	Reserved for future standardization.	110	Node is powered from the bus and is using up to 3 W. An additional 3 W is needed to enable the link. ^{Note}	111	Node is powered from the bus and is using up to 3 W. An additional 7 W is needed to enable the link. ^{Note}
PC0-PC2	Description																					
000	Node does not need power and does not repeat power.																					
001	Node is self-powered and provides a minimum of 15 W to the bus.																					
010	Node is self-powered and provides a minimum of 30 W to the bus.																					
011	Node is self-powered and provides a minimum of 45 W to the bus.																					
100	Node may be powered from the bus and is using up to 3 W. No additional power is needed to enable the link. ^{Note}																					
101	Reserved for future standardization.																					
110	Node is powered from the bus and is using up to 3 W. An additional 3 W is needed to enable the link. ^{Note}																					
111	Node is powered from the bus and is using up to 3 W. An additional 7 W is needed to enable the link. ^{Note}																					
Resume_int	1	R/W	0	Resume interrupt enable. When set to 1, if any one port does resume, the Port_event bit becomes 1.																		
ISBR	1	R/W	0	Initiate short (arbitrated) bus reset. Setting to 1 acquires the bus and begins short bus reset. Short bus reset signal output : 1.3 μs Returns to 0 at the beginning of the bus reset.																		

Note This link is enabled by the link-on PHY packet described in P1394a draft 2.0 [7.5.2]; this packet may also enable application layers.

Table 2-1. Bit Field Description (3/3)

Field	Size	R/W	Reset value	Description
Loop	1	R/W	0	Loop detection output. 1: Detection Writing 1 to this bit clears it to 0. Writing 0 has no effect.
Pwr_fail	1	R/W	0	Power cable disconnect detect. It becomes 1 when there is a change from 1 to 0 in the CPS bit. Writing 1 to this bit clears it to 0. Writing 0 has no effect.
Timeout	1	R/W	0	Arbitration state machine time-out. Writing 1 to this bit clears it to 0. Writing 0 has no effect.
Port_event	1	R/W	0	Set to 1 when the Int_Enable bit in the register map of each port is 1 and there is a change in the ports connected, Bias, Disabled and Fault bits. Set to 1 when the Resume_int bit is 1 and any one port does resume. Writing 1 to this bit clears it to 0. Writing 0 has no effect.
Enab_accel	1	R/W	0	Enables arbitration acceleration. Ack-acceleration and Fly-by arbitration are enabled. 1: Enabled 0: Disabled If this bit changes while the bus request is pending, the operation is not guaranteed.
Enab_multi	1	R/W	0	Enable multi-speed packet concatenation. Setting this bit to 1 follows multi-speed transmission. When this bit is set to 0, the packet will be transmitted with the same speed as the first packet.
Page_select	3	R/W	000	Select page address between 1000 to 1111. 000: Port Status Page 001: Vendor Definition Page Others: Unused
Port_select	4	R/W	0000	Port Selection. Selecting 000 (Port Status Page) with the page selection selects the port. 0000: Port 0 0001: Port 1 Others: Unused
Reserved	-	R	000...	Reserved. Read as 0.

3.1.1 Offset_00 Vendor ID Register

This register identifies the manufacturer of the μPD72872. The ID is assigned by the PCI_SIG committee.

Bits	R/W	Description
15-0	R	Constant value of 1033H.

3.1.2 Offset_02 Device ID Register

This register identifies the type of the device for the μPD72872. The ID is assigned by NEC Corporation.

Bits	R/W	Description
15-0	R	Constant value of 00CEH.

3.1.3 Offset_04 Command Register

The register provides control over the device's ability to generate and respond to PCI cycles.

Bits	R/W	Description
0	R	I/O enable Constant value of 0. The μPD72872 does not respond to PCI I/O accesses.
1	R/W	Memory enable Default value of 1. It defines if the μPD72872 responds to PCI memory accesses. This bit should be set to one upon power-up reset. 0: The μPD72872 does not respond to PCI memory cycles 1: The μPD72872 responds to PCI memory cycles
2	R/W	Master enable Default value of 1. It enables the μPD72872 as bus-master on the PCI-bus. 0: The μPD72872 cannot generate PCI accesses by being a bus-master 1: The μPD72872 is capable of acting as a bus-master
3	R	Special cycle monitor enable Constant value of 0. The special cycle monitor is always disabled.
4	R/W	Memory write and invalidate enable Default value of 1. It enables Memory Write and Invalidate Command generation. 0: Memory write must be used 1: The μPD72872, when acts as PCI master, can generate the command
5	R	VGA color palette invalidate enable Constant value of 0. VGA color palette invalidate is always disabled.
6	R/W	Parity error response Default value of 0. It defines if the μPD72872 responds to PERR. 0: Ignore parity error 1: Respond to parity error
7	R	Stepping enable Constant value of 0. Stepping is always disabled.
8	R/W	System error enable Default value of 0. It defines if the μPD72872 responds to SERR. 0: Disable system error checking 1: Enable system error checking
9	R	Fast back-to-back enable Constant value of 0. Fast back-to-back transactions are only allowed to the same agent.
15-10	R	Reserved Constant value of 000000.

3.1.4 Offset_06 Status Register

This register tracks the status information of PCI-bus related events which are relevant to the μPD72872. “Read” and “Write” are handled somewhat differently.

Bits	R/W	Description
3-0	R	Reserved Constant value of 0000.
4	R	New capabilities Constant value of 1. It indicates the existence of the Capabilities List.
6,5	R	Reserved Constant value of 00.
7	R	Fast back-to-back capable Constant value of 1. It indicates that the μPD72872, as a target, cannot accept fast back-to-back transactions when the transactions are not to the same agent.
8	R/W	Signaled parity error Default value of 0. It indicates the occurrence of any “Data Parity”. 0: No parity detected (default) 1: Parity detected
10,9	R	DEVSEL timing Constant value of 01. These bits define the decode timing for DEVSEL. 0: Fast (1 cycle) 1: Medium (2 cycles) 2: Slow (3 cycles) 3: undefined
11	R/W	Signaled target abort Default value of 0. This bit is set by a target device whenever it terminates a transaction with “Target Abort”. 0: The μPD72872 did not terminate a transaction with Target Abort 1: The μPD72872 has terminated a transaction with Target Abort
12	R/W	Received target abort Default value of 0. This bit is set by a master device whenever its transaction is terminated with a “Target Abort”. 0: The μPD72872 has not received a Target Abort 1: The μPD72872 has received a Target Abort from a bus-master
13	R/W	Received master abort Default value of 0. This bit is set by a master device whenever its transaction is terminated with “Master Abort”. The μPD72872 asserts “Master Abort” when a transaction response exceeds the time allocated in the latency timer field. 0: Transaction was not terminated with a Master Abort 1: Transaction has been terminated with a Master Abort
14	R/W	Signaled system error Default value of 0. It indicates that the assertion of $\overline{\text{SERR}}$ by the μPD72872. 0: System error was not signaled 1: System error was signaled
15	R/W	Received parity error Default value of 0. It indicates the occurrence of any $\overline{\text{PERR}}$. 0: No parity error was detected 1: Parity error was detected

3.1.5 Offset_08 Revision ID Register

This register specifies a revision number assigned by NEC Corporation for the μPD72872.

Bits	R/W	Description
7-0	R	Default value of 01H. It specifies the silicon revision. It will be incremented for subsequent silicon revisions.

3.1.6 Offset_09 Class Code Register

This register identifies the class code, sub-class code, and programming interface of the μPD72872.

Bits	R/W	Description
7-0	R	Constant value of 10H. It specifies an IEEE1394 OpenHCI-compliant Host Controller.
15-8	R	Constant value of 00H. It specifies an "IEEE1394" type.
23-16	R	Constant value of 0CH. It specifies a "Serial Bus Controller".

3.1.7 Offset_0C Cache Line Size Register

This register specifies the system cache line size, which is PC-host system dependent, in units of 32-bit words. The following cache line sizes are supported: 2, 4, 8, 16, 32, 64, and 128. All other values will be recognized as 0, i.e. cache disabled.

Bits	R/W	Description
7-0	R/W	Default value of 00H.

3.1.8 Offset_0D Latency Timer Register

This register defines the maximum amount of time that the μPD72872 is permitted to retain ownership of the bus after it has acquired bus ownership and initiated a subsequent transaction.

Bits	R/W	Description
7-0	R/W	Default value of 00H. It specifies the number of PCI-bus clocks that the μPD72872 may hold the PCI bus as a bus-master.

3.1.9 Offset_0E Header Type Register

Bits	R/W	Description
7-0	R	Constant value of 00H. It specifies a single function device.

3.1.10 Offset_0F BIST Register

Bits	R/W	Description
7-0	R	Constant value of 00H. It specifies whether the device is capable of Built-in Self Test.

3.1.11 Offset_10 Base Address 0 Register

This register specifies the base memory address for accessing all the “Operation registers” (i.e. control, configuration, and status registers) of the μPD72872, while the BIOS is expected to set this value during power-up reset.

Bits	R/W	Description
11-0	R	Constant value of 000H. These bits are “read-only”.
31-12	R/W	-

3.1.12 Offset_20 Subsystem Vendor ID Register

This register identifies the subsystem that contains the NEC’s μPD72872 function. While the ID is assigned by the PCI_SIG committee, the value should be loaded into the register from the external serial ROM after power-up reset. Access to this register through PCI-bus is prohibited.

Bits	R/W	Description
15-0	R	Default value of 1033H.

3.1.13 Offset_22 Subsystem ID Register

This register identifies the type of the subsystem that contains the NEC’s μPD72872 function. While the ID is assigned by the manufacturer, the value should be loaded into the register from the external serial EEPROM after power-up reset. Access to this register through PCI-bus is prohibited.

Bits	R/W	Description
15-0	R	Default value of 00CEH.

3.1.14 Offset_30 Expansion ROM Base Address Register

This register is not supported by the current implementation of the μPD72872.

Bits	R/W	Description
31-0	R	Reserved Constant value of 0.

3.1.15 Offset_34 Cap_Ptr Register

This register points to a linked list of additional capabilities specific to the μPD72872, the NEC’s implementation of the 1394 OpenHCI specification.

Bits	R/W	Description
7-0	R	Constant value of 60H. The value represents an offset into the μPD72872’s PCI Configuration Space for the location of the first item in the New Capabilities Linked List.

3.1.16 Offset_3C Interrupt Line Register

This register provides the interrupt line routing information specific to the μPD72872, the NEC's implementation of the 1394 OpenHCI specification.

Bits	R/W	Description
7-0	R/W	Default value of 00H. It specifies which input of the host system interrupt controller the interrupt pin of the μPD72872 is connected to.

3.1.17 Offset_3D Interrupt Pin Register

This register provides the interrupt line routing information specific to the μPD72872, the NEC's implementation of the 1394 OpenHCI specification.

Bits	R/W	Description
7-0	R	Constant value of 01H. It specifies PCI INTA is used for interrupting the host system.

3.1.18 Offset_3E Min_Gnt Register

This register specifies how long of a burst period the μPD72872 needs, assuming a clock rate of 33 MHz. Resolution is in units of $\frac{1}{4} \mu s$. The value should be loaded into the register from the external serial EEPROM upon power-up reset, and access to this register through PCI-bus is prohibited.

Bits	R/W	Description
7-0	R	Default value of 00H. Its value contributes to the desired setting for Latency Timer value.

3.1.19 Offset_3F Max_Lat Register

This register specifies how often the μPD72872 needs to gain access to the PCI-bus, assuming a clock rate of 33 MHz. Resolution is in units of $\frac{1}{4} \mu s$. The value should be loaded into the register from the external serial EEPROM after hardware reset, and access to this register through PCI-bus is prohibited.

Bits	R/W	Description
7-0	R	Default value of 00H. Its value contributes to the desired setting for Latency Timer value.

3.1.20 Offset_40 PCI_OHCI_Control Register

This register specifies the control bits that are IEEE1394 OpenHCI specific. Vendor options are not allowed in this register. It is reserved for OpenHCI use only.

Bits	R/W	Description
0	R/W	PCI global SWAP Default value of 0. When this bit is 1, all quadrates read from and written to the PCI Interface are byte swapped, thus a "PCI Global Swap". PCI addresses for expansion ROM and PCI Configuration registers, are, however, unaffected by this bit. This bit is not required for motherboard implementations.
31-1	R	Reserved Constant value of all 0.

3.1.21 Offset_60 Cap_ID & Next_Item_Ptr Register

The Cap_ID signals that this item in the Linked List is the registers defined for PCI Power Management, while the Next_Item_Ptr describes the location of the next item in the μPD72872's Capability List.

Bits	R/W	Description
7-0	R	Cap_ID Constant value of 01H. The default value identified the Link List item as being the PCI Power Management registers, while the ID value is assigned by the PCI SIG.
15-8	R	Next_Item_Ptr Constant value of 00H. It indicated that there are no more items in the Link List.

3.1.22 Offset_62 Power Management Capabilities Register

This is a 16-bit read-only register that provides information on the power management capabilities of the μPD72872.

Bits	R/W	Description
2-0	R	Version Constant value of 010. The power management registers are implemented as defined in revision 1.1 of PCI Bus Power Management Interface Specification.
3	R	PME_clock Constant value of 0.
4	R	Reserved Constant value of 0.
5	R	DSI Constant value of 0.
8,6	R	Aux_current Constant value of 000. The auxiliary current requirement is not supported.
9	R	D1_support Constant value of 0. The μPD72872 does not support the D1 Power Management state.
10	R	D2_support Constant value of 1. The μPD72872 supports the D2 Power Management state.
15-11	R	PME_support Constant value of 01100.

3.1.23 Offset_64 Power Management Control/Status Register

This is a 16-bit read-only register that provides control status information of the μPD72872.

Bits	R/W	Description
1,0	R/W	PowerState Default value is undefined. This field is used both to determine the current power state of the μPD72872 and to set the μPD72872 into a new power state. As D1 is not supported in the current implementation of the μPD72872, writing of '01' will be ignored. 00: D0 (DMA contexts: ON, Link Layer: ON) 01: Reserved (D1 state not supported) 10: D2 (DMA contexts: OFF, Link Layer: OFF, LPS: OFF, $\overline{\text{PME}}$ will be asserted upon LinkON being active) 11: D3 (DMA contexts: OFF, Link Layer: OFF, LPS: OFF, $\overline{\text{PME}}$ will be asserted upon LinkON being active) The LPS is a PHY/Link interface signal and is defined in P1394a draft 2.0. It is an internal signal in the μPD72872.
7-2	R	Reserved Constant value of 000000.
8	R/W	PME_En Default value of 0. This field is used to enable the specific power management features of the μPD72872.
12-9	R	Data_Select Constant value of 0000.
14,13	R	Data_Scale Constant value of 00.
15	R/W	PME_Status Default value is undefined. A write of '1' clears this bit, while a write of '0' is ignored.

3.2 CardBus Mode Configuration Register (CARD_ON = High)

31	24	23	16	15	08	07	00	
Device ID				Vendor ID				00H
Status				Command				04H

Note Different from PCI Bus Mode Configuration Register.

3.2.1 Offset_14/18 Base_Address_1/2 Register (Cardbus Status Registers)

Bits	R/W	Description
7-0	R	Constant value of 00.
31-8	R/W	-

(1) Function Event Register (FER) (Base Address 1 (2)+ 0H)

Bits	R/W	Description
0	R	Write Protect (No Use). Read only as '0'
1	R	Ready Status (No Use). Read only as '0'
2	R	Battery Voltage Detect 2 (No Use). Read only as '0'
3	R	Battery Voltage Detect 1 (No Use). Read only as '0'
4	R/W	General Wakeup
14-5	R	Reserved. Read only as '0'
15	R/W	Interrupt
31-16	R	Reserved. Read only as '0'

(2) Function Event Mask Register (FEMR) (Base Address 1 (2)+ 4H)

Bits	R/W	Description
0	R	Write Protect (No Use). Read only as '0'
1	R	Ready Status (No Use). Read only as '0'
2	R	Battery Voltage Detect 2 (No Use). Read only as '0'
3	R	Battery Voltage Detect 1 (No Use). Read only as '0'
4	R/W	General Wakeup Mask
5	R	BAM. Read only as '0'
6	R	PWM. Read only as '0'
13-7	R	Reserved. Read only as '0'
14	R/W	Wakeup Mask
15	R/W	Interrupt
31-16	R	Reserved. Read only as '0'

(3) Function Reset Status Register (FRSR) (Base Address 1 (2)+ 8H)

Bits	R/W	Description
0	R	Write Protect (No Use). Read only as '0'
1	R	Ready Status (No Use). Read only as '0'
2	R	Battery Voltage Detect 2 (No Use). Read only as '0'
3	R	Battery Voltage Detect 1 (No Use). Read only as '0'
4	R/W	General Wakeup Mask
14-5	R	Reserved. Read only as '0'
15	R/W	Interrupt
31-16	R	Reserved. Read only as '0'

(4) Function Force Event Register (FFER) (Base Address 1 (2)+ CH)

Bits	R/W	Description
0	R	Write Protect (No Use). Read only as '0'
1	R	Ready Status (No Use). Read only as '0'
2	R	Battery Voltage Detect 2 (No Use). Read only as '0'
3	R	Battery Voltage Detect 1 (No Use). Read only as '0'
4	R/W	General Wakeup Mask
14-5	-	No Use
15	R/W	Interrupt
31-16	R	Reserved. Read only as '0'

3.2.2 Offset_28 Cardbus CIS Pointer

This register specifies start memory address of the Cardbus CIS Area.

Bits	R/W	Description
31-0	R	Starting Pointer of CIS Area. Constant value of 00000080H.

3.2.3 Offset_80 CIS Area

The μPD72872 supports external Serial ROM (AT24C02 compatible) interface.

CIS Area Register can be loaded from external Serial ROM in the CIS area when CARD_ON is 1.

4. PHY FUNCTION

4.1 Cable Interface

4.1.1 Connections

Figure 4-1. Cable Interface

4.1.2 Cable Interface Circuit

Each port is configured with two twisted-pairs of TpA and TpB.

TpA and TpB are used to monitor the state of the Transmit/Receive line, control signals, data and cables.

During transmission to the IEEE1394 bus, the Data/Strobe signal received from the Link layer controller is encoded, converted from parallel to serial and transmitted.

While receiving from the IEEE1394 bus, the Data/Strobe signal from TpA, TpB is converted from serial to parallel after synchronization by SCLK ^{Note}, then transmitted to the Link layer controller in 2/4/8 bits according to the data rate of 100/200/400 Mbps.

The bus arbitration for TpA and TpB and the state of the line are monitored by the built-in comparator. The state of the 1394 bus is transmitted to the state machine in the LSI.

Note The SCLK is a PHY/Link interface signal and is defined in P1394a draft 2.0. It is an internal signal in the μPD72872.

4.1.3 CPS

An external resistance of 390 kΩ is connected in series to the power cable to monitor the power of the power cable. If the cable power falls under 7.5 V there is an indication to the Link layer that the power has failed.

4.1.4 Unused Ports

TpAp, TpAn : Not connected

TpBp, TpBn : AGND

TpBias : Not connected

4.2 PLL and Crystal Oscillation Circuit

4.2.1 Crystal Oscillation Circuit

To supply the clock of 24.576 MHz ± 100 ppm, use an external capacitor of 10 pF and a crystal of 50 ppm.

4.2.2 PLL

The crystal oscillator multiplies the 24.576 MHz frequency by 16 (393.216 MHz).

4.3 PC0-PC2

The PC0-PC2 pin corresponds to the power field of the Self_ID packet and Pwr_class in the PHY register. Refer to Section 4.3.4.1 of the IEEE1394-1995 specification for information regarding the Pwr_class. The value of Pwr can be changed with software through the Link layer; this pin sets the initial value during Power-on Reset. Use a pull-up or pull-down resistor of 10 kΩ based on the application.

4.4 $\overline{\text{P_RESETB}}$

Connect an external capacitor of 0.1 μF between the pins $\overline{\text{P_RESETB}}$ and GND. If the voltage drops below 0 V, a reset pulse is generated. All of the circuits are initialized, including the contents of the PHY register.

4.5 RI0, RI1

Connect an external resistor of 9.1 kΩ ± 0.5 % to limit the LSI's current.

5. ELECTRICAL SPECIFICATIONS

Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating	Unit
Power supply voltage	V_{DD}		−0.5 to +4.6	V
Input voltage	V_i	LVTTL @ ($V_i < 0.5\text{ V} + V_{DD}$)	−0.5 to +4.6	V
		PCI @ ($V_i < 3.0\text{ V} + V_{DD}$)	−0.5 to +6.6	V
Output voltage	V_o	LVTTL @ ($V_o < 0.5\text{ V} + V_{DD}$)	−0.5 to +4.6	V
		PCI @ ($V_o < 3.0\text{ V} + V_{DD}$)	−0.5 to +6.6	V
Operating ambient temperature	T_A		0 to +70	°C
Storage temperature	T_{stg}		−65 to +150	°C

Caution Product quality may suffer if the absolute maximum rating is exceeded even momentarily for any parameter. That is, the absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions that ensure that the absolute maximum ratings are not exceeded.

Recommended Operating Ranges

Parameter	Symbol	Condition	Rating	Unit
Power supply voltage	V_{DD}	Used to clamp reflection on PCI bus.	4.5 to 5.5	V
			3.0 to 3.6	V
Operating ambient temperature	T_A		0 to +70	°C

DC Characteristics ($V_{DD} = 3.3 \text{ V} \pm 10 \%$, $V_{SS} = 0 \text{ V}$, $T_A = 0 \text{ to } +70^\circ\text{C}$)

Parameter	Symbol	Condition	MIN.	TYP.	MAX.	Unit
High-level input voltage	V_{IH}		2.0		$V_{DD}+0.5$	V
Low-level input voltage	V_{IL}		-0.5		+0.8	V
High-level output current	I_{OH}	$V_{OH} = 2.4 \text{ V}$, GROM_SDA, GROM_SCL	-6			mA
Low-level output current	I_{OL}	$V_{OL} = 0.4 \text{ V}$, GROM_SDA, GROM_SCL	6			mA
Input leakage current	I_L	$V_{IN} = V_{DD} \text{ or } GND$			± 10.0	μA
PCI interface						
High-level input voltage	V_{IH}		2.0		5.5	V
Low-level input voltage	V_{IL}		-0.5		+0.8	V
High-level output current	I_{OH}	$V_{OH} = 2.4 \text{ V}$	-2			mA
Low-level output current	I_{OL}	$V_{OL} = 0.4 \text{ V}$	9			mA
Input leakage current	I_L	$V_{IN} = V_{DD} \text{ or } GND$			± 10.0	μA
Cable interface						
Differential input voltage	V_{ID}	Cable input, 100 Mbps operation	142		260	mV
		Cable input, 200 Mbps operation	132		260	mV
		Cable input, 400 Mbps operation	118		260	mV
TpB common mode input voltage	V_{ICM}	100 Mbps speed signaling off	1.165		2.515	V
		200 Mbps speed signaling	0.935		2.515	V
		400 Mbps speed signaling	0.523		2.515	V
Differential output voltage	V_{OD}	Cable output (Test load 55Ω)	172.0		265.0	mV
TpA common mode output voltage	V_{OCM}	100 Mbps speed signaling off	1.665		2.015	V
		200 Mbps speed signaling	1.438		2.015	V
		400 Mbps speed signaling	1.030		2.015	V
TpA common mode output current	I_{CM}	100 Mbps speed signaling off	-0.81		+0.44	mA
		200 Mbps speed signaling	-4.84		-2.53	mA
		400 Mbps speed signaling	-12.40		-8.10	mA
Power status threshold voltage	V_{TH}	CPS			7.5	V
TpBias output voltage	V_{TPBIAS}		1.665		2.015	V

- Remarks**
1. Digital core runs at 3.3 V.
 2. PCI Interface can run at 5 or 3.3 V, depending on the choice of 5 V-PCI or 3.3 V-PCI.
 3. All other I/Os are 3.3 V driving, and 5 V tolerant.
 4. 5 V are used only for 5 V-PCI clamping diode.

AC Characteristics**PCI Interface**

See PCI local bus specification Revision 2.2.

Serial ROM Interface

See AT24C01A/02/04/08/16 Spec. Sheet.

6. PACKAGE DRAWING

120-PIN PLASTIC TQFP (FINE PITCH) (14x14)

NOTE

Each lead centerline is located within 0.09 mm of its true position (T.P.) at maximum material condition.

★ 7. RECOMMENDED SOLDERING CONDITIONS

The μPD72850A should be soldered and mounted under the following recommended conditions.

For the details of the recommended soldering conditions, refer to the document **Semiconductor Device Mounting Technology Manual (C10535E)**.

For soldering methods and conditions other than those recommended below, contact your NEC sales representative.

Table 7-1. Surface Mounting Type Soldering Conditions

μPD72872GC-9EV: 120-pin plastic TQFP (Fine pitch) (14 x 14)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 235°C, Time: 30 sec. Max. (at 210°C or higher). Count: three times or less Exposure limit: 3 days ^{Note} (after that prebake at 125°C for 10 hours)	IR35-103-3
Partial heating	Pin temperature: 300°C Max., Time: 3 sec. Max. (per pin row)	—

Note After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

EEPROM and Firewarden are trademarks of NEC Corporation.

- **The information in this document is current as of November, 2000. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC's data sheets or data books, etc., for the most up-to-date specifications of NEC semiconductor products. Not all products and/or types are available in every country. Please check with an NEC sales representative for availability and additional information.**
- No part of this document may be copied or reproduced in any form or by any means without prior written consent of NEC. NEC assumes no responsibility for any errors that may appear in this document.
- NEC does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC semiconductor products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of customer's equipment shall be done under the full responsibility of customer. NEC assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC endeavours to enhance the quality, reliability and safety of NEC semiconductor products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC semiconductor products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment, and anti-failure features.
- NEC semiconductor products are classified into the following three quality grades:
 "Standard", "Special" and "Specific". The "Specific" quality grade applies only to semiconductor products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of a semiconductor product depend on its quality grade, as indicated below. Customers must check the quality grade of each semiconductor product before using it in a particular application.
 "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
 "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
 "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.
 The quality grade of NEC semiconductor products is "Standard" unless otherwise expressly specified in NEC's data sheets or data books, etc. If customers wish to use NEC semiconductor products in applications not intended by NEC, they must contact an NEC sales representative in advance to determine NEC's willingness to support a given application.
 (Note)
 (1) "NEC" as used in this statement means NEC Corporation and also includes its majority-owned subsidiaries.
 (2) "NEC semiconductor products" means any semiconductor product developed or manufactured by or for NEC (as defined above).
