The PTV12010 is a non-isolated dc-dc converter from Artesyn under the Point of Load Alliance (POLA) standard. The vertical mounting option of the PTV12010 module provides performance in less than 20% of the space that is required by alternative solutions. The Auto-Track™ feature provides for sequencing between multiple modules, a function, which is becoming a necessity for powering advanced silicon including DSP's, FPGA's and ASIC's requiring controlled power-up and power-down. The PTV12010 has an input voltage of 10.8 Vdc to 13.2 Vdc and offers a wide 1.2 Vdc to 5.5 Vdc for suffix 'W' and 0.8 Vdc to 1.8 Vdc for suffix 'L' output voltage range with up to 8 A output current, which allows for maximum design flexibility and a pathway for future upgrades.

2 YEAR WARRANTY

All specifications are typical at nominal input, full load at 25 °C unless otherwise stated  
 $C_{in} = 100 \mu F$  and  $10 \mu F$  (Ceramic),  $C_{out} = 0 \mu F$

**PTV12010WAH**

**Output Voltage Adjustment of the PTV12010 Series**

The ultra-wide output voltage trim range offers major advantages to users who select the PTV12010. It is no longer necessary to purchase a variety of modules in order to cover different output voltages. The output voltage can be trimmed in a range of 1.2 Vdc to 5.5 Vdc for suffix 'W' and 0.8 Vdc to 1.8 Vdc for suffix 'L'. When the PTV12010 converter leaves the factory the output has been adjusted to the default voltage of 1.2 V for the PTV12010W and 0.8 V for PTV12010L.

$V_O = 1.2 \text{ V}$	84%

**Notes**

- Remote ON/OFF. Positive logic  
ON: Pin 7 open; or  $V > 2 \text{ V}$   
OFF: Pin 7 GND; or  $V < 0.6 \text{ V}$
- See Figures 1, 2, 3 and 6 for safe operating curves.
- A 100  $\mu\text{F}$  electrolytic input capacitor is required for proper operation as well as a 10  $\mu\text{F}$  high-frequency ceramic capacitor. The electrolytic capacitor must be rated for the minimum rms of ripple current.
- An external output capacitor is not required for basic operation. Adding 100  $\mu\text{F}$  of distributed capacitance at the load will improve the transient response.
- 1 A/ $\mu\text{s}$  load step, 50 to 100%  $I_{O\text{MAX}}$ ,  $C_3 = 100 \mu\text{F}$ .
- If utilized  $V_{\text{out}}$  will track applied voltage by  $\pm 0.3 \text{ V}$  (up to  $V_O$  set point).
- The pre-bias start-up feature is not compatible with Auto-Track™. This is because when the module is under Auto-Track™ control, it is fully active and will sink current if the output voltage is below that of a back-feeding

source. Therefore to ensure a pre-bias hold-off, one of the following two techniques must be followed when input power is first applied to the module. The Auto-Track™ function must either be disabled, or the module's output held off using the Inhibit pin. Refer to Application Note 196 for more details.

- The set-point voltage tolerance is affected by the tolerance and stability of  $R_{\text{set}}$ . The stated limit is unconditionally met if  $R_{\text{set}}$  has a tolerance of 1% with 100°C or better temperature stability.
- To order Pb-free (RoHS compatible) through-hole parts replace the mounting option 'H' with 'D', e.g. PTV12010WAD.
- NOTICE: Some models do not support all options. Please contact your local Artesyn representative or use the on-line model number search tool at <http://www.artesyn.com/powergroup/products.htm> to find a suitable alternative.
