Description

The MC10H121 is a 4-Wide OR-AND/OR-AND-INVERT Gate. This device is a member of Monolithic Memories' new ECL family. This ECL 10KH part is a functional/pinout duplication of the standard ECL 10K family part with 100% improvement in propagation delay, and no increase in power-supply current.

Note: Each ECL 10KH series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 50Ω resistor to -2.0 V.
