

Optocoupler with Phototransistor Output

Description

The CNY64/ 65/ 66 consist of a phototransistor optically coupled to a gallium arsenide infrared-emitting diode in a 4-lead plastic package.

The single components are mounted in opposite oneanother, providing a distance between input and output for highest safety requirements of > 3 mm.

Application

Circuits for safe protective separation against electrical shock according to safety class II (reinforced isolation):

- For application class I - IV at mains voltage ≤ 300 V
- For application class I - IV at mains voltage ≤ 600 V
- For application class I - III at mains voltage ≤ 1000 V according to VDE 0884, table 2, suitable for:

Switch-mode power supplies, computer peripheral interface, microprocessor system interface, line receiver.

Features

- Approvals:
BSI: BS 415, BS 7002
FIMKO (SETT): EN 950
 Underwriters Laboratory (UL) 1577
 recognized-file No. E-76222
VDE 0884 Certificate number 76814

VDE 0884 related features:

- Rated impulse voltage (transient overvoltage)
 $V_{10TM} = 8 \text{ kV peak}$
- Isolation test voltage (partial discharge test voltage)
 $V_{pd} = 2.8 \text{ kV peak}$
- Rated insulation voltage (RMS includes DC)
 $V_{IOWM} = 1000 V_{RMS} (1450 \text{ V peak})$
- Rated recurring peak voltage (repetitive)
 $V_{IORM} = 1000 V_{RMS}$
- Creepage current resistance according to
 VDE 0303/IEC 112
 Comparative Tracking Index: (CTI) = 200
- Thickness through insulation > 3 mm

General features:

- Isolation materials according to UL94-VO
- Pollution degree 2
 (DIN/VDE 0110 part 1 resp. IEC 664)
- Climatic classification 55/085/21 (IEC 68 part 1)
- Special construction:
 Therefore extra low coupling capacity
 typical 0.3 pF, high Common Mode Rejection
- Low temperature coefficient of CTR
- Current Transfer Ratio (CTR) = 50 to 300%
- CNY64/65 also available in CTR groups A and B

Ozone Depleting Substances Policy Statement

It is the policy of **TEMIC TELEFUNKEN microelectronic GmbH** to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

TEMIC TELEFUNKEN microelectronic GmbH semiconductor division has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

TEMIC can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

We reserve the right to make changes to improve technical design and may do so without further notice.

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use **TEMIC** products for any unintended or unauthorized application, the buyer shall indemnify **TEMIC** against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
