DESCRIPTION

The SY10/100ELT23L are dual differential PECL-to-TTL translators with +3.3V power supply. Because PECL (Positive ECL) levels are used, only +3.3V and ground are required. The small outline 8-lead SOIC package and the low skew, dual gate design of the ELT23L makes it ideal for applications which require the tranlation of a clock and a data signal.

The ELT23L is available in both ECL standards: the 10ELT is compatible with positive ECL 10H logic levels, while the 100ELT is compatible with positive ECL 100K logic levels.

ABSOLUTE MAXIMUM RATINGS(1)

Symbol	Paramter	Value	Unit
V_{CC}	Power Supply Voltage	–0.5 to +7.0	V
V_I	PECL Input Voltage	0V to V_{CC}+0.5	V
V_O	Voltage Applied to Output at HIGH State	–0.5 to +5.5	V
I_O	Current Applied to Output at LOW State	Twice the Rated I_{OL}	mA

T_{amb}	Operating Temperature	–40 to +85	°C

NOTES:

1. Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to ABSOLUTE MAXIMUM RATING conditions for extended periods may affect device reliability.
