Data Sheet

Description

Avago Technologies MGA-31289 is a 0.25W high gain driver amplifier MMIC with good gain flatness, housed in a standard SOT-89 plastic package. The device features high linearity performance, excellent input and output return loss, and low noise figure. The device can be easily matched to obtain optimum power and linearity.

MGA-31289 is externally tunable to operate within 1.5GHz to 3GHz frequency range applications. With high IP3, low noise figure and wideband operation, MGA-31289 may be utilized as a driver amplifier in the transmit chain and as a second stage LNA in the receive chain.

This device uses Avago Technologies proprietary 0.25um GaAS Enhancement mode PHEMT process.

MGA-31289 is an input and output prematched driver amplifier. To bias MGA-31289, a +5V supply (Vdd) is connected to the output pin through a RF choke, L1 (which isolates the inband signal from the DC supply). The bypass capacitors (C1, C2 and C3) help to eliminate out of band low frequency signals from the power supply. Blocking capacitors are required for its input (C7) and output (C8), to isolate the supply voltage from preceding and succeeding circuits. C7 also plays a part in input tuning to improve input return loss while L1 and C8 help in output matching. The recommended output tuning is for achieving best OIP3, while meeting typical specifications for other parameters.
