

1 Amp SOLID STATE RELAYS

DEVICES

MHS2501 Series
(Consult Table 3 for Part Number Designations)

LEVELS AVAILABLE

COTS
CLASS H
CLASS K

FEATURES

- Operates from 3.3V to 5V logic levels
- Internal Switch rated for 175°C T_j
- 250V Operation (Note 1)
- Total dose capable > 300 Krads (Note 3)
- > 1000V of I/O isolation
- Buffered input
- Inputs protected against over voltage (ESD rating of 1C)
- Preliminary SE results show no SEB through an LET of 85 (MeV / (mg / cm²)) at a fluence of 2e⁶ ions / cm²

DESCRIPTION:

The MHS series are Solid State Relays where the input and output circuitry are isolated from each other. The series consists of singles, duals, quads, and octals, and provides the normally open (N.O.) function. Microsemi Solid State Relays are designed for Space Flight Applications, and come packaged in a variety of hermetic configurations. These units have buffered logic level inputs and can be controlled from 3.3V or 5V logic signals, thus providing greater flexibility of design.

NOTE:

- (1) Internal switch is rated for > 1000 Volts breakdown. Consult factory for use at Voltages greater than 250 Volts.
- (2) Current handling capability depends upon allowable Tcase and allowable Tj. See Figure 1.
- (3) Microsemi does not at this time have a MIL-PRF-38534 qualified radiation hardness assurance program.
- (4) Guaranteed by design.
- (5) Because of the relatively slow switching times involved in power SSRs, it is important to stay within the allowances of the performance curves.
