

SONY.**CXB1545Q-Y**

Dual 8: 1 Multiplexer with D-F.F.

*T-68-11-51***Description**

The CXB1545Q-Y is an ultra high speed monolithic ECL IC, which contains two 8: 1 multiplexers followed by D type flip flops. The data select (S₀-S₂) inputs determine which data is enabled. The selected data is transferred to the flip flops output by the positive transition of clocks (C₁, C₂) input. The Master Reset overrides all other control inputs and turns Q outputs to LOW.

Features

- Typical clock rate up to 2.3 GHz
- Differential outputs
- Internal pull down resistors on input pins to maintain logic LOW level with the pins left open
- ECL 100K compatible I/O levels
