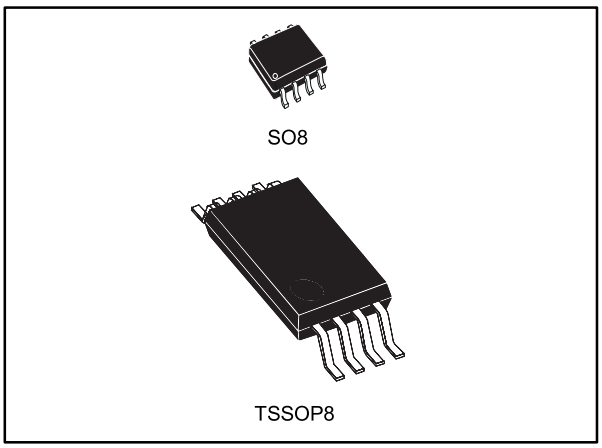
TL082, TL082A, TL082B

General purpose JFET dual operation amplifiers

Datasheet - production data



Description

The TL082, TL082A and TL082B are high speed JFET input dual operational amplifiers incorporating well-matched, high voltage JFET and bipolar transistors in a monolithic integrated circuit.

The devices feature high slew rates, low input bias and offset current, and low offset voltage temperature coefficient.

Features

- Wide common-mode (up to V_{CC}^{+}) and differential voltage range
- Low input bias and offset current
- Output short-circuit protection
- High input impedance JFET input stage
- Internal frequency compensation
- Latch up free operation
- High slew rate: 16 V/µs (typical)

This is information on a product in full production.

	MM: machine model (7)		200		V
	CDM: charged device model (8)		1500		

Notes:

(1)All voltage values, except differential voltage, are with respect to the zero reference level (ground) of the supply voltages where the zero reference level is the midpoint between V_{CC}^+ and V_{CC}^-.

(2)The magnitude of the input voltage must never exceed the magnitude of the supply voltage or 15 volts, whichever is less.

(3)Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.

(4)Short-circuits can cause excessive heating. Destructive dissipation can result from simultaneous short-circuit on all amplifiers.

(5)The output may be shorted to ground or to either supply. Temperature and/or supply voltages must be limited to ensure that the dissipation rating is not exceeded

(6)Human body model: 100 pF discharged through a 1.5 kΩ resistor between two pins of the device, done for all couples of pin combinations with other pins floating.

(7)Machine model: a 200 pF cap is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω), done for all couples of pin combinations with other pins floating.

(8)Charged device model: all pins plus package are charged together to the specified voltage and then discharged directly to the ground.
