

To all our customers

Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.)

Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

MITSUBISHI MICROCOMPUTERS

M35017-XXXSP/FP

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DESCRIPTION

The M35017-XXXSP/FP is a TV screen display control IC which can be used to display information such as program schedules, the data and messages on the TV screen.

It uses a silicon gate CMOS process and M35017-XXXSP is housed in a 20-pin shrink DIP package, M35017-XXXFP is housed in a 20-pin shrink SOP package.

For M35017-001SP/FP that is a standard ROM version of M35017-XXXSP/FP respectively, the character pattern is also mentioned.

FEATURES

- Screen composition 24 columns X 10 lines
- Number of characters displayed 240 (Max.)
- Character composition 12 X 18 dot matrix
- Characters available 128 characters
- Character sizes available 4 (horizontal) X 4 (vertical)
- Display locations available
 - Horizontal direction 62 locations
 - Vertical direction 64 locations
- Blinking Character units
 - Cycle : approximately 1 second, or approximately 0.5 seconds
 - Duty : 25%, 50%, or 75%
- Data input By the serial input function
- Coloring
 - Background coloring (composite video signal)
- Blanking
 - Total blanking (14 X 18 dots)
 - Border size blanking
 - Character size blanking
- Synchronization signal
 - Composite synchronization signal generation (PAL, NTSC, M-PAL)
- Synchronized separation circuit Built-in
- 4 output ports (2 digital lines)
- Oscillation stop function
 - Be possible to stop the oscillation for display
- Exclusion function Built-in
- Built-in the oscillation for synchronized signal generation
- Reversed character display function
- Be possible to background coloring in superimpose (NTSC, PAL, M-PAL)
- Built-in polarity switching function at horizontal synchronized signal or vertical synchronized signal is input.

PIN CONFIGURATION (TOP VIEW)

Outline 20P4B

Outline 20P2Q-A

APPLICATION

TV, VCR, Camcorder

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

PIN DESCRIPTION

Pin Number	Symbol	Pin name	Input/Output	Function
1	OSC1	Pins for attachment of external oscillator circuit	Input	There are the pins for attaching an external display oscillator circuit. The standard oscillation frequency is approximately 7 MHz. This oscillation frequency determines the horizontal position of the display on the TV screen and the width of the characters.
2	OSC2		Output	
3	CS	Chip select input	Input	This is the chip select pin, and when serial data transmission is being carried out, it goes to "L". Hysteresis input. Includes built-in pull-up resistor.
4	SCK	Serial clock input	Input	When CS pin is "L", SIN serial data is taken in when SCK rises. Hysteresis input. Built-in pull-up resistor is included.
5	SIN	Serial data input	Input	This is the pin for serial input of data and addresses for the display control register and the display data memory. Hysteresis input. Includes built-in pull-up resistor.
6	AC	Auto-clear input	Input	When "L", this pin resets the internal IC circuit. Hysteresis input. Includes built-in pull-up resistor.
7	VDD2	Power pin	—	Please connect to +5 V with the analog circuit power pin.
8	CVIDEO	Composite video signal output	Output	This is the output pin for composite video signals. It outputs 2Vp-p composite video signals. In superimpose mode, character output etc. is superimposed on the external composite video signals from CVIN.
9	LECHA	Character level input	Input	This is the input pin which determines the "white" character luminance level in the composite video signal.
10	CVIN	Composite video signal input	Input	This is the input pin for external composite video signals. In superimpose mode, character output etc. is superimposed on these external composite video signals.
11	VSS	Earthing pin	—	Please connect to GND using circuit earthing pin.
12	P0	Port P0 output	Output	This pin can be toggled between port pin output and BLNK1 (character background) signal output.
13	P1	Port P1 output	Output	This pin can be toggled between port pin output and CO1 (character) signal output.
14	P2	Port P2 output	Output	This pin can be toggled between port pin output and BLNK2 (character background) signal output.
15	P3/PHIN	Port P3 output	I/O	This pin can be toggled between port pin output and CO2 (character) signal output. Superimposed colors on the PAL and M-PAL systems are controlled by the input terminal of the color burst select signal.
16	LP	Filter connection pin	Output	This pin connects filter circuit.
17	OSCIN	fsc input pin of oscillation circuit for generating the synchronization signal	Input	This is the subcarrier frequency (fsc) input pin for generating the synchronization signal (Note). This pin inputs the oscillation of 3.58 MHz at NTSC, 4.43 MHz at PAL and 3.58 MHz at M-PAL.
18	HOR	Horizontal synchronization signal input	Input	This pin inputs the horizontal synchronization signal. Hysteresis input.
19	VERT	Vertical synchronization signal input	Input	This pin inputs the vertical synchronization signal. Hysteresis input.
20	VDD1	Power pin	—	Please connect +5 V with the digital circuit power pin.

Note : Refer to Note for other (Note for fsc signal input).

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

MEMORY CONSTITUTION

Address 00₁₆ to EF₁₆ are assigned to the display RAM, address

F0₁₆ to F8₁₆ are assigned to the display control registers.

The internal circuit is reset and all display control registers (address

F0₁₆ to F8₁₆) are set to "0" and RAM is erased when the AC pin level is "L".

		1	Do not set															
5	STOP1	①	Oscillation of OSC1, OSC2 for display.		OSC1 and OSC2 oscillation switching. To stop the oscillation, set CS pin to "H" level and DSPON (address F816) to "0".													
		1	Stop the oscillation OSC1, OSC2 for display.															
6	CONT7F	①	Normal write mode.		Usually "0" fix. Writing mode of the serial data input switching.													
		1	Continuously writing mode (character code 7F16)															
7	DSPON	①	Display OFF		Display can be altered.													
		1	Display ON															

Notes 1 : The mark ① around the status value means the reset status by the "L" level is input to $\overline{AC}$ pin.

2 : Cut off video signal input from the exterior at the outside of IC when internal synchronous mode.
Leakage of input video signal from the exterior is able to be evaded.

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DISPLAY FORMS

M35017-XXXSP/FP has the following four display forms as the blanking function, when CO1, BLNK1, CO2, and BLNK2 are output.

- (1) Blanking OFF : Blanking output signal (BLNK) is cut off.
- (2) Character size : Blanking same as the character size.
- (3) Border size : Blanking the background as a size from character.

- (4) Matrix-outline size : Blanking the background as a size from all character font size (14 × 18 dots).

This display format allows each line (from the first line to the tenth line) to be controlled independently, so that two kinds of display formats can be combined on the same screen.

Fig. 3 Display forms at each display mode

EXCLUSION FUNCTION

For M35017-XXXSP/FP, the function expansion that is set with the EXP1 and EXP0 registers (DA3 and DA2 of address F516) is performed when "1" is set to DA7 of display RAM (EXP bit).

Table1 Display form of M35017-XXXSP/FP

Register		Display form
EXP1	EXP0	
0	0	Normal character+Blinking
0	1	Reversed character (no blinking)
1	0	Normal character+Exclusion
1	1	Reversed character+Exclusion

The figure 4 and 5 show the display examples using ports P0 to P3 (digital output).

Fig. 4 Display example using ports P0(BLNK1) and P1(CO1)(display line)

Fig. 5 Display example using ports P2(BLNK2) and P3(CO2)(record line)

DATA INPUT EXAMPLE

Data of display RAM and display control registers can be set by the serial input function. Example of data setting at M35017-XXXSP/FP is shown in Figure 6.

No.	Memory Contents		DA 7	DA 6	DA 5	DA 4	DA 3	DA 2	DA 1	DA 0
	Address/Data	Addition								
1	Address F8 ₁₆	Display OFF	1	1	1	1	1	0	0	0

Fig. 6 Example of data setting by the serial input function

SERIAL DATA INPUT TIMING

- (1) Serial data should be input with the LSB first.
- (2) The address consists of 8 bits.
- (3) The data consists of 8 bits.
- (4) The 8 bits in the SCK after the $\overline{CS}$ signal has fallen are the address, and for succeeding input data, the address is incremented every 8 bits.

Fig. 7 Serial input timing

CONT7F FUNCTION

When the register CONT7F (DA6 of address F816) is set to "1" and data input as the timing shown in Figure 8, the character code 7F16 (blank) can be set to display RAM automatically. However, be necessary to set the hold time.

While this function is operating, never stop the display oscillation OSC1 and OSC2, and set the register STOP1 (DA5 of address F816) to "0".

Fig. 8 CONT7F functional timing

CHARACTER FONT

Images are composed on a 12 × 18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.

Fig. 9 Character font and border

Character code 7F16 is fixed as blank, without a background.

TIMING REQUIREMENTS ($T_a = -10\text{ }^{\circ}\text{C}$ to $+70\text{ }^{\circ}\text{C}$, $V_{DD} = 5 \pm 0.25\text{ V}$, unless otherwise noted)

Serial data input

Symbol	Parameter	Limits			Unit	Remarks
		Min.	Typ.	Max.		
$t_w(\text{SCK})$	SCK width	200	—	—	ns	See Figure 10
$t_{su}(\overline{\text{CS}})$	$\overline{\text{CS}}$ setup time	200	—	—	ns	
$t_h(\overline{\text{CS}})$	$\overline{\text{CS}}$ hold time	2	—	—	μs	
$t_{su}(\text{SIN})$	SIN setup time	200	—	—	ns	
$t_h(\text{SIN})$	SIN hold time	200	—	—	ns	
t_{word}	1 word writing time	5	—	—	μs

VIDEO SIGNAL INPUT CONDITIONS (VDD = 5 V, Ta = -10 to 70 °C, unless otherwise noted)

Symbol	Parameter	Test conditions	Limits			Unit
			Min.	Typ.	Max.	
VIN-SC	Composite-video signal input clamp voltage	Sync-chip voltage	—	1.5	—	V

Note for Supplying Power

(1) Timing of power supplying to $\overline{AC}$ pin

The internal circuit of M35017-XXXSP/FP is reset when the level of the auto clear input pin $\overline{AC}$ is "L".

This pin is hysteresis input with the pull-up resistor. The timing about power supplying of $\overline{AC}$ pin is shown in Figure 11.

Fig.11 Timing of power supplying to $\overline{AC}$ pin

After supplying the power (V_{DD} and V_{SS}) to M35017-XXXSP/FP and the supply voltage becomes more than $0.8 \times V_{DD}$, it needs to keep V_{IL} time; t_w of the $\overline{AC}$ pin for more than 1ms.

(2) Power supply timing about V_{DD1} pin and V_{DD2} pin.

The power need to supply to V_{DD1} and V_{DD2} at a time, though it is separated perfectly between the V_{DD1} as the digital line and the V_{DD2} as the analog line.

PRECAUTION FOR USE

Notes on noise and latch-up

In order to avoid noise and latch-up, connect a bypass capacitor ($\approx 0.1 \mu F$) directly between the V_{DD} pin and V_{SS} pin using a heavy wire.

DATA REQUIRED FOR MASK ROM ORDERING

Please send the following data for mask orders.

- (1) M35017-XXXSP/FP mask ROM order confirmation form
- (2) 20P4B, 20P2Q-A mask specification form
- (3) ROM data (EPROM 3 sets)
- (4) Floppy disks containing the character font generating program + character data

Note for other

1. Note for when superimpose coloring mode

(1) Setting of register

Setting when superimpose coloring mode

Table 2. Setting when superimpose coloring mode

Register Broadcast system	PAL/NTSC	MPAL	EX	SCOR	State of P3/PHIN pin
NTSC	0	0	0	1	Output mode (Port output)
PAL	1	0	0	1	Refer to input mode (2)
M-PAL	0	1	0	1	Refer to input mode (2)

(2) Signal input to P3/PHIN pin

P3/PHIN pin is input pin when PAL, M-PAL mode by register setting written in Table 2.

Then, other registers are output mode (port output).

With PAL and M-PAL systems, it is necessary to input a control signal for alternating color burst phase (CB1, CB2) every other scanning line.

Signal input timing to P3/PHIN pin is shown in Fig 13.

Input to P3/PHIN pin is able to be polarity select by register PTD3.

Fig. 12 Vector phase when PAL, M-PAL mode

Fig. 13 Signal input timing to P3/PHIN pin

2. Note for when fsc-IN signal input

(1) This IC amplifies the fsc signal (3.58 MHz for NTSC and M-PAL, 4.43 MHz for PAL) input into the OSCIN terminal. Internally, it generates the composite video signal.

The amplified fsc signal can be destabilized in the following cases.

(a) When the fsc signal is outside of recommended operating conditions

(b) When the waveform of the fsc signal is distorted

(c) When DC level in the fsc waveform fluctuates

When the amplified signal is unstable, the composite video signal generated inside the IC is also unstable in terms of synchronization with the subcarrier and phase.

Consequently, this results in color flicker and lost synchronization when the composite video signal is generated. Make note of the fact that this may prevent a stable blue background from being formed.

(2) When switching to internal synchronization from external synchronization (fsc signal is OFF), start fsc signal input 20 msec or more before the internal oscillator circuit stabilizes.

Fig. 14 Example of Peripheral circuit

STANDARD ROM TYPE : M35017-001SP/FP

M35017-001SP/FP is a standard ROM type of M35017-XXXSP/FP.

The input/output polarity and character patterns are fixed to the contents of Table 3 and Figure 17 to 19.

Fig. 15 M35017-001SP/FP character patterns (1)
