

RF TUNEABLE COILS - HIGH FREQUENCY

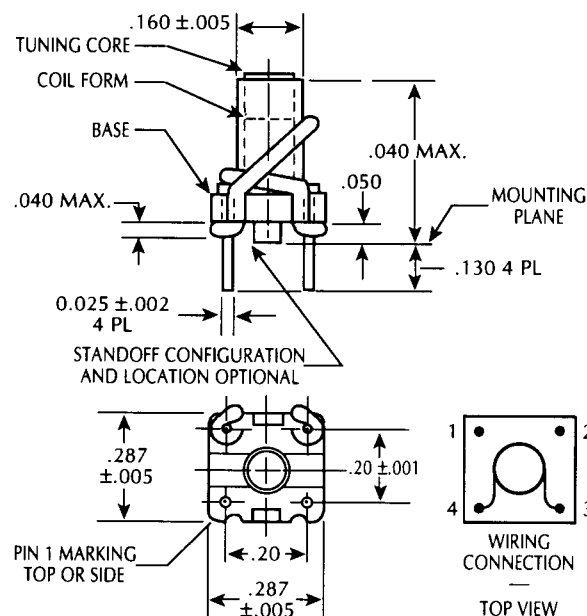

Features:

- Application frequency from 50 MHz to 100 MHz
- Standard inductance values range from 12.0 μ H to 860.0 μ H
- Coil form material is a glass epoxy lamination for higher temperature
- Available unshielded or shielded with an optional plated brass can that provides shielding and mechanical stability
- Core does not protrude past coil form between min. & max. settings
- Tapped windings, and numerous core materials and core lengths are available for custom designs - Consult Factory

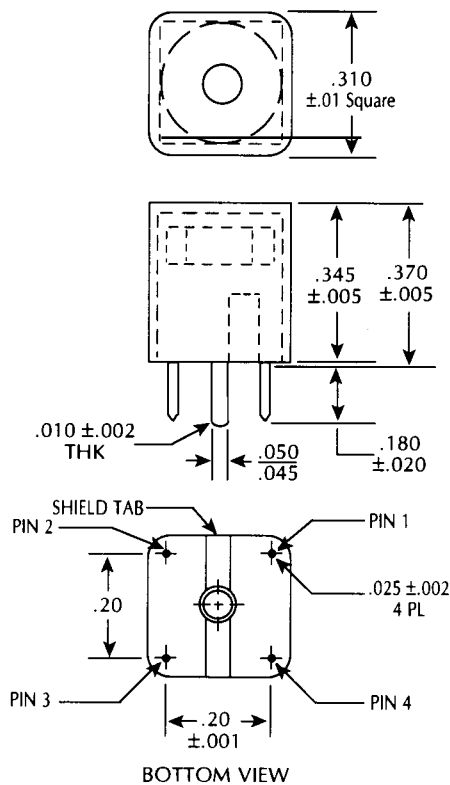

DIMENSIONS (Inches)

Unshielded

Shielded

FETCO ORDERING INFORMATION

FTHF - 2 - 147.5

1 2 3

1. FETCO type
2. Unshielded: (1) or Shielded: (2)
3. Inductance value @ Nominal

Notes:

1. Standard core materials are Carbonyl SF, E, and J.
2. All "Q" measurements are made on a HP-4342A "Q" meter.
3. Inductance measurements are made on a HP-4191A.
