Filters, Chokes and Braking Resistors - for use with Parker Servo Drives | #BRM13/01

Parker offers a wide range of braking resistors to permit the dissipation of regenerative energy that can be created by a servo drive system during braking operations.

Technical Specifications

Product Type:	Braking Resistor	Compatible Series:	Compax3
Application:	For use with PSUP10 / PSUP20 (2x parallel)	Available Accessories:	BRM13/01 : 30 Ohm / 0.50 kW
Product Type:	BRM13/01 : Braking Resistor - 30 Ohm / 0.50 kW		

Item Information

In a servo drive system the regenerative energy generated by the motor during any braking operation is absorbed back into the servo drive. If the internal capacity of the drive is too small then this braking energy must be dissipated externally, typically via an additional braking resistor. Parker offers a wide range of braking resistors to permit the dissipation of this regenerative energy.
