

## HIP4082

80V, 1.25A Peak Current H-Bridge FET Driver

FN3676

Rev 5.00

September 30, 2015

The HIP4082 is a medium frequency, medium voltage H-Bridge N-Channel MOSFET driver IC, available in 16 lead plastic SOIC (N) and DIP packages.

Specifically targeted for PWM motor control and UPS applications, bridge based designs are made simple and flexible with the HIP4082 H-bridge driver. With operation up to 80V, the device is best suited to applications of moderate power levels.

Similar to the HIP4081, it has a flexible input protocol for driving every possible switch combination except those which would cause a shoot-through condition. The HIP4082's reduced drive current allows smaller packaging and it has a much wider range of programmable dead times (0.1 to 4.5 $\mu$ s) making it ideal for switching frequencies up to 200kHz. The HIP4082 does not contain an internal charge pump, but does incorporate non-latching level-shift translation control of the upper drive circuits.

This set of features and specifications is optimized for applications where size and cost are important. For applications needing higher drive capability the HIP4080A and HIP4081A are recommended.

### Features

- Independently Drives 4 N-Channel FET in Half Bridge or Full Bridge Configurations
- Bootstrap Supply Max Voltage to 95VDC
- Drives 1000pF Load in Free Air at 50°C with Rise and Fall Times of Typically 15ns
- User-Programmable Dead Time (0.1 to 4.5 $\mu$ s)
- DIS (Disable) Overrides Input Control and Refreshes Bootstrap Capacitor when Pulled Low
- Input Logic Thresholds Compatible with 5V to 15V Logic Levels
- Shoot-Through Protection
- Undervoltage Protection
- Pb-Free Plus Anneal Available (RoHS Compliant)

### Applications

- UPS Systems
- DC Motor Controls
- Full Bridge Power Supplies
- Switching Power Amplifiers
- Noise Cancellation Systems
- Battery Powered Vehicles
- Peripherals
- Medium/Large Voice Coil Motors
- Related Literature

## Ordering Information

PART NUMBER	PART MARKING	TEMP. RANGE (°C)	PACKAGE	PKG. DWG. #
HIP4082IB*	HIP4082IB	-55 to +125	16 Ld SOIC (N)	M16.15
HIP4082IBZ* (Note)	4082IBZ	-55 to +125	16 Ld SOIC (N) (Pb-free)	M16.15
HIP4082IP (No longer available, recommended replacement: HIP4082IPZ)	HIP4082IP	-55 to +125	16 Ld PDIP	E16.3
HIP4082IPZ (Note)	HIP4082IPZ	-55 to +125	16 Ld PDIP** (Pb-free)	E16.3

\*Add "T" suffix for tape and reel.

NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

\*\*Pb-free PDIPs can be used for through hole wave solder processing only. They are not intended for use in Reflow solder processing applications.

## Pinout

**Application Block Diagram**

**Functional Block Diagram**

**Absolute Maximum Ratings**

Supply Voltage,  $V_{DD}$  ..... -0.3V to 16V  
 Logic I/O Voltages ..... -0.3V to  $V_{DD} + 0.3V$   
 Voltage on AHS, BHS ..... -6V (Transient) to 80V (25°C to 150°C)  
 Voltage on AHS, BHS ..... -6V (Transient) to 70V (-55°C to 150°C)  
 Voltage on AHB, BHB .....  $V_{AHS, BHS} - 0.3V$  to  $V_{AHS, BHS} + V_{DD}$   
 Voltage on ALO, BLO .....  $V_{SS} - 0.3V$  to  $V_{DD} + 0.3V$   
 Voltage on AHO, BHO .....  $V_{AHS, BHS} - 0.3V$  to  $V_{AHB, BHB} + 0.3V$  Input  
 Current, DEL ..... -5mA to 0mA  
 Phase Slew Rate ..... 20V/ns  
 NOTE: All voltages are relative  $V_{SS}$  unless otherwise specified.

**Thermal Information**

Thermal Resistance  $\theta_{JA}$  (°C/W)  
 SOIC Package ..... 115  
 DIP Package ..... 90  
 Maximum Power Dissipation ..... See Curve  
 Storage Temperature Range ..... -65°C to +150°C  
 Operating Max. Junction Temperature ..... +150°C  
 Lead Temperature (Soldering 10s) ..... +300°C  
 (For SOIC - Lead Tips Only)

**Operating Conditions**

Supply Voltage,  $V_{DD}$  ..... +8.5V to +15V  
 Voltage on  $V_{SS}$  ..... -1.0V to +1.0V  
 Voltage on AHB, BHB .....  $V_{AHS, BHS} + 7.5V$  to  $V_{AHS, BHS} + V_{DD}$   
 Input Current, DEL ..... -4mA to -100µA

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

**Electrical Specifications**  $V_{DD} = V_{AHB} = V_{BHB} = 12V, V_{SS} = V_{AHS} = V_{BHS} = 0V, R_{DEL} = 100K$

PARAMETER	SYMBOL	TEST CONDITIONS	$T_J = +25^\circ C$			$T_J = -55^\circ C$ TO $+150^\circ C$		UNITS

**TRUTH TABLE**

INPUT					OUTPUT	
ALI, BLI	AHI, BHI	VDDUV	VHBUV	DIS	ALO, BLO	AHO, BHO
X	X	X	X	1	0	0
X	X	1	X	X	0	0
0	X	0	1	0	0	0
1	X	0	X	0	1	0
0	1	0	0	0	0	1
0	0	0	0	0	0	0

NOTE: X signifies that input can be either a "1" or "0".

## Pin Descriptions

PIN NUMBER	SYMBOL	DESCRIPTION
1	BHB	B High-side Bootstrap supply. External bootstrap diode and capacitor are required. Connect cathode of bootstrap diode and positive side of bootstrap capacitor to this pin.
2	BHI	B High-side Input. Logic level input that controls BHO driver (Pin 16). BLI (Pin 3) high level input overrides BHI high level input to prevent half-bridge shoot-through, see Truth Table. DIS (Pin 8) high level input overrides BHI high level input. The pin can be driven by signal levels of 0V to 15V (no greater than $V_{DD}$ ).
3	BLI	B Low-side Input. Logic level input that controls BLO driver (Pin 14). If BHI (Pin 2) is driven high or not connected externally then BLI controls both BLO and BHO drivers, with dead time set by delay currents at DEL (Pin 5). DIS (Pin 8) high level input overrides BLI high level input. The pin can be driven by signal levels of 0V to 15V (no greater than $V_{DD}$ ).
4	ALI	A Low-side Input. Logic level input that controls ALO driver (Pin 13). If AHI (Pin 7) is driven high or not connected externally then ALI controls both ALO and AHO drivers, with dead time set by delay currents at DEL (Pin 5). DIS (Pin 8) high level input overrides ALI high level input. The pin can be driven by signal levels of 0V to 15V (no greater than $V_{DD}$ ).
5	DEL	Turn-on DELay. Connect resistor from this pin to $V_{SS}$ to set timing current that defines the dead time between drivers. All drivers turn-off with no adjustable delay, so the DEL resistor guarantees no shoot-through by delaying the turn-on of all drivers. The voltage across the DEL resistor is approximately $V_{DD} - 2V$ .
6	$V_{SS}$	Chip negative supply, generally will be ground.
7	AHI	A High-side Input. Logic level input that controls AHO driver (Pin 10). ALI (Pin 4) high level input overrides AHI high level input to prevent half-bridge shoot-through, see Truth Table. DIS (Pin 8) high level input overrides AHI high level input. The pin can be driven by signal levels of 0V to 15V (no greater than $V_{DD}$ ).
8	DIS	DISable input. Logic level input that when taken high sets all four outputs low. DIS high overrides all other inputs. When DIS is taken low the outputs are controlled by the other inputs. The pin can be driven by signal levels of 0V to 15V (no greater than $V_{DD}$ ).
9	AHB	A High-side Bootstrap supply. External bootstrap diode and capacitor are required. Connect cathode of bootstrap diode and positive side of bootstrap capacitor to this pin.
10	AHO	A High-side Output. Connect to gate of A High-side power MOSFET.
11	AHS	A High-side Source connection. Connect to source of A High-side power MOSFET. Connect negative side of bootstrap capacitor to this pin.
12	$V_{DD}$	Positive supply to control logic and lower gate drivers. De-couple this pin to $V_{SS}$ (Pin 6).
13	ALO	A Low-side Output. Connect to gate of A Low-side power MOSFET.
14	BLO	B Low-side Output. Connect to gate of B Low-side power MOSFET.
15	BHS	B High-side Source connection. Connect to source of B High-side power MOSFET. Connect negative side of bootstrap capacitor to this pin.
16	BHO	B High-side Output. Connect to gate of B High-side power MOSFET.

### **Revision History**

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to the web to make sure that you have the latest revision.

<b>DATE</b>	<b>REVISION</b>	<b>CHANGE</b>
September 30, 2015	FN3676.5	Updated the Ordering Information Table on page 2. Added Revision History and About Intersil sections.

### **About Intersil**

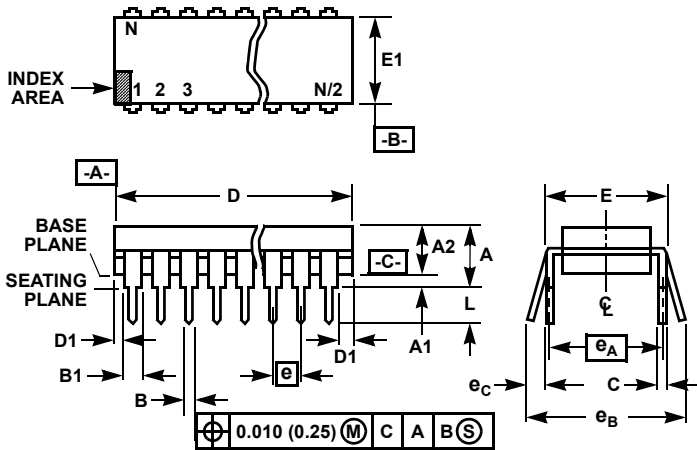

Intersil Corporation is a leading provider of innovative power management and precision analog solutions. The company's products address some of the largest markets within the industrial and infrastructure, mobile computing and high-end consumer markets.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at [www.intersil.com](http://www.intersil.com).

You may report errors or suggestions for improving this datasheet by visiting [www.intersil.com/ask](http://www.intersil.com/ask).

Reliability reports are also available from our website at [www.intersil.com/support](http://www.intersil.com/support).

Dual-In-Line Plastic Packages (PDIP)

NOTES:

1. Controlling Dimensions: INCH. In case of conflict between English and Metric dimensions, the inch dimensions control.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication No. 95.
4. Dimensions A, A1 and L are measured with the package seated in JEDEC seating plane gauge GS-3.
5. D, D1, and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch (0.25mm).
6. E and  $e_A$  are measured with the leads constrained to be perpendicular to datum -C-.
7.  $e_B$  and  $e_C$  are measured at the lead tips with the leads unconstrained.  $e_C$  must be zero or greater.
8. B1 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 inch (0.25mm).
9. N is the maximum number of terminal positions.
10. Corner leads (1, N, N/2 and N/2 + 1) for E8.3, E16.3, E18.3, E28.3, E42.6 will have a B1 dimension of 0.030 - 0.045 inch (0.76 - 1.14mm).

**NOTES:**

1. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. "L" is the length of terminal for soldering to a substrate.
7. "N" is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
