Application Circuit Example

The fin on the bottom of HSOP-28H package and the fins between pins 7 and 8 and 21 and 22 should be grounded.

Usage Notes

1. VREF pin

Because the VREF pin is used as reference voltage input pin for the current setting, care must be taken to prevent noise from affecting the input.

2. GND pin

Because this IC switches large currents, the ground pattern must be designed with care. The fin on the bottom of the package and the fins between pins 7 and 8 and 21 and 22 should be grounded. Low-impedance patterns should be used in blocks where large currents flow, and these blocks should be separated from low-level signal blocks. In particular, the ground of the sense resistor RE at pin E should be located close to the IC ground. Pattern layout should be designed so that the capacitors between V_{CC} and ground and V_{BB} and ground are close to V_{CC} and V_{BB} .
